The Dental Technology Showcase 2015 - IT'S SHOWTIME

Presenting first-class education, an outstanding speaker line-up, the very latest innovations and a buzzing atmosphere, the Dental Technology Showcase (DTS) 2015 is almost here!

Among the many highlights will be the impressive trade floor, offering free access to over 100 leading lab-dedicated manufacturers and suppliers from the UK and abroad. These will include some of the biggest names in the industry today including 3M ESPE, 3Shape, Schottlander, Metrodent, Cendres+Métaux, Ivoclar Vivadent, GSK, Henry Schein, Nobel Biocare, Sirona, GC UK, Bracon, and Straumann.

Following global product launches at IDS Cologne, the new and exciting Launchpad UK will present your first chance to see the very latest materials and technologies available in the UK. Discover innovations designed to streamline your daily processes and enhance the quality of products created, ensuring the utmost satisfaction from both your clients and their patients.

The trade floor will also be the perfect place to network, enabling you to create and develop the widespread professional relationships you need to promote and grow your business. With The Dentistry Show running alongside DTS once again, and more than 7,500 delegates expected, there will even more networking opportunities than ever before.

For those looking to update, refresh and advance their knowledge and skills across a wide range of technical and business areas, the two-day educational programme won't disappoint. National and international professionals will share their extensive knowledge, including Steve Taylor, John Wibberley, Jonathan Bill, Sascha Hein, Vanik Jinoian, Xabier Egurbide and Peter Fairbairn, speaking throughout the

Lecture Theatre, Practical Theatre and ADI Implant Theatre. Bringing you and your team to the very cutting-edge of the industry, sessions will offer up to 10 hours of vCPD and cover everything from implant-retained dentures to occlusion, all ceramic restorations and bio-emulation.

DTS is also opening a brand new CAD/CAM Theatre, providing insight into the best technologies currently available. Sessions will be led by leading suppliers such as 3Shape, Nobel Biocare and BEGO with experts offering guidance on the endless possibilities achievable when digital technologies are fully utilised.

Comments from DTS 2014 visitors included:

"We have thoroughly enjoyed the lectures... such good content for free." Vivienne Smith, Hospital Dental Technician.

"You always learn something when you come to the DTS." Martin Ellis, Laboratory Owner/ Dental Technician, West Sussex

"My team came to DTS to look at what is happening with CAD/CAM and digital impressions to see how much it is taking off because it is set to revolutionise everything." Ian Hammerton, Laboratory Owner, Hinckley

As the Dental Laboratory Association's (DLA) flagship event, DTS 2015 will share your passion for high quality dentistry, offering numerous ways for you and your team to enhance your technical work and build your business. With world-class education and training, CPD, networking and the chance to attend the prestigious Dental Awards 2015, there really is something for everyone.

AT THE FOREFRONT OF DENTAL TECHNOLOGY

Chairman of the educational programme at the Dental Technology Showcase (DTS) 2015 will be CDT Steve Taylor DipPS (Implantology), Fellow of the British Institute of Dental & Surgical Technologists

(BIDST) and owner of Taylor Dental Technology Centre in Leyland. With more than 25 years' of experience to draw on, Steve understands the demands placed on modern technicians and laboratory owners, and will be helping to shape the 2015 lecture programme to suit your needs.

Steve provides a taster of what delegates can expect:

"It was an honour to be asked to Chair the educational programme for DTS 2015," he says. "DTS is a great event because it is designed specifically for the modern dental technician and lab owner. Lectures and practical demonstrations have always been informative and relevant – the programme is created by and delivered by technicians, for technicians. There is always a pearl of wisdom to be had!"

"For 2015, we are hoping to build on the success of previous years, presenting a programme that is as informative and up-to-date as possible. An effective blend of topics will be covered, from implants to crown and bridge work, dentures and orthodontic appliances, ensuring there is something for everyone."

AT THE FOREFRONT OF DENTAL TECHNOLOGY

Continued from front page...

DTS 2015 will provide the opportunity to explore different areas of modern dental technology, including tips for enhanced teamwork and introductions to new products and equipment. Aside from the two-day conference programme and CPD opportunities, the extensive trade exhibition will host more than 100 leading dental suppliers and manufacturers including 3Shape, Cendres + Metaux, Nobel Biocare, Straumann, Metrodent, Ivoclar Vivadent and Schottlander to name but a few. Each demonstrating the latest products, materials and technologies available, experts will be on hand to provide any information or advice you may need, helping you to choose the most suitable equipment for optimal clinical results, streamlined workflows and maximum return on investment.

With more than 1,800 dental technicians, clinical dental technicians and lab owners expected to attend, this will also be the perfect place to meet old friends and new.

As Steve concludes, this is one event truly designed for you and your team:

"The biggest benefit of attendance will be the exposure to new technologies. Held in a convenient location, DTS 2015 also provides a concentrated exhibition and lecture programme so that technicians can make efficient use of their time. The event is designed in the best interests of dental technicians and laboratory owners, and it is important that the industry is represented and supported in this way."

