Our aim: West Hampshire Community Diabetes Service

To ensure all people with diabetes have **access** to excellent skills and knowledge so they can **achieve** their individual goals and become **active** participants in their care whenever possible

Active participants

Achieve individual goals

Access to excellent skills & knowledge

Patients & people first

Partnership

Respect

Aims:

➡ Inspire you to review glucose data with your patients

➡ 4 – STEP guide to reviewing AGP

➡ Signpost to further learning resources

How do we monitor glucose levels in diabetes?

HbA1c

How sugary your red cells got in 3 months

Blood glucose

What's happening now

Time in Range (TIR) & glucose goals achieved

Flash glucose monitoring
Interstitial glucose plus trend
with element of continuous glucose monitoring

OUR VALUES

Patients & people first

Partnership

Review of results from patients using Freestyle Libre device under NHS funding

Since NHS funding for the Libre device became available in 2018, 31 WHCDS patients have used Libre for at least 6 months.

- 13 (42%) were male and 18 (58%) were female, with an average age of 47 years (range 22 to 79 years)
- 27 (87%) of these people have attended formal type 1 education (one of the criteria for accessing this technology)

OUR VALUES

Change in HbA1c at 6 months

The average HbA1c among these people fell from 64 mmol/mol at baseline to 59 mmol/mol after 6 months of using Libre.

Comments

- Gaps found in the insulin data, 14 days in this reporting period have no recorded insulin events.
- Gaps found in food data, 14 days in this reporting period have no recorded food events.

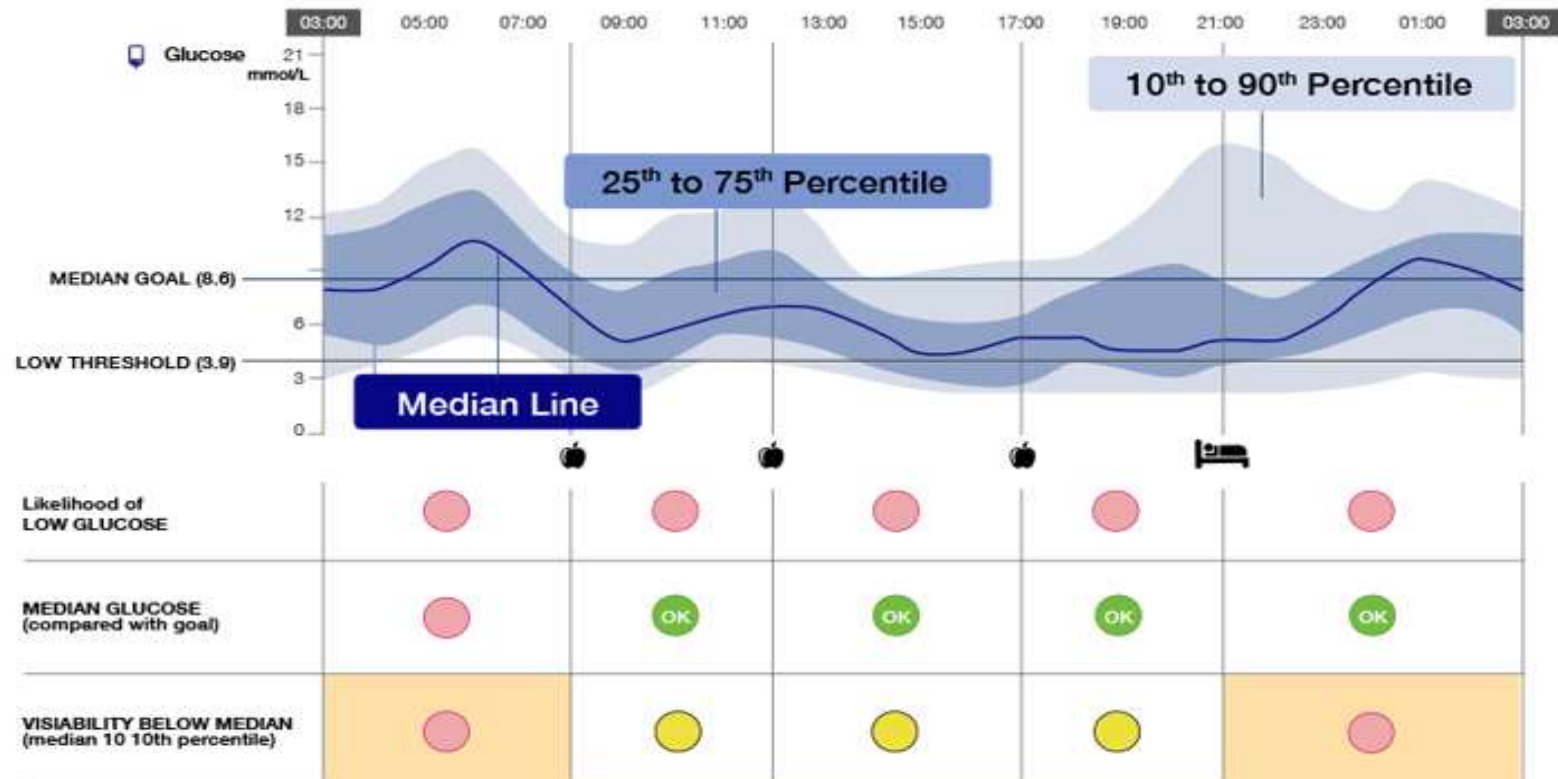

Glucose Pattern Insights

12 January 2014 - 24 January 2014 (15 days)

LOW-GLUCOSE ALLOWANCE SETTING: Medium

MEDIAN GOALSETTING: 8.6 mmol/L (A1c: 7.0% or 53 mmol/mol)

Estimated A1c **6.2% or 44 mmol/mol**

VARIABILITY BELOW MEDIAN | HIGH!

