The Dental Technology Showcase 2016

DTS RETURNS

The Dental Technology Showcase (DTS) is well established as the event of the year for dental technicians, clinical dental technicians and lab owners. The 2015 show welcomed more than 1,500 professionals through the door and so it remains the best-attended event in the UK, with 84% of delegates rating the show as excellent or good.

Highlights of 2015

- 95% of delegates discovered new products and services and / or suppliers among the extensive exhibition.
- 47% of delegates made purchases while at the show.
- More than half of those in attendance were interested in CAD/CAM solutions.

New for 2015, the CAD/CAM Theatre proved highly popular, with leading experts presenting inspirational cases, fresh ideas and cutting-edge technologies. Also introduced for the first time was Launchpad UK, introducing the latest products, materials and equipment on the UK market following global launches at IDS 2015 only a few weeks previous.

Further highlights of the event included the Association of Dental Implantology's (ADI) Implant Theatre and copious networking and socialising opportunities. The Lecture Theatre also hosted a selection of world-class speakers, plus there were opportunities to witness live demonstrations in the Practical Theatre and then get hands-on with new materials in the workshops.

What's New for 2016?

As the Dental Laboratories Association's flagship event, DTS has long received support from various leading

dental organisations and societies. In 2016, we are delighted to welcome two brand new educational features run in conjunction with the Orthodontic Technologists Association (OTA) and the British Association of Clinical Dental Technology (BACDT).

Orthodontic Technician's Seminar Stream – Supported by the OTA

This brand new seminar stream will offer a combination of exciting lectures and workshops suitable for both experienced orthodontic technicians and those who work in other fields and are interested in finding out more. A range of topics will be discussed from cleft lip and palate care to multi-stranded wire retainers and stent positioning, orthodontic technology materials and poly(methyl methacrylate)- free appliances. Sessions will also be run by top names in the field, including:

- James Green, Great Ormond Street Hospital for Children NHS Foundation Trust
- Andrea Johnson, Derby Teaching Hospitals NHS Foundation Trust
- Paul Mallett, University Hospitals of Morecambe Bay NHS Foundation Trust
- Rye Mattick, Newcastle upon Tyne Hospitals NHS Foundation Trust
- Edward Mapley, Cardiff Metropolitan University
- Daniel Shaw, Doncaster and Bassetlaw Hospitals NHS Foundation Trust.

DTG - BUILDING A WORLDWIDE NETWORK

By Von Grow & Phil Reddington

The DTG (Dental Technicians Guild) stands for specialty handmade esthetic dental restorations. Von Grow calls it

a group, but believes it is much more than that. Groups can be so closed off, and hopefully so far, the DTG has not come across as a closed group. It has been suggested that the DTG have a double name: The Dentist-Technicians Guild. Yes, Dentists have been added to this open group, and they are AWESOME. Bridging the gaps between Dentists and Technicians will be pivotal, and this will be done by adding more dentists to the group.

The mission of the DTG is to fight for Quality restorations. The industry is changing. There are big companies buying and acquisitioning many of the smaller labs. Consolidation is in the midst. Labs are declining at an alarming rate. If you have not felt it, you will in the coming years.

What are your plans for the future? The DTG propose that all dental technicians band together in the name of high end, handmade, esthetic restorations, and do not let machines take over your jobs. The idea is this: Instead of hoarding all of your secrets and techniques, the DTG give the information away freely to other like-minded technicians and dentists.

By doing so, dental technicians can rise to a level that no one can touch. It only works if it is done together. Dental technicians can carve out a niche for themselves that will serve as a protection when the big fish come swimming by. If this idea does not interest you, it is understandable. But everyone within the sound of the DTG's voice that is feeling helpless, down trodden, fearful of the future, or just wants to get excited again about the work you do, let's take a stand. Let's get a worldwide network going that is so big, that it cannot fail. You do not have to fight against CAD/CAM, but rather, let's take it with us!

DTS RETURNS

Continued from front page...

Paul Mallett, OTA Chairman, comments:

"The OTA is happy to be contributing to the educational programme at DTS 2016, where we will be presenting highly informative and relevant sessions for delegates to enjoy.