THE DLA WELCOME YOU TO THE DENTAL TECHNOLOGY SHOWCASE 2015

Promoting British
Dental Technology

Another year has rolled around, and once again the DLA are delighted to be working with CloserStill Media to deliver what looks to be the biggest and best DTS exhibition and conference to date.

It's our aim to make sure DTS offers something for everybody. Just take a look through this newspaper, and I'm sure you will find something – if not several things – of interest to you. This year we have several exciting new developments on show at DTS: many of your suppliers are presenting brand new products and services, there are international manufacturers, and some new companies based here in the UK will even be getting involved. Not only is all of this offered for free, but you also get access to an extensive range of seminars which count towards your verifiable CPD.

Throughout 2014 and since the beginning of this year, the DLA has been busy as usual with developments to support dental laboratories and dental technicians in the UK. Our British Bite Mark campaign is continuing to spread its message far and wide, educating dentists and the wider general public about the importance of knowing where our custom-made dental appliances come from and the benefits of supporting home-grown British labs.

The DTS exhibition this year is not to be missed and let's not forget it's also here to assist you as an individual technician or laboratory owner, so no matter how small or niche your business may be, don't hesitate to speak to us about how we can support you at future events.

On behalf of the DLA and everybody involved with the Dental Technology Showcase who work so hard to make it happen, we look forward to seeing you at the NEC on the 17th and 18th April.

Jonathan Bill
President, Dental Laboratories Association

GET INSPIRED AT THE DENTAL TECHNOLOGY SHOWCASE

John Wibberley, world-class dental technician and renowned educator, will be speaking at The Dental Technology Showcase 2015. His talk is one of many that are likely to inspire and motivate you, giving you new ideas and perspectives to succeed in your profession.

In an increasingly competitive market, our lives can revolve around work, so it is paramount that we spend those working hours in a state of happiness. When a person enjoys their job, they work harder, longer and more successfully. It is human nature to seek out the things we love and try to prolong that enjoyment for as long as we can. People who are passionate about their job employ maximum effort to achieve their goals; they are more productive and often become more successful in their field.

Individuals who love their job are able to meet challenges with enthusiasm to reach their full potential and, as we spend a relatively long time at work, they enjoy a better quality of life. When a job is a passion it empowers the motivation, enthusiasm and energy of an individual, which leads to confidence and strength. Similarly if a person has a specialised interest, talent or flair that brings them pleasure in their work, they are able to enjoy success and often recognition.

One such man is John Wibberley who is widely considered to be one of the most experienced dental technicians in the UK, working alongside many of the countries leading implant dentists. With his wealth of experience and knowledge of commercial laboratories, John is also the managing director of the award-winning Waters Edge Ceramic Dental Laboratory where 19 full time dental technicians specialise in implantology and high quality restorations.

John is very passionate about the subject and has been running dental technician courses and lecturing for over 20 years around the world, including the Association of Dental Implantology and British Academy of Aesthetic Dentistry.

John has also spent some time on the board of the Dental Laboratories Association as Director of Education helping to develop dental technology training and education. He believes in a formal training system for dental technicians but one that provides the correct balance between academic and vocational skills so that talented individuals are not discouraged from taking up the profession.

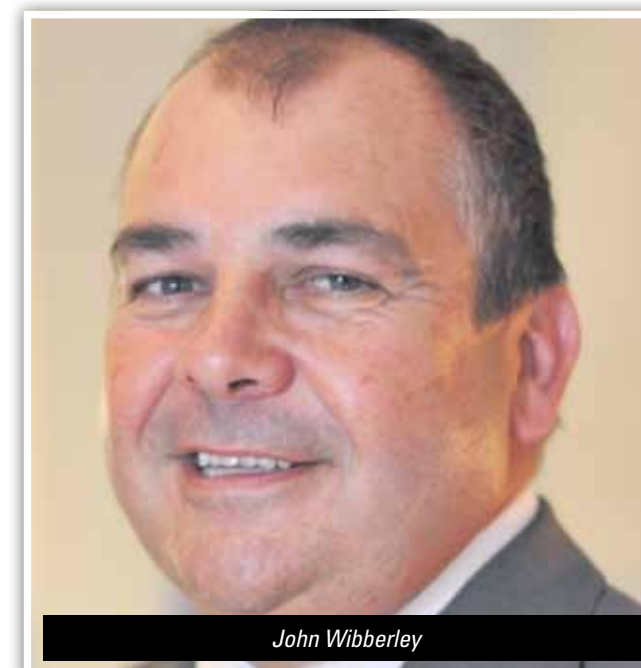

As recognition for all his hard work and his positive influences to the industry John was awarded with the title of Fellow of the British Institute of Dental and Surgical Technologists in 2005. This year John is lecturing at the Dental Technology Showcase on Friday the 17th of April in the Lecture Theatre at 11.45am. He will present 'Implant Retained Dentures and Denture Stabilisation' as part of the two-day educational programme. He recently spoke about his lecture:

"There are various materials available today to address the patient's aesthetic and functional needs. The advantages and disadvantages of these materials will be discussed, as without a systematic approach with good communication, the end result is sometimes a huge disappointment for the technician, clinician and the patient."

