DATABAHN CORE·FMS the whole fleet in view

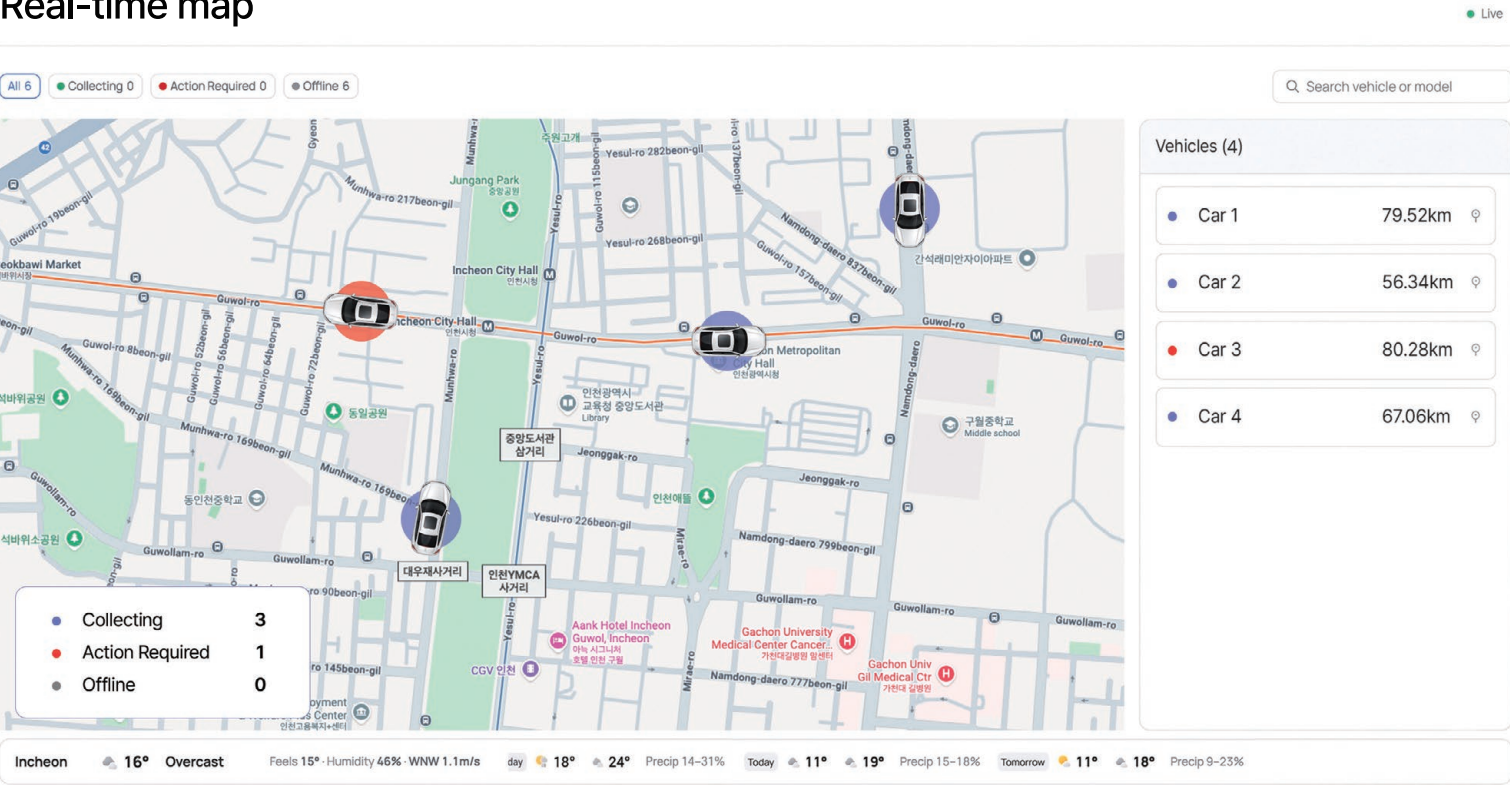

See every test vehicle and every logger while the campaign drives,
and catch a stopped recording in time to save the drive.

Know every logger is still recording long before the cars come home.

The Fleet Management System (FMS) in DataBahn Core puts the whole test fleet on one live dashboard, car by car and logger by logger.

On most campaigns, a stopped logger or a missed route only shows up at ingest, days later. With the FMS, each logger checks in over cellular on the road or Wi-Fi at the test track, so you see the fleet as it drives.

Real-time map

01

Where each vehicle is

Every vehicle on a live map, with its current speed.

02

Whether it's recording

Each logger shows as recording or idle, and one that's down or unhealthy gets flagged for action.

03

How far it has driven

Distance and time driven by each vehicle, next to the target you set.

