Defence

How we add value

Engineering services

Supplements the OEM's Engineering team with specialist skills such as HV design, functional safety, software, mechanical design, prototyping.

Systems Solutions

Modular solutions that accelerate and de-risk machine development projects. Examples are electrification subsystems, connectivity, software modules, or precision farming.

Applications specific products

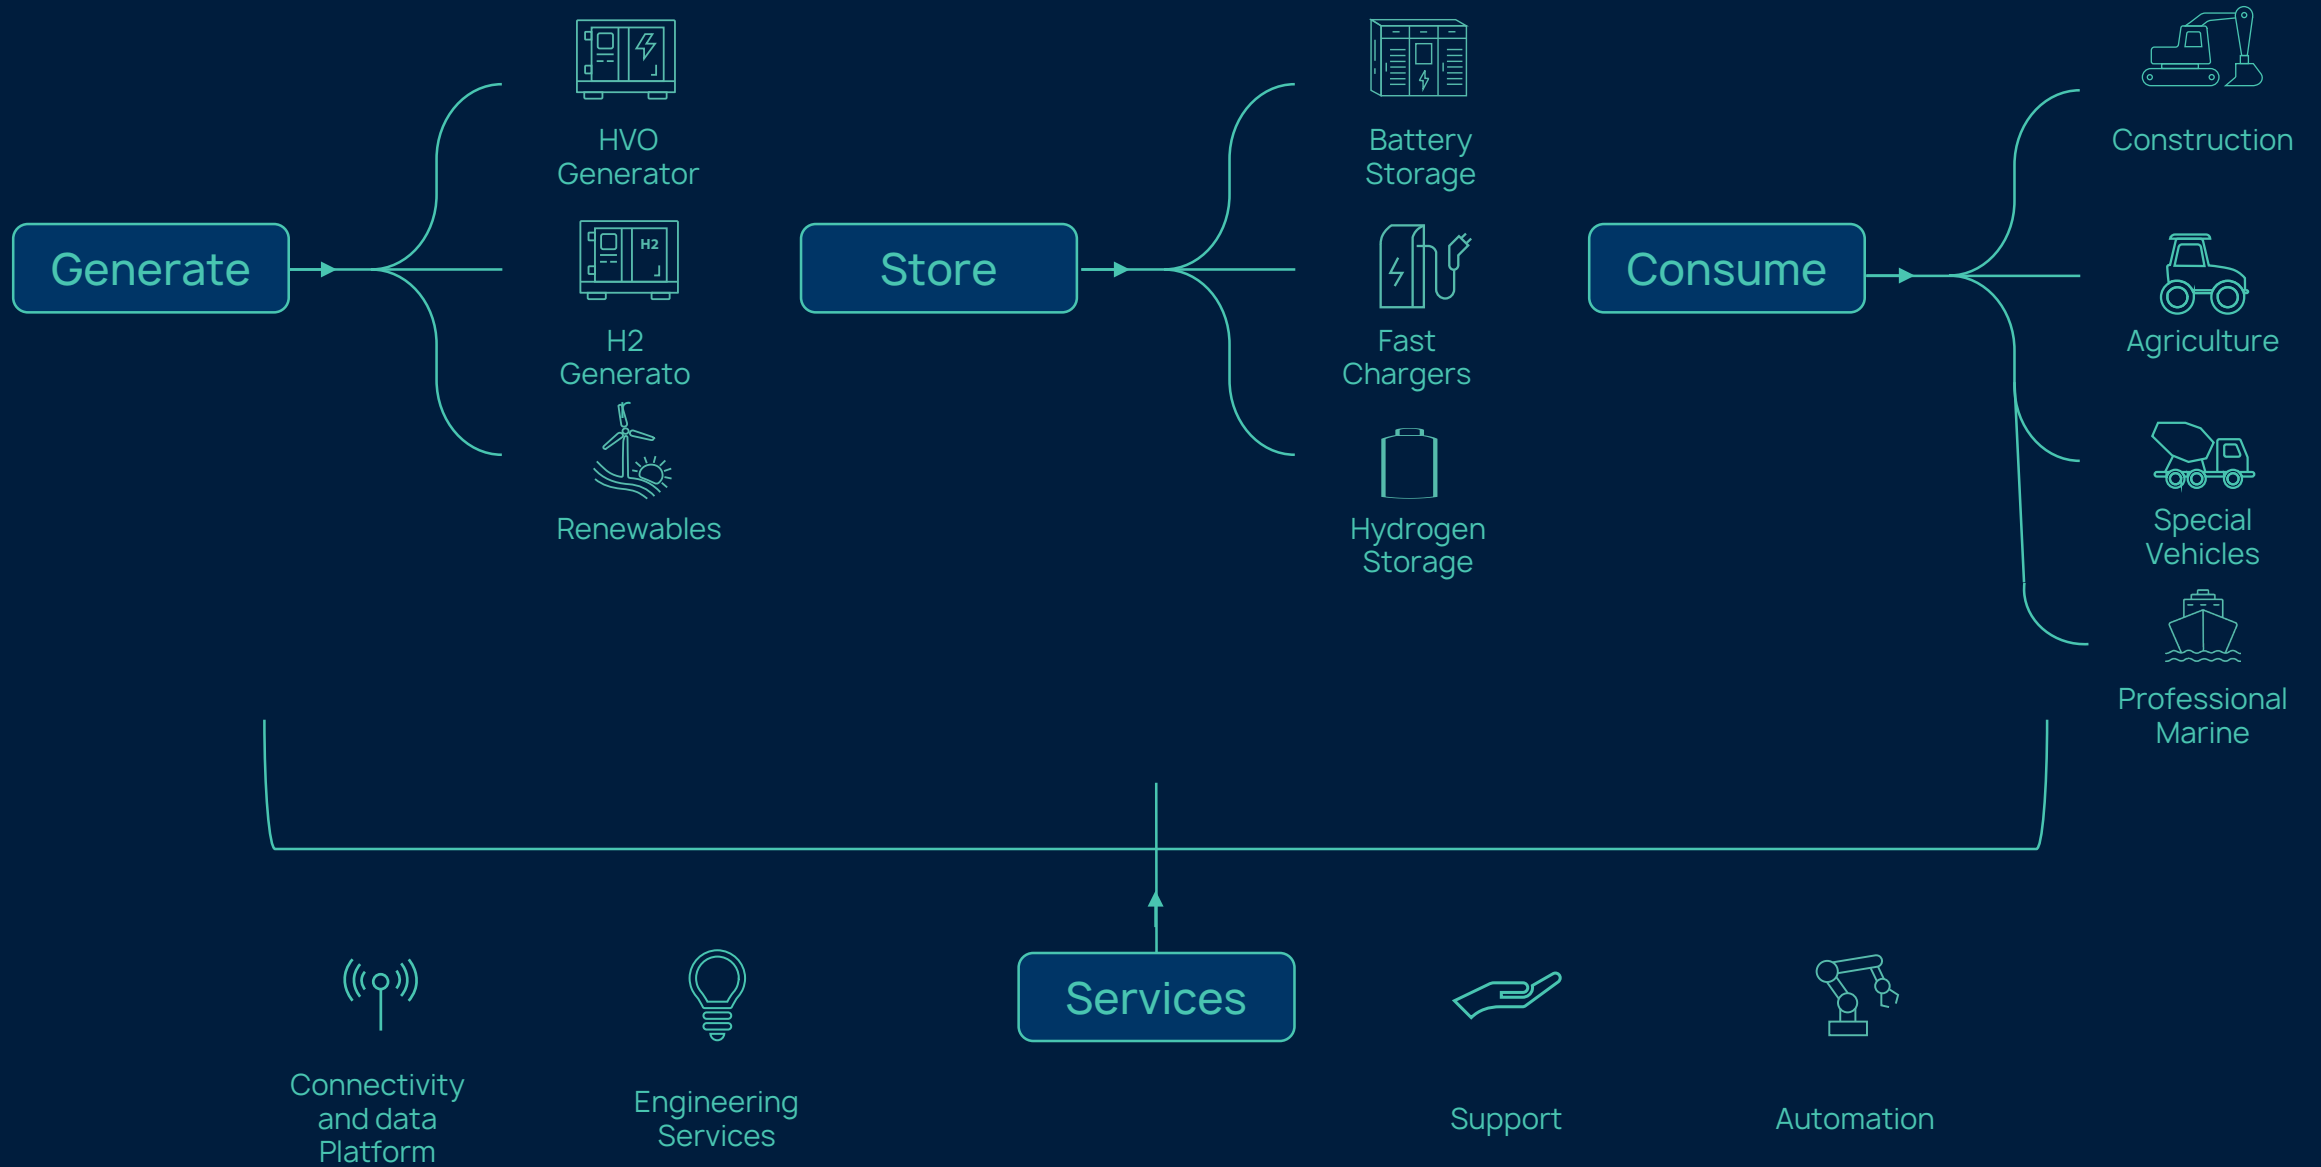

Responsive supply of high quality components such as HV cables, wiring harnesses, power distribution boxes, user interfaces.

Distribution Partnerships

Supply of critical components from industries leading suppliers with whom we have long term strategic relationships

Bringing the Low Carbon Ecosystem to Life

Example projects

Manitou

Partnership with the Manitou engineering team for electrification of telehandlers with hydrogen fuel cells

MAN Retrodrive

A 350kW drop in electrification for MAN vocational trucks. Matching the size, power and torque and mechanical interfaces of the factory diesel powertrain

Manurob

Design and integration in controls, hydraulics, electrification and mechanical design for the Loadix agricultural loader for bio-methane and livestock operations
