

Exagate unveils cutting-edge 2nd Generation Intelligent PDU

Exagate, a leading name in data center solutions, proudly announces the launch of its 2nd Generation Intelligent PDU, a groundbreaking advancement set to reshape power management in data centers. This innovative release is poised to deliver cutting-edge features, promising heightened efficiency and unparalleled performance.

The 2nd Generation Intelligent PDU is meticulously crafted to elevate data center power management, introducing advanced power quality monitoring to ensure that systems operate at peak performance levels. With state-of-the-art features, this new PDU facilitates seamless management and monitoring of energy distribution within data center cabinets.

A standout feature of this 2nd Generation Intelligent PDU is its user-friendly interface, which provides IT professionals with comprehensive control over the energy infrastructure. Additionally, the incorporation of optional environmental sensors further enhances its capabilities, enabling a holistic approach to data center management.

At the heart of this innovation is the new controller featuring an IPS LCD, boasting an extended lifespan and enhanced management capabilities. IT technicians can effortlessly access crucial information, and remote accessibility is streamlined through connections to Exagate's Smartpack.

Some key features of the 2nd Generation Intelligent PDU include:

- **Power Quality Monitoring:** Experience top-notch monitoring with ± 0.5 percent metering accuracy for optimal power quality, ensuring reliability and performance.
- **Versatile Options:** Choose from a range of PDU options, including up to 100A Single or Three-Phase configurations.
- **Security:** Benefit from the Integrated Unique Socket Locking System, enhancing the overall security of the data center infrastructure.
- **Operational Efficiency:** Streamline operations with Branch Circuit Assignment, optimizing energy distribution within the data center.
- **Safety Measures:** Enhance safety through Residual Current Monitoring (RCM), proactively identifying potential issues.

Exagate's 2nd Generation Intelligent PDU signifies a monumental leap forward in data center power management, seamlessly blending reliability, precision, and state-of-the-art features to address the evolving needs of modern data infrastructure.