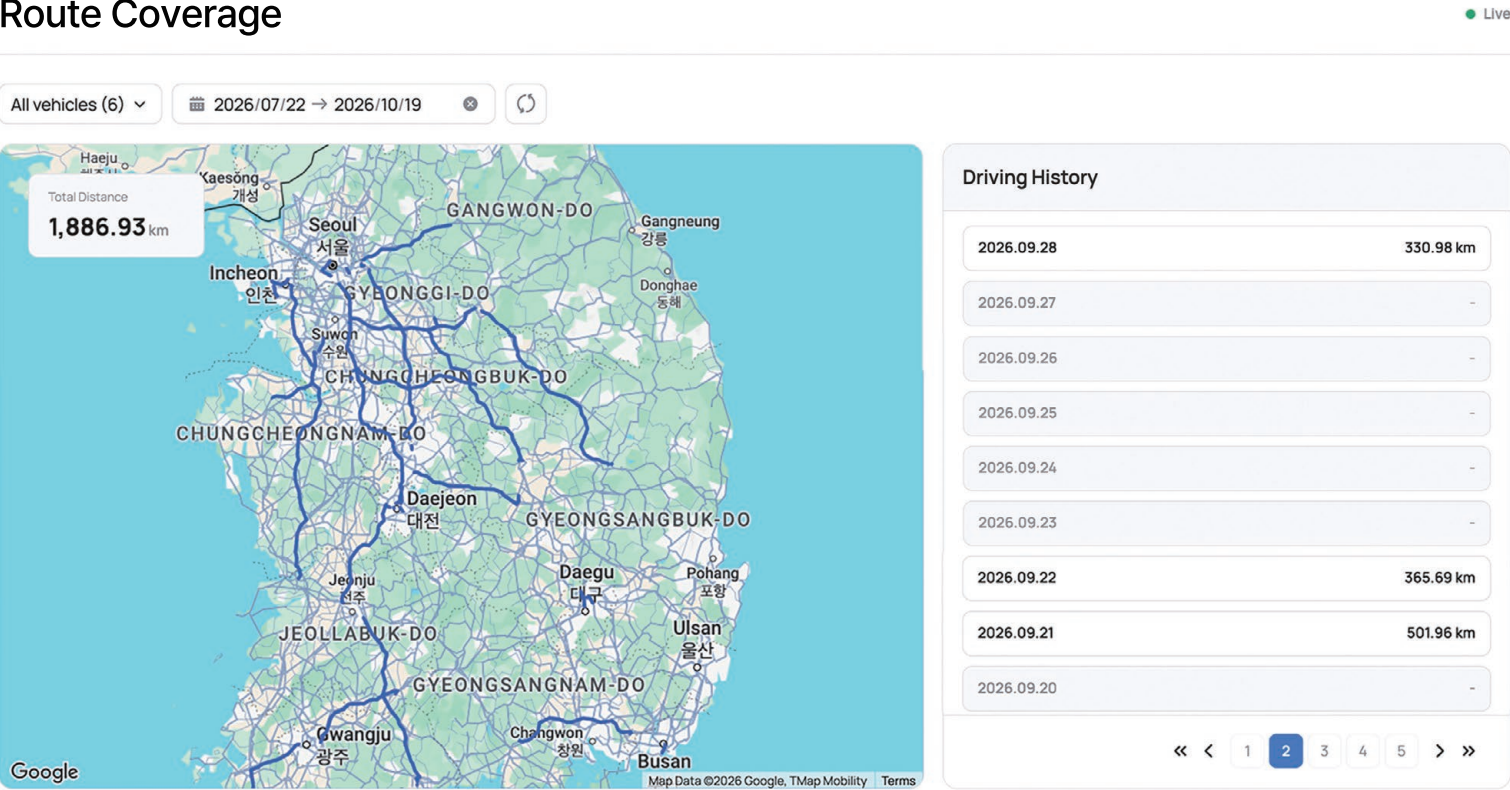

*A logger can only fail quietly when nobody is watching.
The FMS keeps an eye on every one of them, all campaign long.*

Plan tomorrow's drives on today's coverage.

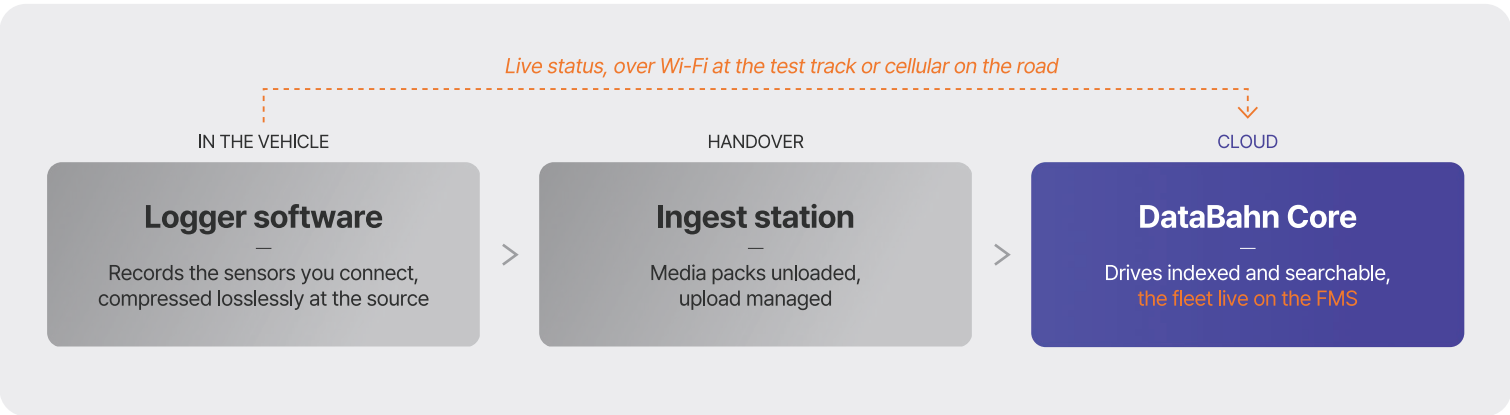

Route coverage traces every road the fleet has driven, listing each day's drives alongside the map.

A gap in the campaign shows up while there's still time to drive it. Mileage tells you which cars are ahead of plan, and every vehicle is listed with the logger fitted in it.

Route Coverage

One pipeline from sensor to cloud, and all of it in view.

DataBahn Core lives where your data is allowed to live, on your own servers, in your cloud or in one we host for you. The FMS is rolling out to a customer's production environment right now, and it's ready for new trials. We fit it on site, around our logger software or the logs you already keep.

The fleet view comes with the pipeline.
Start with the logger or the codec.

Ask about our logger software or a compression fitting,
and we'll show you the FMS running with it.