DTS has been a great event in previous years, giving us, as the representative association for orthodontic technicians here in the UK, a valuable opportunity to engage with our fellow technicians and to continue to work as an education partner with DTS. We look forward to connecting with more orthodontic technicians during the next event."

National CDT Conference – in partnership with the BACDT

Providing headline speakers, verifiable CPD and a professional trade show, the BACDT Annual Conference has always been a great event. By partnering with DTS 2016, the experience will be taken to a whole new level for all those in attendance. The conference will be open to all clinical dental technicians and dental professionals with an interest in the spectrum of topics explored.

Alan Forest, Director for Membership at the BACDT, says:

"DTS, co-located with The Dentistry Show, is the perfect venue to hold the BACDT Conference due to the mix of high profile speakers, great trade turn out and great networking opportunities."

STRAUMANN HEADLINE SPONSOR OF DTS 2016

The Dental Technology Showcase (DTS) is pleased to welcome Straumann as Headline Sponsor for the 2016 event.

Event Director Alex Harden comments:

"We are delighted that Straumann, a leading provider in implant, restorative and regenerative dentistry, is supporting DTS in this way. Together, we hope to deliver a diverse range of high quality education for all delegates, while also presenting the very latest products, materials and state-of-the-art technologies on the market."

Stephen Booth

Stephen Booth, Country Manager of Straumann UK notes,

'CAD/CAM and digital technology is becoming even more essential for streamlining laboratories to make them more efficient. In a rapidly changing market, we are excited to showcase our solutions for technicians and

DTS provides the ideal opportunity to explore how we can work together in partnership.'

At the UK's largest and leading event for dental technology, DTS, held alongside The Dentistry Show,

the Straumann team will be available across the two-days demonstrating their extensive range of innovations for dental laboratories.

The Straumann® Dental Implant System is complemented by a range of matching precision components, designed and crafted to the highest quality standards in order to ensure long-term reliability, and technicians are encouraged to use genuine Straumann components to ensure the long-term success of all implant cases. The Straumann® Variobase® Abutment delivers a highly cost-effective solution for screw-retained single crowns and cement-retained crowns and bridges on either Bone or Tissue level implants, offering extended restoration options for maximum design freedom.

Straumann is also a leading developer of digital solutions that seamlessly connect computer-assisted imaging, planning, design and manufacturing across the entire tooth replacement/restoration workflow. With this advanced technology, the company offers state-of-the-art CAD/CAM prosthetics to specialists, general dentists and dental laboratories around the world. Straumann® CARES® CAD/CAM prosthetics are manufactured to very high precision standards in centralised milling, processing a broad range of materials.

Additionally, Straumann's partnership with Createch provides a wide range of CAD/CAM structure solutions for implant-borne dental prostheses for a variety of indications, and is importantly underlined by Straumann's Guarantee of clinical accuracy of components.

DTS 2015 REVIEW

THE UK'S LEADING EXHIBITION FOCUSSED ON DENTAL TECHNOLOGIES & THE DENTAL LABORATORY.

DTS 2015 remains the best attended event in the UK with 1500 dental laboratory owners (10% increase vs 2014) and technicians enthusiastically enjoying an action-packed two days of sourcing, education and networking with over 100 exhibiting trade and specialist suppliers on the dedicated show floor.

Co-located with The Dentistry Show, where over 7,100 dental professional delegates attended, the combined shows presented a unique annual opportunity for all stakeholders in UK dentistry to come together, at one time, to harness the important relationship between the technician and dentist.

PRODUCTS DEMANDED BY DELEGATES

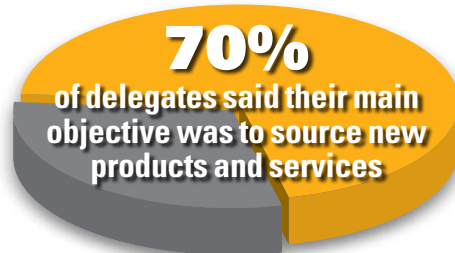

Key product areas of interest at DTS 2015.

CAD/CAM	50.30%
Implants	38.80%
Laboratory Instruments & Tools	37.30%
Ceramics	36.70%
Crown & Bridge Appliances	35.20%

Taken from delegate registrations. Other statistics available on request.

