FOR IMMEDIATE RELEASE
March 16, 2018

PRECISION FOR PHAMRACY DEPLOYED AT WESTERN TRUST

Successful technical go-live

Belfast, March 16, 2018—**PRECISION for Pharmacy**, a teamplay application for the optimized deployment of staff and tasks in hospital pharmacy, has been successfully installed at Altnagelvin Hospital and integrated with the Trust-wide Patient Administration System (PAS).

The deployment is part of Phase II of an SBRI project to develop solutions that will provide Northern Ireland hospitals with the tools and support necessary to meet the recommendations of Medicines Optimisation: safe and effective use of medicines to enable the best possible outcomes NICE Guideline 5.

Tasks are auto-created based on Admission messages received from the PAS to help ensure that Medicines Reconciliation (MedRec) is performed within 24 hours of hospital admission. Similarly, patients ready for discharge are assigned a MedRec task for discharge, with a hospital goal of covering 100% of discharge MedRecs.

Brendan Moore and the pharmacy team at Altnagelvin Hospital have been continuing to work with Analytics Engines to deploy a smart solution addressing the specific challenge of deployment of clinical pharmacy staff in a targeted patient focused method within a hospital setting. The aim is to enhance patient care and support delivery of the Medicines Optimisation Quality Framework.

Clinical go-live is expected within a number of weeks to allow a field trial period of around 3 months.
