

# CVC

## CONTINUOUS VERTICAL CONVEYOR

TRAMAK CVC are used for vertical transport of solid goods, such as cartons, boxes, baggage, barrels, etc.

Applications are f.e. crossing forklift-driveways, production areas in different levels, high capacity sorting systems, airport baggage transport check-in to makeup.

High capacity of hundreds or even thousands on a very small space saving footprint and up to several levels height are arguments for these systems, versus inclining straight conveyor and even versus spiral lifts.

Workplace environmental friendly low noise operation with the original TRAMAK Rubber-Blockchain (TRBC) avoid uncomfortable ear protection for valuable staff.

TRBC operates grease free and clean, protecting sensible products, even in food industry.

**TRAMAK manufactures different sizes of CVC, declared mainly by installed chain size:**

- » **T1 MINI** – for very small and light weight parts
- » **T2 NORMAL** – for typical components in size and weight
- » **T3 STRONG** – for larger components and higher weights. Engineering layout will tell the limits