This makes it difficult to achieve the median glucose without increasing the likelihood of low glucose.

Median Line

- $2+3+4+6+15=30/5 = 6$
- Mean is 6
- Median is 4

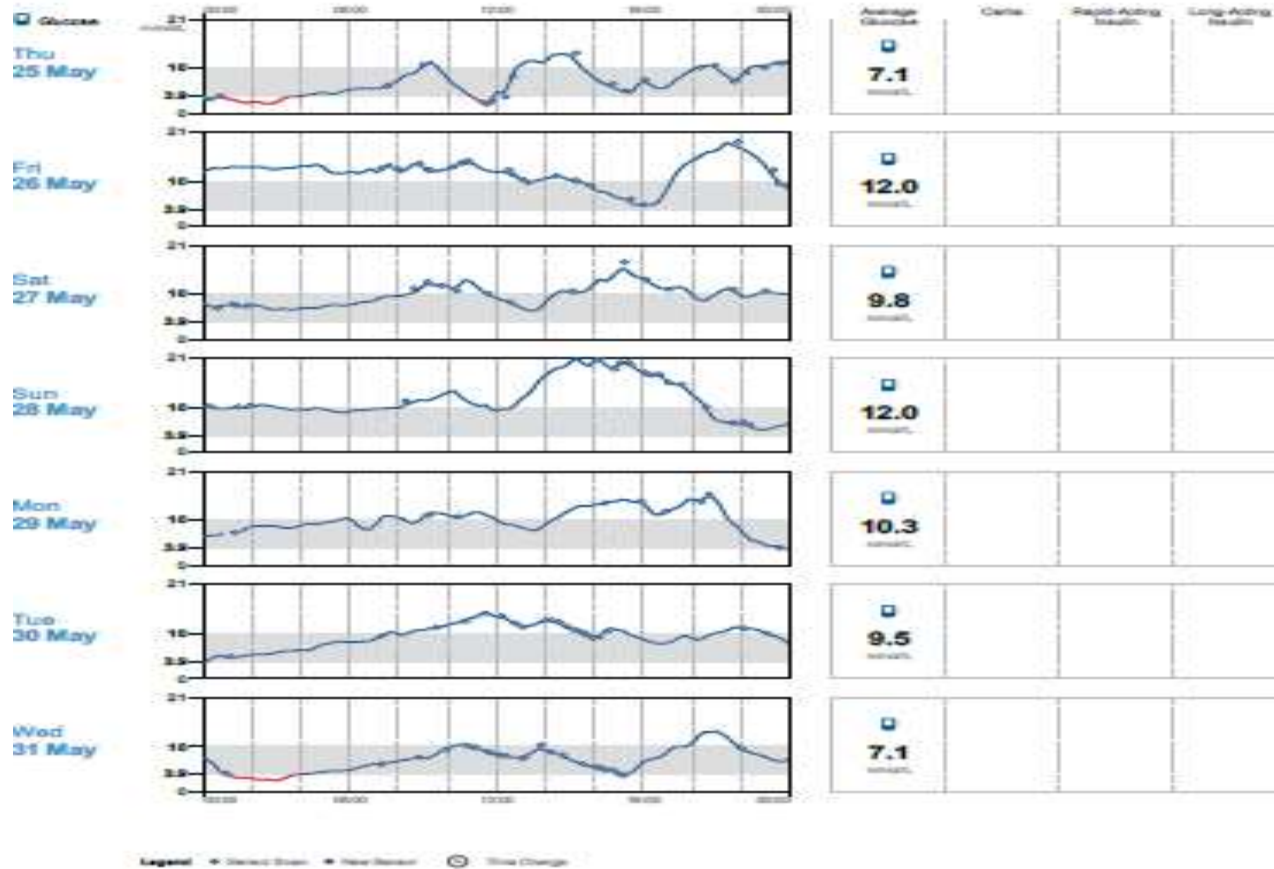

- The effect of using a median means that outliers have less of an effect

MEDIAN GLUCOSE Compared to goal	OK	OK	OK	OK	OK
VARIABILITY BELOW MEDIAN Median to 10th percentile	OK	OK	OK	OK	OK

VARIABILITY BELOW MEDIAN IS HIGH This means it is difficult to achieve the median glucose goal without increasing the likelihood of low glucose. Factors that could contribute to variability below median:

- ☐ Exercise diet
- ☐ Incorrect or missed medication
- ☐ Alcohol consumption
- ☐ Variations in activity level
- ☐ Stress

Settings LOW GLUCOSE ALLOWANCE SETTING 3.9 mmol/L (A1c: 7.0%, or 53 mmol/mol)
