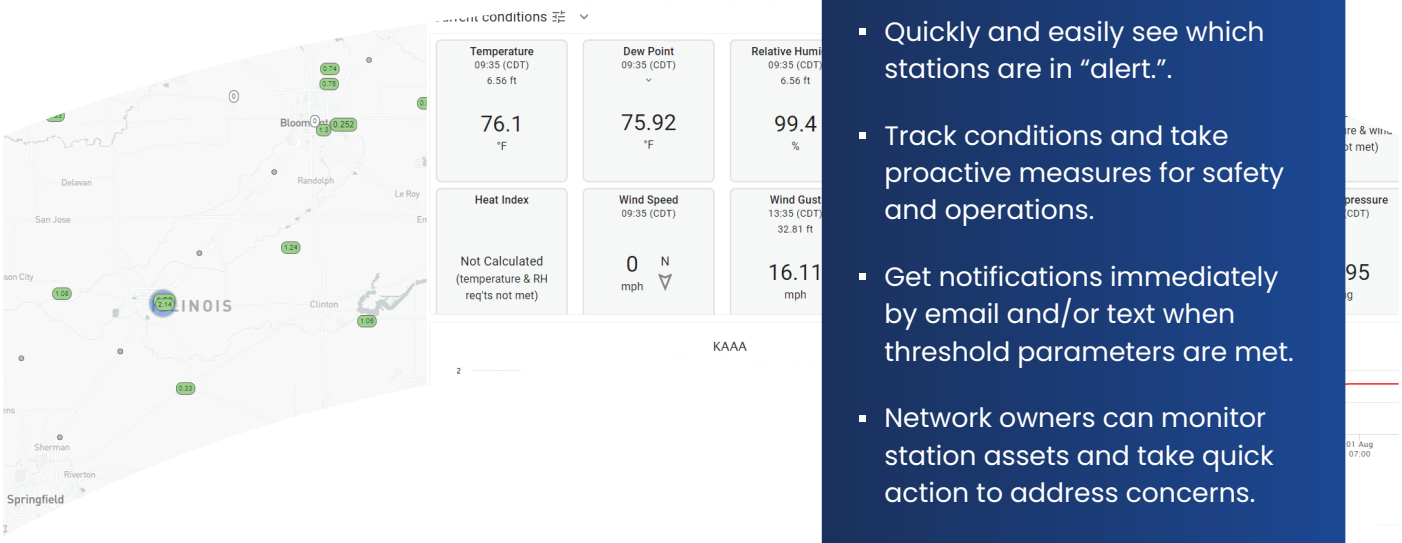
Synoptic.

Synoptic Data Viewer
Dashboards & Notifications



FEATURES

- Build dashboards to monitor specific environmental conditions or “problem” areas.
- Quickly and easily see which stations are in “alert.”.
- Track conditions and take proactive measures for safety and operations.
- Get notifications immediately by email and/or text when threshold parameters are met.
- Network owners can monitor station assets and take quick action to address concerns.

Empower Decision-Making with Weather & Environmental Preparedness Tools

Weather changes quickly. That’s why the Synoptic Data Viewer combines advanced visualization with low latency weather observations. This provides you, the decision maker of your operations, with tools and information to make faster, better-informed decisions.

The Synoptic Data Viewer Dashboards and Notifications platform employs advanced visualization tools that help users track real-time conditions, receive alerts when critical thresholds are met, and easily monitor their data assets. Users can create customized dashboards to monitor real-time data for specific areas or parameters. When critical stages are met, notifications by email or text can be set up to immediately alert users to take action.

Data Drives Decisions

Now more than ever, real-time, in-situ weather data is needed to support decision-making and situational awareness. Entities around the globe, from businesses to academia and government agencies, require fast and accurate weather data to save lives, protect property, and increase organizational efficiency.

With the Synoptic Data Viewer, observational stations are easily discoverable. Adding the capability to create customized Dashboards and add Notifications makes the platform a vital resource to support real-time decision-making. Synoptic understands that seconds matter; that's why we prioritize minimizing data latency to get critical information to users as soon as it's available.

Why Choose Dashboards & Notifications?

The power of the Synoptic Data Viewer and our Dashboards and Notifications tools originates from the company's aggregation of observations from providers around the world who desire their data to be publicly available. New data is made available in near-real-time – a hallmark of Synoptic's aggregation service. Innovative data visualization tools provide data insights from a large diversity of stations in one centralized location, giving users more decision-making power, supporting entities ranging from emergency managers to utility operators and the general public.