10% increase
in laboratory owners
attending DTS (YOY)

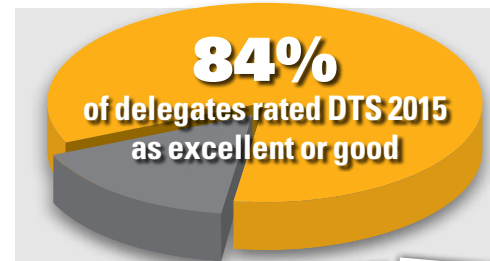

The **NEW CAD/CAM Theatre** proved to be a massive hit with delegates, not only with lab owners and technicians, but with dentists too! With so many delegates attending lectures in this theatre, this is the perfect opportunity for CAD/CAM suppliers to get in front of this lucrative audience and explain how your products can dramatically enhance a lab owner's or dentist's business and client satisfaction.

- 65%** of delegates that attended had direct purchasing authority
- 95%** of delegates discovered new products and services and/or suppliers
- 47%** of delegates made purchases while at the show totalling more than £1.4m
- 31%** have made purchases since the show with new suppliers, with a further 46% of delegates planning to make a purchase within the next 3 months (date of survey 23 Apr 2015)

Reinforcing that DTS is where UK dental laboratories come to buy.

Dental Technology Showcase is THE place to assist with all business aims for 2016 and beyond:

- Launch products
- Makes sales
- Meet existing and new prospective clients
- Gain industry feedback
- Educate the profession
- Create new business alliances
- Support and/or find dealers

- 87%** of delegates say they will return in 2016
- 72%** of delegates say DTS is important to their personal or business development

Talk to us about your objectives and we will help tailor a solution to help you achieve them. Join DTS 2016 and we will start working on your behalf, whether it is conversations with dealers, market exposure, branding or simply introductions, we are more than just an exhibition.

DTS 2016: BE THERE OR LACK FLAIR

Steve Campbell RDT

DTS is delighted to announce Steve Campbell RDT, founder of Nexus Dental Laboratory Ltd Harrogate, as Chairman of the 2016 educational programme. Steve recently received an award for Innovation and Support in Promoting British Dental Technology from the British

Dental Association Awards, and is a prominent trainer and lecturer focusing on CAD/CAM digital workflows in restorative dentistry.

"It was an honour to be asked to chair the educational programme at DTS 2016", Steve said after receiving the invitation to chair. "I believe this is the most important show in the UK for dental technicians and lab owners. I hope that we can make a real statement about the quality and passion of UK dental technology by showcasing some of the world class technicians we have working in the UK labs, that are now lecturing all over the world.

"It's my aim to show delegates some of the latest materials and products that are being used by these world class technicians, so that they come away aware of all the potential restorative options that are available.

"With DTS running parallel to The Dentistry Show, this also allows the chance to catch up with everyone in the dental team. I'd suggest that delegates try and arrange to come along with their surgeons, and show them just how much is changing in the dental technology arena."

With 13 years of implant technician experience behind him, Steve works alongside some of the most highly regarded dental surgeons in the UK. His extensive knowledge on the latest technology available in digital and CAD/CAM workflows and his

work for the UK and American dental press, makes him a first class speaker for the lab community. His input to the DTS 2016 will be invaluable for delegates wishing to remain up-to-date with the latest products and technology available in producing the highest quality restorative solutions.

The Dental Technology Showcase 2016 will no doubt enlighten, motivate, excite and educate dental technicians and laboratory owners, all the while demonstrating the multitude of technological advancements which help to move the profession forward and widen options for surgeons and patients. Quite simply, you cannot afford to miss it.

DTG - BUILDING A WORLDWIDE NETWORK

Continued from front page...

Anyhow, machines are only as good as the operator. They are tools, like a wrench, or a hammer. They only do what we say. Without us, they just sit.

Phil Reddington, CEO and Head Ceramist of Beever Dental Technology (BDT), adds his comments about what the DTG means to him:

"Since joining the DTG in 2013 I have seen many changes in my work and my attitude towards work.

Through the group I have made many new friends all around the world all either Technicians or Dentists and the thing I realised was this, we are all trying our best in difficult times to provide our patients with the best care possible.

We can only achieve this by working as a team and supporting each other.