John aims to give technicians an insight into material selection and processing and will present and discuss three cases:

1. Fixed full dentures with two locator attachments in the lower denture: examining the choice of materials used and the techniques to produce high aesthetic results.
2. Milled bar over denture: discussing the choice of materials used and the techniques required to produce a high quality result.
3. Fixed All-on-4® restoration: considering the treatment planning, immediate loading and the final restoration.

This is a great opportunity for the whole dental team to benefit from John Wibberley's experience and outstanding knowledge. The Dental Technology Showcase will also feature

John Wibberley

an array of other nationally and internationally renowned speakers at the leading edge of their profession, providing dedicated and informative verifiable CPD sessions for DTs and CDTs. Attendees can also visit the Practical Theatre to watch live demonstrations and innovative techniques as well as the Technicians Workshop where they will have the chance to try new materials and gain hands-on experience.

New for 2015 will be Launchpad UK, providing delegates with the chance to see the latest products, technology and materials available in the UK dental industry. To take full advantage of the visit, attendees can register to receive updates and details of the manufacturers and suppliers exhibiting so they can plan their time at the showcase more effectively.

Dental Technology Showcase 2015 promises to be a worthwhile destination this year with an extensive programme of events to enlighten, enthuse and enhance the passion of technicians, clinical dental technicians and laboratory owners. There will also be opportunities to network and socialise for every member of the team so don't miss it.

CAD/CAM – ALL THE VERY LATEST AT DTS 2015

No longer a new concept in dentistry, digital workflow has evolved as more companies are offering tried and tested solutions designed specifically for dental laboratories.

Following so many exciting developments, it's no wonder this is one of the hottest topics in dentistry right now. In fact, of the 1,600 dental technicians, CDTs and lab owners who attended the Dental Technology Showcase (DTS) 2014, 50% were already searching for CAD/CAM solutions to suit them.

To this end, DTS 2015 will provide the perfect platform for you to delve further into the world of CAD/CAM. Within the extensive trade show you will find everything you need to adopt new technologies or enhance your current digital capabilities. From scanners of all prices and sizes to software, milling machines, 3D printers, lasers and consumables, there is a huge amount of free knowledge to be gained, as well as the opportunity to get hands-on with the vast array of equipment and materials available. Among more than 40 exhibiting companies offering CAD/CAM will be 3M ESPE, 3Shape, Amann Girrbach, Attenborough Dental, Bego, Bristol CAD/CAM, Carestream Dental, Consilio3D, Delcam, Doceram, GoPrint3D, Ivoclar Vivadent, LMI Technologies, Nobel Biocare, Laser Lines, Panadent, Renishaw, Sagemax, Schottlander, Sirona, Smart Optics, Straumann, Techceram, ZFX, Zirkonzahn and many more representing hundreds of products!

What's more, the two-day educational programme at DTS will provide further insight into the modern digital workflow, with leading speakers exploring the intricacies of today's CAD/CAM technologies both in the Lecture

“AS WITH ANY INVESTMENT, THE RETURN ACHIEVED IS AN IMPORTANT ASPECT TO THINK ABOUT EVEN BEFORE PURCHASE”

Theatre and brand new CAD/CAM Theatre. Sessions will be presented by Stephen Green, Vanik Jinoian, John Wibberley, Morten Ryde Holm-Hansen, Dave Woolridge, Xabier Egurbide, Gianni Storni and many more. They will cover everything from the construction of orthodontic appliances to how legislation and trends are going to affect how we treat patients of the future, as well as how CAD/CAM can be utilised alongside existing practices for enhance outcomes. You'll also have the chance to witness the smooth workflow achievable with digital workflows live on stage, explore the endless designing possibilities of CAD/CAM and learn more about the critical steps needed to ensure accuracy for complex screw retained restorations.

As Stephen Green says:

“A one-man lab may not require the same technologies as a large operation, and it's important to choose the most appropriate piece of equipment for the business. As with any investment, the return achieved is an important aspect to think about even before purchase.”

For information and advice on the very latest CAD/CAM solutions, as well as a huge choice of technology, education and training, don't miss DTS 2015. There really is something for everyone!

Don't miss out on all this FREE vCPD education, register online at www.the-dts.co.uk/showtime

CAD/CAM Theatre

New for 2015 the CAD/CAM Theatre hosts a variety of speakers from home and abroad, experts in the field of digital dentistry. The Theatre has been designed to create an intimate environment to interact with and gain the most from the speakers.

A great opportunity to find out where dental technologies are heading, the impact on the dental laboratory and how to integrate into and alongside existing working practices.

