

Synoptic Data Viewer

Your Gateway to Exploring and Monitoring Real-Time Environmental Data

Weather data is everywhere — the challenge is finding a source to view it all in one place. The Synoptic Data Viewer brings thousands of stations together in one intuitive, map-based platform, making it easy to explore, visualize, and act on the environmental data that matters most to your organization. Whether you're tracking a developing storm, monitoring regional conditions, or analyzing historical trends, the Data Viewer turns raw observations into actionable insight.

Trusted by government agencies, utilities, emergency managers, researchers, and more, the Synoptic Data Viewer is the single destination for quality-controlled weather observations from across the globe.

The World's Weather Data, in One Place

The Synoptic Data Viewer aggregates publicly available real-time and historical weather data from over 320 networks worldwide. Instead of hunting across multiple sources, you get a single, quality-controlled view of global observations — searchable, filterable, and ready to explore.

- Access real-time and historical data from 170,000+ stations worldwide
- Compare stations and monitor trends across networks and regions
- Save and share customized views with your team
- Mobile-friendly for situational awareness wherever you are
- Add your own network to the platform and share data with other users

Discover, Explore, and Monitor with Confidence

Interactive Map Explorer Visualize weather stations across the globe on a dynamic map. Filter by region, network, variable type, or station status to zero in on exactly what you need. Explore locations of observations from both public and private networks, and quickly identify data coverage in any area of interest.

Multiple Data Views Switch between map, time series graph, and tabular views to analyze data the way that works best for you. Whether you need a broad geographic picture or a deep dive into a single station's history, the Data Viewer adapts to your workflow.

Metadata Explorer Go beyond the data itself. Synoptic's built-in Metadata Explorer gives you full visibility into the source and coverage of all environmental data on the platform. Search by station ID or name, view periods of record, check station elevation, and instantly identify the networks and variables that match your requirements.

Historical Data Access View historical observations for any station and reference conditions during significant past events. Analyze trends, validate models, or build a baseline for risk assessment — all within the same platform.

Save, Share & Report Generate station reports, save custom views, and share filtered data with colleagues. Designed for teams that need to move fast and stay aligned.

Mobile-Friendly Access Full functionality on any device — desktop or mobile — so your team can monitor conditions in the field or in the office.

Enhance Your Experience with Dashboards & Notifications

Take the Data Viewer further with Synoptic's Dashboards & Notifications service. Build custom dashboards to track key variables, set automated alerts for threshold conditions, and keep your team informed the moment conditions change. Ideal for emergency management, utility operations, and any organization that needs to respond quickly to environmental events.
