

Battery Testing with InnControl™

InnControl software provides the flexibility to configure battery testing rigs that meet your exacting requirements for motion and data acquisition.

Capable of hydraulic or electric actuator control and able to integrate with your facility and monitoring systems, adaptable to your customer's functional requests.

Innkeeper Test Systems allow you to build what you want to test what you need.

The **Axis>>12** servo controller provides open adaptation to your existing systems or implementation with new actuators. This closed loop system ensures that force and displacement accurately controlled, monitored and recorded.
