

XpoEquip

Equip, the perfect solution for effective exhibiting, offering a number of opportunities to enhance your presence.

Equip, a modular build system, allows any stand size to be created, providing multiple configurations using its poles, beams and panels - include your fascia nameboard, walls and carpet.

As shown in the image, the build includes a minimal ceiling grid providing rigidity. Ceiling beams are also used to attach lighting systems.

We suggest you use Command Strips or similar, to attach display materials to the shell scheme panels, as these will not damage the panels. Please ensure you do not affix anything to the metal structure. Any damage caused to the system will be charged to exhibitors.

Green to our Core

Sustainability is at the heart of everything we do. From carefully chosen reusable structures and materials to our disposal methods, we deliver solutions that are kind to the planet!

- 0% manufacturing waste goes to landfill
- 400 trees are planted by us every year
- 100% of our show flooring, packaging and cardboard is recycled
- 100% of our modular systems are continuously re-used
- 100% of our biomass waste heats our warehouse
- A member of Event Cycle, taking unwanted exhibition waste which are then repurposed and reused

The lifecycle of a stand

- Our modular systems and foamex walling are returned to stock and reused for future events
- At the end of its lifecycle, foamex panels are cut down for use as fascia, or nameboards and then recycled
- Ink used to print our nameboards is non solvent based
- All carpet laid is recycled after every event

Panel A
Visible Area = 455mm x 2340mm
Cut Size = 469mm x 2354mm

Panel B
Visible Area = 950mm x 2340mm
Cut Size = 964mm x 2354mm