FRIDAY 17TH APRIL

10:00 - 11:00		Joining Clinics and Labs in Complete Digital Workflows Morten Ryde Holm-Hansen, Clinical Dental Technician, 3Shape	
11:30 - 12:30		'The Bridge' - building a bridge between traditional handcraft and modern CAD/CAM technology! Ralf Oppacher, Master Dental Technician, Shera	
13:00 - 14:00		Dental Implantology - Total Oral Rehabilitation Manoj Vijayanarayanan, MBA, Technology Director, EvoDental Implant Centre	
14:30 - 15:30		CAD/CAM, a Level Playing Field? Dave Woolridge, Sales Manager UK, Bego GmbH	
16:00 - 17:00		New Digital Treatment Concepts in Implant Dentistry Dr Andrew Dawood, MRD RCS (Eng) MSc BDS, Founding Partner, Dawood-Tanner	

SATURDAY 18TH APRIL

10:00 - 11:00		Joining Clinics and Labs in Complete Digital Workflows Morten Ryde Holm-Hansen, Clinical Dental Technician, 3Shape	
11:30 - 12:30		CAD/CAM, a Level Playing Field? Dave Woolridge, Sales Manager UK, Bego GmbH	
14:30 - 15:30		Restorative Treatment Plan Options for Removable Prosthetics Utilizing CAD/CAM Technology and/or Traditional Wax Up Techniques Gianni Storni, Rhein 83	

For full details on the education streams, please visit www.the-dts.co.uk/conference

Schottlander will be presenting on-stand seminars and workshops, demonstrating all the latest skills, techniques and technologies.

STAND 42

Practical Theatre

The Practical Theatre hosts a series of at bench practical presentations of materials and techniques in a dedicated theatre on the show floor. These presentations and case studies will be to a theatre audience with live work projected onto a screen behind the presenter.

Sessions offer the chance for technicians to learn first-hand how to implement aspects of the presentations into their day to day working practice.

FRIDAY 17TH APRIL	
10:00 - 11:00	 GC LiSi. The New Future Orientated Ceramic for Lithium Di Silicate Ceramics Ralf Dahl MDT, Managing Director MB Dental Technik, GC UK Ltd
11:45 - 13:00	 Screw Retained Solutions through CAD / CAM for Simple and Complex Cases Xabier Egurbide BBS, Internationalization Director, Createch Medical
13:15 - 14:00	 Industrial 3D Printing of Removable Partial Dentures, Crowns & Bridges & Dental Models Gregor Szwedka, Dipl. Ing. Dental Technology & CDT, Additive Manufacturing Consultant - Dental, EOS GmbH
14:30 - 15:30	 Denture Characterisation - Teeth and Pink Aesthetic Tomasz Dabrowski, Dental Technician, Lab Owner, Profilab s.c., Warsaw

SATURDAY 18TH APRIL	
13:15 - 14:00	 Clean Dentures - Not a Simple Solution. Helping Patients Maintain Their Dentures Dr David Attrill, BDS PhD FDS RCS(Ed) FDS RCS (Rest. Dent.) FHEA, Senior Lecturer and Hon. Consultant in Restorative Dentistry, University of Birmingham
14:30 - 15:45	 Screw Retained Solutions through CAD / CAM for Simple and Complex Cases Xabier Egurbide BBS, Internationalization Director, Createch Medical

Seminar Suites

FRIDAY 17TH APRIL	10:45 - 11:30 - Seminar Suite 2
SATURDAY 18TH APRIL	10:45 - 11:30 - Seminar Suite 3

--	--	---

COME FORTH INTO THE LIGHT OF THINGS, LET NATURE BE YOUR TEACHER.

William Wordsworth

Throughout existence, humans have learnt from nature to solve complex problems. Nature provides engineering solutions and inspires new technology everyday – researchers study all areas of nature to emulate its unique properties for scientific advancement.

For example, the centripetal spirals found in flowers and shells assist with the ideal flow of liquid; principles from the highly developed, reflective structure of butterfly wings have improved display technology; engineers have observed the characteristics of birds and fish to create efficient aerodynamics and the study of flora and fauna of the ocean have influenced the design of underwater turbines for tidal power generation. Similarly, architects frequently emulate the shapes and properties of plants, land and sea to inspire designs for buildings and structures.

Dental professionals are also constantly emulating nature when matching the colour of the dentition as well as the shape, colour and texture to create natural looking restorations. This is an example of bio-emulation and a thorough understanding of the structures and light interaction of the natural teeth is required for practitioners to achieve the best aesthetic results.

This fascinating world is an area that the Bio-Emulation Study Group is dedicated to. This international group of dental professionals are devoted to the advancement of excellence in aesthetic dentistry by using biomimetic approaches to recreate the anatomical form and optical features of the natural tooth. The group's principal, Sascha Hein MDT, explains:

“To emulate nature as closely as possible has always been at the core of human desire. It has formed the foundation for many cultural and artistic developments.

