ANALYTICS ENGINES SUCCESSFULLY COMPLETE SBRI PHASE I

Pharmacy staff optimization solution gets green light for deployment

Belfast, September 29, 2017– The Small Business Research Initiative for Medicines Optimisation launched by the Department of Health (DoH) and Department for Economy (DfE) in Northern Ireland have approved **PRECISION for Pharmacy** for deployment at Western Health NHS Trust.

Having successfully completed Phase I in developing a solution framework, Analytics Engines have been awarded the Phase II project to continue development into a hospital-wide deployment from Oct 2017 – Oct 2018.

> *"The Analytics Engines team worked closely with us, developed a clear understanding of our needs and delivered a fantastic application that will be invaluable to the team. This was achieved through collaborative and pro-active interaction throughout the process"* Brendan Moore, Clinical Pharmacy Development Lead, Western Trust

Pharmacy provides a unique and vital service in ensuring patient understanding of post-hospital care yet resourcing for this critical support is scarce. Resource allocation of pharmacy team resources across the entire hospital needs supporting data to demonstrate how timely intervention can prevent costly and dangerous adverse reaction.