The DTG taught me to share what knowledge I have with other members and not look over my shoulder and in return the knowledge I have gained within the group has helped me grow as a technician.

Sometimes it is simple problem solving sometimes complex treatment planning but whatever dental questions I may have you can be sure someone in the group knows the answer and will freely advise.

Not only this, I personally find the group to offer great support both morally and when the stuff hits the fan. If you are overwhelmed with cases, these guys and girls will travel to each other's labs or cast or mill frames for each other at any time of the day or night.

I think the awareness raised in the group on different aspects of the industry also helps me make the right choices when looking at new technology or systems, honest unbiased opinion is something very rare in any industry I feel we get that in the guild.

Von also wants to bring the benefits of the Guild to a wider audience through the DTG magazine and international Symposiums.

We are looking to organise events here in the UK where technicians and dentists can join events like Dental Technology Showcase for very little financial outlay and learn from some of the best people in the industry.

I Look forward to doing my part for the UK dental industry and for The DTG.

I would urge anyone reading this to get involved with the online community and reach out to groups like the DTG because I know the Guild has made me a better technician."

Straumann® Bone Level Tapered Implant

More than primary stability.
The new tapered standard.

ANOTHER SUCCESSFUL CONFERENCE AND AWARDS CEREMONY FOR THE BACDT

On the 25th and 26th September 2015, Manchester once again played host to the BACDT Annual Conference, a two day event which gives CDTs a great chance to come together, and allows the BACDT office to personally thank the membership and the trade for all their support for the BACDT over the past years.

In terms of the conference line up, it would have been hard to put together a more diverse and interesting set of speakers, who provided members with a range of stimulating and informative topics. The six lectures covered topics ranging from consultation advice to aesthetics in prosthodontics, and received great feedback from all delegates.

The conference finished with 2015's BACDT Awards, this year attracting over 400 nomination forms from patients. This number has doubled from last year, a testament to the hard work of BACDT members, and their patients' appreciation for all their hard work. In his opening speech, BACDT President Andy Barrs acknowledged that such figures truly show that everyone is a winner, with the biggest winner being Clinical Dental Technology in the UK.

The main award, Member of the Year, went to a very deserving Les Wheatley, with the full list of winners and highly commended members below.

BACDT ANNUAL CONFERENCE AWARD WINNERS:

Member of the Year
Winner: Les Wheatley

Best Patient Experience
Winner: Matt Burnell
Highly Commended: John McIlveen

Most Welcoming Practice
Winner: Jonathan Dean
Highly Commended: Peter Stibbard

Best Patient Information
Winner: Simon Owen
Highly Commended: David Parsons

Extra Mile Award
Winner: Matt Burnell
Highly Commended: Mike Brindle

Affiliate Member of the Year
Winner: Schottlander
Highly Commended: Skillbond

The BACDT extends its congratulations to all of this year's winners, as well as a thank you to all who attended the conference and made it a success for another year in a row.

We are pleased to announce that the next BACDT conference will be held in 2017 in partnership with the DTS

and The Dentistry Show in Birmingham. We are thrilled with this new partnership, and hope that by partnering with one of the biggest annual events in dental technology, even more of our BACDT members will be able to attend the conference, making it a great event for both networking and educating.

ARE YOU GOING?

The Dental Technology show is the ideal opportunity for you to discover the very latest innovations and on-stand learning will also be available from top manufacturers and suppliers.

Darren Shorrocks, Managing Director of Cendres+Métaux UK, comments:

"Our stand was very well attended by both existing and potential new clients at

DTS 2015 and we look forward to the next event in order to keep the momentum going.

"Key products we'll be displaying in 2016 will include the Pekkton® high performance polymer, CM LOC® system, Creation Ceramics, Anaxdent and our range of digital solutions.

"We will have demonstration pods distributed over two stands where delegates can discover the latest techniques with Pekkton®, Creation, pressed ceramics and CM attachments. We are also delighted to welcome some of the finest speakers on these topics from the UK and abroad."

For a winning combination of free education, CPD and access to the very latest products and innovations, don't miss DTS 2016.

