Automated Parcel Machines

Pointpack offers APM as a manufacturer. The devices are fully supplied with the Pointpack's system platform for automated courier machines.

Production of our own APM's designs, hardware R&D department, steel assembly plants and subcontractors with full control of the production process, enabling us to ensure the quality and durability of devices.

What makes Pointpack parcel lockers unique?

World-class suppliers of hardware components and the best engineers and designers focused on setting new industry standards. Selection of the best materials and steel with an admixture of precious metals ensuring long durability of devices operating in all environmental conditions. Standardized production allowing for flexible configurations, scaling and quality control .

Pointpack's dedicated APM hardware drivers built with many IT system functionalities in mind, which require efficient and safe coordination of many hardware components. Designed based on dozen years of experience in the industry of sending and receiving parcels. Emphasis on integration allowing machines to cooperate with many systems and applications

Pointpack parcel locker platform

CLS – Central Locker System

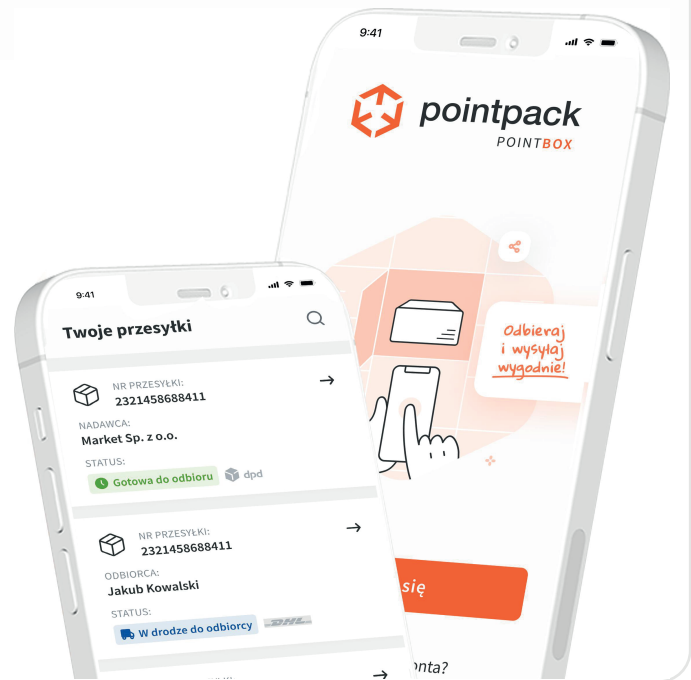

A central management platform for an entire network of parcel lockers. It enables integration via API with courier systems, mobile applications, and other external platforms. The system includes a comprehensive parcel flow management module and customer notification module, ensuring seamless operations across the network.

LLS – Local Locker System

An application installed directly on the parcel locker, responsible for managing the loading and unloading process for couriers and customers. It also supports SDK integration with parcel lockers from different manufacturers, ensuring interoperability and flexible deployment.

PointBOX – Mobile Application

A customer-facing app that enables users to send and receive parcels directly from the locker. It also provides real-time notifications, shipment tracking, and access to delivery history, ensuring full transparency and control for end-users.

We integrate courier companies
+180 million parcels handled
on our platform since 2012.

We implement parcel points
in retail networks

We develop
click&collect devices

Open Urban Logistics
Infrastructure Network

Advantages of the offer:

- **Flexibility** - automatic machines for outdoor and indoor installations, classic devices and the possibility of extending the offer with robotic courier machines
- **Reliable supply chain** – machines from a Polish manufacturer, production located in Poland. Stock of spare parts in the Pointpack warehouse.
- **R+D** – proven components and device design in the Pointpack laboratory. Possibility to adapt the design of devices and dimensions of lockers to customer requirements.
- **Comprehensiveness** - Pointpack services include construction work at installation site, development, integration and maintenance of IT systems; location acquisition, audit and adaptation services; installation and maintenance of courier APMs
- **Scalability of the solution** - We adapt to you