“Modern dental technology also perpetually strives for individual aesthetic perfection. However the consistent and precise reproduction of the shade of natural teeth still presents us with an unchanged challenge - despite the immense academic and scientific efforts of the last twenty years.”

Sascha Hein has conducted a wealth of independent research into bio-emulation. He has authored many publications and his studies have led to the development of the visual_eyes liquid and the fluor_eyes flash system for fluorescent dental photography. Sascha has lectured around the world for many years and is due to deliver a 45 minute presentation entitled “Bio-Emulation: Science meets Art” in the Lecture

Theatre of the Dental Technology Showcase (DTS) 2015. The flagship event of the Dental Laboratories Association (DLA) will take place on Friday 17th and Saturday 18th April, at the NEC in Birmingham, held alongside The Dentistry Show.

Sascha adds:

“I am keen to share my practical experience as well as the results of my many years of research and investigations with delegates - from the shade taking process, to dental photography, to the practical realisation.

“Both the demystification and the recognition of established ideas is necessary to foster personal development and growth, to produce consistent results in the every day of a busy dental laboratory. Join me on this creative adventure in search of nature and origin!”

There is always something new to learn and as William Wordsworth puts it so eloquently, ‘let nature be your teacher’.

Further learning opportunities available throughout DTS 2015 will be delivered through the brand new CAD/CAM Theatre. Bringing you the latest news and ideas in modern technologies and enhanced workflows, this Theatre will host leading dental manufacturers and suppliers who are keen to show how you can enhance your business processes with CAD/CAM.

Also new to DTS 2015 will be Launchpad UK, where you will have the chance to discover all the latest materials and innovations in the UK market. Registrants will even receive updates in the weeks leading up to event, so you can plan your visit and make the most of everything on offer.

Finally, designed specifically for dental technicians, clinical dental technicians and lab owners, the lab-dedicated Lecture Theatre, Practical Theatre Technicians Workshop will offer over 70 lectures, live demonstrations and interactive workshops. In addition to Sascha Hein, world-class speakers including John Wibberley, Jonathan Bill, Stephen Green and Phil Reddington will be presenting, with verifiable CPD available throughout.

For all this, plus copious networking and socialising opportunities make sure you and your team don't miss DTS 2015! Register for your free delegate passes online today.

Sascha Hein's lecture takes place in the Lecture Theatre on 18th April at 09:45. A session not to be missed!

SASCHA HEIN

Biography:

Sascha Hein, MDT graduated in dental technology in 1997 in his native Germany before working in a number of dental laboratories in Europe and the United Arab Emirates. He completed further studies in dental ceramics under Masahiro Kuwata in Tokyo, Japan and in 2004/05 he attended Master School in Freiburg, Germany where he graduated top of school and won silver in the annual Kanter Award Competition which premiers Germanys top three Master School students.

In 2007, founder Willi Geller inducted Sascha into the international Oral Design group and since 2011 he has served as editorial board member of the German Quintessence of Dental Technology. In 2012 he was welcomed into the Bio-Emulation group of which he currently holds presidency. Sascha Hein has lectured internationally for many years and has authored numerous publications of which some were featured in the 2009, 2011 & 2014 QDT Yearbook. After spending twelve years in Perth Western Australia, Sascha returned to his hometown in southern Germany in 2013 where he now lives and works.

PRODUCTS & SERVICES GUIDE

The Dental Technology Showcase (DTS) has now been running for 12 years, and in that time has grown into a technical and business conference, and major trade exhibition, catering for the whole lab team.

With over 100 companies, DTS 2015 will be the largest and most diverse assembly of trade suppliers, service providers and professional organisations available to Lab Owners and Technicians at any UK event. Each and every exhibitor will have a new product, new idea or specialist advice while many will be showcasing the latest equipment or materials, the best offers and support services to help you and your team run a smarter, more efficient, and profitable dental business.

At DTS 2015 there are already 30 exhibitors that were not with us in 2014, so if you think you saw it all last year, then think again. New suppliers are highlighted on page 10 and 11 of this newspaper - please make sure you visit them and see what they have to offer, they may just have the solution you've been looking for!

Across the trade floor you will find manufacturers from around the world who are looking for a UK agent, distributor or wholesaler to help them take their product to market. If you offer these services to international companies then, again, please make the time to find out what they're looking to introduce to the UK profession.

The success and expansion of DTS is down to thousands of proactive, passionate lab owners and technicians like you, utilising the event to meet the trade. Your support has created a marketplace for suppliers to showcase their portfolio of products and, in turn, from their support and investment we are able to improve and enhance the delegate experience each year by offering a more enriched clinical and business education programme for the profession, for FREE.

All the lab and technician membership bodies and regulatory organisations that will be present at DTS 2015 provide exceptional support to dental professionals, so please visit those relevant to you and find out how they can support your career and business.