The next event will be held on Friday 22nd and Saturday 23rd April 2016 at the NEC Birmingham. For more information please visit: www.the-dts.co.uk, call 020 7348 5263 or email dts@closerstillmedia.com

WITH DTA YOU'RE COVERED

The Dental Technologists Association (DTA) is the UK's professional representative body for dental technologists, whether qualified or in training. Managed by dental technicians, the association's prime purpose is to serve its members through the advancement of standards within dental technology.

DTA members are informed, supported, and encouraged through a raft of initiatives that are free or discounted at the point of joining.

CPD

Each alternate month members receive our 28-page, colour journal, The Technologist or e-newsletter, Articulate. Both provide an array of interesting CPD-based articles that over a five-year cycle more than fulfil 50 hours of verifiable CPD, including those all-important core subjects. In addition our website facilitates the online completion of CPD, records progress and allows easy organisation and access to CPD information for when the GDC requests it. All free with membership.

Support (All free with membership)

- DTA members can access a range of Fact Sheets from the safe management of gypsum waste, and the ins and outs of public liability insurance, to the facts about what metals can be used in crown and bridge restorations.

- Want to know what you are worth or how you can increase your earning potential?** Start by gathering the facts using DTA's 2015 recommended pay scale for technicians working in a private commercial dental laboratory.

- Need to know something?** We have a dedicated helpline that seeks to answer members' questions: everything from compliance and continual professional development to audit tools and launching your own lab.

- Need help?** Our legal helpline is available 24 hours a day/365 days a year.

Indemnity

Our market is becoming more litigious and as a dental professional, you must have indemnity cover. For just 12 pence a day (£45 per annum) UK Special Risks, through DTA membership, offers comprehensive, all-inclusive cover including professional indemnity, public & products liability, and legal expenses including tax and VAT investigation.

Value for money

DTA is run by dental technicians to support dental technicians. We are committed to keeping members in touch with what is going on in dental technology as well as the wider dental arena and we welcome new members every day. Full membership is just £8.50 a month and students are invited to join us for free.

You won't find better value for £8.50 – go on, join us.

THE USE OF POLYMER MATERIALS IN MODERN DENTAL TECHNOLOGY

Phil Reddington

Phil Reddington, CEO and Head Ceramist of Beaver Dental Technology (BDT) in Leeds, will be one of many high profile speakers in the Lecture Theatre. With more than 24 years' experience in the dental industry, Phil has a wealth of knowledge on various different topics.

An active member of the ITI, ADI, BACD and BIDST, Phil is also a mentor, lecturer and author of several publications, as well as a member of the online dental group The Dental Technicians Guild.

His session, entitled "Full Arch Implant Reconstructions – A Better Way!", will explore the advantages and disadvantages of polymer materials in modern dental technology and Phil will also share a revolutionary technique he has helped develop alongside Lee Mullins at his lab for implant restoration cases. He explains:

"The session will give an overview of high performance polymers, discussing the indications and limitations of the materials. I have been using these products for more than

10 years and hope to share some of my own experiences with delegates, demonstrating how to use them for optimal results and focusing particularly on implant dentistry. This is definitely an emerging market with popularity of polymers on the rise, so I think it's important that technicians are aware of their benefits now.

"During the session I will also consider the 'BDT Technique'. An idea born and developed with Lee Mullins in Leeds at BDT, it can be used to restore full-arch implant cases. It encompasses every stage of the process from the treatment planning to execution and communication between the laboratory and dentist. We have been offering training courses on the technique for several years now, but we want to share it with more professionals because we believe it simplifies the restoration process and is therefore achievable for all technicians. Costing nothing to implement and requiring next to no learning curve, this technique makes full-arch implant restorations easier and cheaper, with more predictable and easily repeatable results."

Phil continues:

"DTS 2015 was a very busy show for me as I was involved in delivering lectures and on-stand sessions. As it was co-located with The Dentistry Show, I was able to meet with dentists I work with who perhaps are geographically located far from my lab, providing great socialising and networking opportunities.

"The speaker line-up for that event was fantastic and there were a lot of demonstrations and hands-on workshops on offer for delegates to make the most of. All of my team had a very productive couple of days and seemed to really enjoy the event!"

"DTS 2016 looks no different, with a wide range of learning opportunities available for all. I believe that for dental technicians looking to improve their skills and understanding and get completely up-to-date, this is definitely the event they need to attend."