This will be the biggest and, hopefully, best DTS yet - I hope you can make it. Register for your **FREE** place if you haven't already done so by visiting: www.the-dts.co.uk/psguide or call 020 7348 5776.

Kind Regards

Matt Stokes
Show Manager, Dental Technology Showcase

DENTLAB MANAGER

State of the art technology for your dental laboratory. You will easily register orders and do the invoicing in the end.

This software also includes all European Union requirements within the Health industry such as Traceability, Electronic Health Record, Quality Assurance, Back Up, Statement of Conformity, Deviations and Reports. Improve control over the workload in the overview "Active orders", as green or red lights will help you to prioritize. No more delayed orders!

Every technician will be able to see their work depending on what department they belong to. Pictures and information on every order will be shared effectively, automatic e-mailing of invoices is available.

An extended version was developed for greater labs and their needs. Production overview in detail in a calendar to help you forecast busy days, barcode functionalities, and reports on employee production in detail. Large Dental Laboratories can save important time on DLM Enterprise."

BQE

New -Comfort Move for your back in the future!

When designing the ComfortMove we focused on creating a combination of comfort, optimal support and freedom of movement. The 5cm thick upholstery provides equal pressure and prevents pressure points on the circulatory system, allowing for free blood flow in the legs."

VISIT US AT STAND F72

CONSILIO3D LTD.

Consilio3D, specialist consultants in digital healthcare solutions, offer a unique 3D scanning system which digitally captures and stores your study models.

You don't need to be IT savvy because utilising the perfect match of all initial IT training, Maestro3D digital dentistry software and 3D White Light scanner, we enable dental practices and laboratories to create in-house, clear brace's for your patients, at a fraction of the cost of traditional systems on the market today. The Maestro hardware and software in combination with our 3D printing bureau services gives both practices and laboratories the optimal solution for starting small, and growing your business in the lucrative area of own brand clear brace provision. From supply of scanner through to a flexible scanning service. We can provide cloud point data or a full CAD model in a file format of your choice.

VISIT US AT STAND 40

- Naturally occurring blue/white opalescence and fluorescence
- Canines darker mesially and more translucent laterally
- A wide range of Anterior and Posterior moulds
- Vitality across the 16 standard shades ranged A1-A4
- Excellent colour stability
- Guaranteed bonding to all denture bases
- Has CE 2292 and ISO 13485:2012 quality certificate

VISIT US AT STAND 5

MOUTH CANCER FOUNDATION

The Mouth Cancer Foundation is committed to raising awareness of mouth cancer.

Dental practices in the UK should be performing thorough mouth cancer checks on their patients. This quick, detailed examination takes just 2 minutes, yet very few patients are aware they should receive this at least once a year.

The charity's Mouth Cancer Screening Accreditation Scheme is successfully raising awareness amongst both patients and dental practices by calling every dental practice in the UK to be carrying out a thorough head and neck examination as part of regular check-ups. The scheme is a 'Two minutes to save a life' screening protocol that every dentist should be able to include in their routine examinations in order to increase early detection rates and save lives.

Membership to the scheme costs £200 in the first year but dental practices joining us during DTS will get a £50 discount."

VISIT US AT STAND L87

REITEL FEINWERKTECHNIK GMBH

REITEL stands for stainless steel! The new ERGORET AQUA is designed for trimming and cutting under wet conditions, where protection for health and clothes is requirement; it is especially useful when processing zirconium.

REITEL's ROTOGROUND MINI and ROTOGROUND NT stainless steel grinders are available at very special offer. Come and see at the booth 605."

Your Digital Partner

We have the zirconias, the expertise and the service.

Zirconesse

Highly popular, full contour crowns made totally in premium grade high translucency zirconia.

ZOSPEED

The original and our best open zirconia, also with a 20% higher translucency option available!

JustIt

The no-frills economy zirconia.

spectraMax

Our latest zirconia with exceptional translucency. Fully anatomic or reduced for porcelain addition.

spectroTI

Custom titanium abutments.

Noritake

Zirconia from the Japanese masters.

Nobel Biocare

Zirconia and Alumina from the original manufacturers.

3M ESPE Lava

Quality from 3M based on years of thorough research.

3M ESPE Lava Ultimate

80% nano ceramic particles embedded in a highly cured resin matrix.

PMMA

High quality CAD/CAM PMMA for long term temporary use.

Call us now on **0117 977 3593** or visit www.bristolcrown.com

SPECIAL OFFER:
Try your first **spectraMax**® at HALF PRICE, for both our loyal existing customers and new ones!

VISIT US ON STAND 132

THE BRISTOL CROWN COMPANY

We have for many years operated a lab to lab service providing a range of quality CadCam zirconia products.

All our substructures are manufactured in our Bristol milling centre using medical grade isostatic zirconia and as technicians we pride ourselves on providing excellent products and a great service to our fellow technicians.

We accept models for design and scan or can process the design files from your scanner.

Our latest product is SpectraMax, a zirconia with exceptional translucency. It is made from a fully bio compatible isostatic zirconia and at 600mpa it is much stronger than lithium disilicate but has the same translucency. It is suitable for any part of the mouth and can be used for single units and bridges (maximum 3 units)

Please come and see us at the show to arrange your 1st SpectraMax for free Please ring 0117 977 3593 or visit www.bristolcrown.com for more information.

VISIT US AT STAND 132

THE ORTHODONTIC COMPANY (TOC)

Visit us on stand 634 where we will have many products on display and we will also have some excellent DTS show offers available.

The new TOC Laboratory catalogue will also be available to take a copy away with you.

VISIT US AT STAND 634

CENDRES+METAUX UK

Cendres+ Métaux formed around 130 years ago in the precious metal refining business. For many years alloys and attachments provided the foundation for CMUK to become a modern comprehensive dental supplier.

Our product portfolio now includes Willi Geller Creation Ceramics, DESS implant components, Smile Line and DEKEMA with the latest additions of Pektkon® High Performance Polymer and Anaxgum. Yet we offer more!

Our CM Tech Studio, an unmatched state of the art education suite. With an enviable list of world class technicians and the UK's best home-grown talent we offer some of the finest technical education in the UK.

Where else can you get photography, shade taking, composite, ceramics, social media and DEKEMA courses under one roof?

We are much more than an alloy & attachment supplier in 2015!

VISIT US AT STAND 100 & 205

NABERTHERM GMBH

NABERTHERMS high-temperature LHT 03/17 D furnace with a max. temperature of 1650 °C is perfectly suited for sintering translucent zirconia.

The special molybdenum-disilicide heating elements offer best possible protection against chemical interaction between charge/heating elements. The furnace controller can be freely programmed for the individual sintering of the zirconia material. The zirconia units are positioned in ceramic saggars. Up to three saggars with approx. 25 units each are stackable.

NABERTHERM'S high-temperature LHT 02/17 LB Speed sintering furnace, equipped with MoSi2 Super HT heating elements for a maximum operating temperature of 1650 °C, is perfectly suited for sintering translucent zirconia. The furnace is equipped with automatically drying function which is very important when using coloring liquids. The furnace has additionally a rapid cooling device and allows the table to automatically open stepwise for faster cooling. Depending on the charge and the type of saggars, processing can be accomplished within two hours.

VISIT US AT STAND 142

ZIRKONZAHN

At this year's Dental Technology Showcase 2015, just like the CAD/CAM System 1-TEC Wet Heavy Metal, the highly translucent and strong zirconia "Prettau® Anterior" and the new pre-coloured zirconia "Anatomic Coloured"!

Don't miss the chance to take a look at Zirkonzahn's latest developed products & news, new and unique course – opportunities and lots of other projects coming up soon!

We are looking forward to meeting YOU soon!

Come to stand 345 and discuss our offers on the Marathon Microtech range of Laboratory Micromotors. We also have start up deals on the Ruthinium range of private, independent and economy acrylic teeth. We manufacture separating solutions, duplicating gels and Laboratory cleaning liquids.

VISIT US AT STAND 345

RDT TECHNOLOGY LTD (VALPLAST)

Gold Tripoli - Valplast have formulated an exciting new pre-polishing compound, Gold Tripoli. It reduces the stages used when polishing a Valplast flexible partial dentures by one and reduces the overall polishing time while still giving an even deeper lustre and high shine to the surface of the finished partial.

Care Kit

The care kit has been put together to include all of the items required to keep a patient's Valplast® flexible partial denture looking and feeling like new. Supplied in a convenient, professional looking zip top presentation care kit bag.

Flexible Denture Brush

Specially developed to be used on Valplast® appliances. The bristles are made from 100% highest quality silicone. Soft enough to be safely used on Valplast® flexible partials but still strong enough to be effective. It is also ideal for patients with sensitive gums and is supplied in a convenient travel tube for safe storage.

AME GROUP LTD.

In the medical and dentistry markets, AME have been providing fast accurate prototypes for use in surgery or fast orthodontics without the fuss, cost and delay associated with other methods. "3D printing" is, in simple terms a way of producing a physical part quickly from a 3D generated model.

AME Group have been "3D Printing" for 18 years using different technologies and is only a small part of our complete service offering. Our team of product designers can develop your new and innovative product, our bank of 3D printers can produce your prototype and our model making team and low volume production facility can make your product reality. AME Group has the strength, experience and capacity to develop your new product from concept to market.

VISIT US AT STAND 305

IMPLANTIUM UK

Implantium UK presents the Implant Pilot a guided implant placement surgery system that is designed to ensure a safer implant plan, which can be used with all implant systems.

The guide is specially designed according to the initial impression that is taken by the implant dentist this impression also allows our lab to create a life size model of your patient's teeth so that restorative features can be designed and made prior to the actual implant placement.