Phil will be joining an impressive line-up of speakers in the Lecture Theatre, including John Wibberley, George Morgan, Mark Bladen and Carl Fenwick. A diverse range of topics will be covered to help you develop your skills and improve your communication channels with collaborating dentists for enhanced quality of work produced.

EURODONTIC

It was great to meet so many new people at the NEC. Lots of you loved the new Eurodonic products we were showcasing, and asked us what training is available on them.

In response to this demand, we are organising a week-long roadshow offering demos and hands-on workshops. Delegates will be able to see the very latest 3D printing technology from SCHEU Dental, along with the new SCHEU light-curing unit and materials, and the new generation Biostar® and thermoforming materials.

We hit the road on 12th Oct –we'll be sending out information closer to the time, but please keep visiting our website www.eurodonic.co.uk for dates and venues to ensure you don't miss out!

VISIT US AT STAND 70

STRAUMANN

As market leaders in implant dentistry, Straumann will

be exhibiting the Straumann® Variobase® family, a highly cost-effective solution for screw- and cement-retained crowns and bridges on either Bone or Tissue level implants.

Straumann® Variobase® for crowns is now available with a customisable abutment height of 5.5mm down to 3.5mm, one of the smallest abutment heights on the market, giving design flexibility for implant restorations even in the most limited of spaces. Technicians can also enjoy the performance of Straumann® Variobase® for multi-unit, bridge/bar restorations as it features a non-engaging conical shape with helix threads for a strong retention of prosthetic restorations.

Also on display will be the Straumann CARES® System which enables technicians access to Variobase® prosthetic components to accurately design prosthetic restorations. The team will also be on-hand to discuss how the partnership with Createch Medical provides customers a wide range of advanced CAD/CAM structure solutions for implant-borne dental prostheses.

For more information, visit Stand 510 at the Dental Technology Show or alternatively contact Straumann on 01293 651230 or visit www.straumann.co.uk

WHW

A self-curing pourable acrylic suitable for fabricating precision dentures, relines and repairs. Mixes quickly to form a perfect consistency for pouring, with a good working time. Finishes and polishes to a high gloss with a high colour stability.

Available in 3 shades - light pink, translucent and natural in either veined or un-veined.

Please ask about our technical article for more guidance to show how simple, effective and inexpensive the system can actually be.

For more information please call 0800 0092 444

RENISHAW

Renishaw is one of the

world's leading providers of in-lab dental CAD/CAM systems. We offer a comprehensive CAD/CAM suite direct to dental laboratories. This includes the DS10 contact and DS30 blue light dental scanners which enable labs to access a range of centrally manufactured crown and bridge restorations and abutments, in materials such as zirconia, 3D printed cobalt chrome, PMMA and wax.

As well as industry-established zirconia milling, Renishaw uses 3D printing (additive manufacturing) machines to 'print' cobalt chrome frameworks. Our 3D printing system is a sophisticated, computer controlled process digitally driven direct from 3D CAD data. We create tooth-supported and implant-supported frameworks under the trademarks LaserPFM™ and LaserAbutments™ through this process. Each 3D printed framework is manufactured here in the UK.

We offer a scanning service for LaserAbutments. Details of implant types supported, Freepost™ labels and order forms can all be found at www.renishaw.com/dental.

Finally, to make all these products easily available, we offer our software package, Renishaw Dental Studio (powered by Exocad) with intuitive and extensive modules for all your design needs.

To learn more about Renishaw or our dental products please contact Chris Dimery (UK Sales Manager) on Tel 07795827341 or email dental.webenquiries@renishaw.com.

DENTAL DIREKT

As a global company Dental Direkt GmbH focuses on the fields of dental CAD/CAM

materials especially dental zirconia, technological solutions, and services for digital dentistry.

We work continuously with an international network of partners, users and research

institutions to develop new and improved solutions. We are proud to announce our

cooperation with Zirconia Direkt Solutions UK (ZDS) our dealer for the UK market.

Zirconia Direkt Solutions UK was founded by a circle of dental restoration enthusiasts.

This partnership was setup between a dental clinic and dental laboratory to pursue the

latest technology in cost effective dental restoration. The growth in digital dental equipment

and the technological advances in this sector necessitated the move to digital restorations.