The key part of a guided implant procedure is the use of a CT scan; this CT-scan will show the density and structure of a patients jaw bone so that our experienced implant surgeon can accordingly plan where the implant is going to be placed.

We also have the option of selecting the LAUNCHPAD route for the implant pilot so that you receive Digital Mentoring.

Visit us at Stand 08 to find out more.

FOREFRONT OF INNOVATION

The development and integration of CAD/CAM technology is fast becoming commonplace within modern dental laboratories. The many benefits of a digitised workflow ensure the delivery of a high quality and reliable service, in turn encouraging trust and satisfaction from clients for increased referrals and business profits.

The speed and efficiency it offers for a wide variety of cases, enables a short turnaround for maximum productivity. The accuracy produced is unparalleled compared to traditional methods, increasing the precision of fit first time. What's more, digital methods provide more robust security for data, while also improving communications with the dentist for better collaboration and a more successful clinical result.

With so many different options now available on the market, however, how do you choose which is right for you? What should you be looking for? Where should you be looking? What training or support will you need?

In his lecture at the Dental Technology Showcase (DTS) 2015, Stephen Green will attempt to answer some of these questions so that you may make the best decisions for your business. As owner of Stephen Green Dental Studio in Nottinghamshire, a leading laboratory in restorative crown and bridgework, Stephen has much experience with many different CAD/CAM technologies.

"My lecture will be about adopting new technology, exploring the variety of CAD/CAM options available to labs and how we as a business developed these technologies," he says.

"I will look at why labs should consider digital technology if they haven't already, the equipment available to them, what it does and where it is from. I will discuss where to look and what to look for, and how to review the options depending on delegates' individual circumstances. After all, a one-man lab may not require the same technologies as a large operation, and it is important to choose the most appropriate piece of equipment for the business. As with any investment, the return achieved is an important aspect to think about even before purchase. With regards to this, I will share my experiences of CAD/CAM technology and how I measure the return on each piece of equipment I buy."

For lab owners, the initial purchase or upgrade of CAD/CAM technologies also requires thought towards staff recruitment and training. Stephen also hopes to look at these areas and offer some advice and proven ideas to help you avoid any potential pitfalls.

"We have a predetermined recruitment and training processes we follow at Stephen Green Dental Studio with regards to digital technologies, and I hope to share this during my DTS lecture. I'll also consider what has worked and not worked for us as a business in the past, so that delegates may gain ideas of how best to approach the subject in their own labs."

Following on the theme, the brand new CAD/CAM Theatre at DTS 2015 will offer further insight into the various technological options on offer in dentistry. An array of leading manufacturers and suppliers will take to the stage to demonstrate the cutting-edge solutions they provide, sharing their own experiences and expertise to ensure you find the right product for you.

Also brought to you for the first time will be the exciting Launchpad UK. With its new dates of Friday 17th and Saturday 18th April, DTS 2015 will be ideally placed to introduce you to the very latest products, materials and equipment available in the UK. The experts will be on hand

to give you all the information you may need, and those who pre-register will receive updates and details of what to expect in the weeks leading up to the event, enabling you to plan your visit.

In addition to all this, verifiable CPD will be delivered throughout the lab-dedicated two-day programme in the Lecture Theatre, with demonstrations held by leading professionals in the Practical Theatre and hands-on sessions available in the Technicians Workshop. The outstanding speaker line-up will include those at the very forefront of the field including Jonathan Bill, Sascha Hein, Julain Dorey and Phil Reddington to name but a few. The extensive trade floor will also return from previous years, with more than 80 leading suppliers such as 3Shape, Biomet 3i, Cendres+Métaux, Heraeus Kulzer, Nobel Biocare, Straumann, amongst many other reputable names.

Remaining the Dental Laboratories Association's (DLA) flagship event, DTS 2015 promises to deliver education, inspiration and networking opportunities for all dental technicians, clinical dental technicians and lab owners. Make sure you and your team don't miss out by registering online for your free passes today!

More than efficiency. Cost-effective workflow solutions.

What does efficiency mean to your business?

- Introducing Straumann® CARES® X-Stream™ - the complete implant-based, single tooth, full prosthetic restoration in one step: 1 scan, 1 design and 1 delivery

The In-house Company

Keep the full value creation in-house

– this is what many companies want and not least dental laboratories. Amann Girschbach, one of the leading innovators and full-service provider in digital dental prosthetics, is championing the cause to enable a complete in-house process chain for its customers.

Its mission - the development and manufacture of system components which intermesh uninterruptedly to guarantee continuous working processes from A to Z. As a result labs profit from perfect quality frameworks, but also from efficiently arranged workflows, reproducibility and dependable processing. Thus, the Ceramill CAD/CAM system is one of the most versatile and technically adept on the market which incorporates 35 years' experience and know-how in CNC and CAD/CAM. The high degree of inhouse production spanning the product idea, development and manufacture up to final assembly allows Amann Girschbach to adapt its systems to economic and dental-specific requirements right from scratch.
