

HIGH PERFORMANCE ENGINEERING

Welcome to RML GROUP

We are **your**
trusted partner.

RML Group was founded in 1984, although our engineering and racing heritage can be traced back to the 1950s. We've built World, European and British championship winning cars, and that success has spurred us on to become world leaders in automotive design, build and development, and pioneers in EV technology. Whether on road or track, performance, passion and winning drive everything we do.

McLaren

The term 'racing is in the blood' is often thrown around in motorsport circles, but in the case of the Mallock family the phrase is entirely accurate

1958

A WINNING HERITAGE

Winning is the Mallock family business. Amateur racer Major Arthur Mallock lit the flame in 1936, and his legendary U2 club racer of 1958 inspired generations of drivers and engineers. One was his son Ray, who became a professional driver before starting the team that has since evolved into the RML Group of today. And with Ray's son Michael taking over as CEO in 2016, the Mallock competitive spirit is now in its third generation.

1984

BATTERY DESIGN, DEVELOPMENT & MANUFACTURING

Entering the world of electrification with the ground breaking Nissan ZEOD RC, RML's battery design, development and manufacturing capabilities have grown over the past decade. These now include both high-power and high-energy battery systems, providing leading-edge technology in electrification for world-class automotive and off-highway applications.

We've designed, developed and built some of the world's highest-performing and most efficient Pure EV, Hybrid and internal combustion powertrains, breaking multiple records and winning several awards for technology and innovation.

ELECTRIFICATION

We're at the vanguard of high-performance electric vehicle development. Our manufacturing and design capabilities combine with our bespoke High Voltage department, where our expertise in battery packs, electric drivetrains and energy management systems shines. The result: cutting-edge vehicles that play a central role in shaping the future mobility.

Not convinced? We're the people that created the NIO EP9 and its Pure EV powertrain, which broke the electric car lap record at the fearsome Nürburgring. If we can crack the world's toughest racetrack, we can crack the boldest EV projects too.

SUPER LUXURY VEHICLES

With the growing demand for high-value super luxury vehicles, RML uses our honed experience in the design and manufacture of automotive products to create some of the most desirable vehicles in the world.

The RML Short Wheelbase is a prime example of the skills and core capabilities in this sector. As a high-performance super luxury GT, it pays homage to evocative sports cars from the golden age of motoring whilst trading on our considerable experience in vehicle dynamics to provide a refined driving experience aligned with modern-day useability.

PROTOTYPING & CONCEPT CARS

We aren't just a performance car factory – we're a dream factory, too. However creative or bold a prototype or concept, we have all the services to turn it into living, breathing reality. Design, chassis, engine, electrics, modelling, production, project management and more: from prototypes of single parts or engine systems to outrageous hypercar concepts, we're only limited by imagination.

CONTINUATIONS & VEHICLE APPROVALS

Heritage cars are as important to us as those of today and tomorrow. Our exacting standards help us construct meticulous recreations of any classic vehicle and create faithful replicas of iconic models.

We work across parts design and manufacture through build and finishing to OEM standards with quality workmanship always our top priority.

With such desirable cars, it's always a pleasure to see them in their natural environment. To enable you to enjoy your individual vehicle, RML has developed the skills and experience in vehicle homologation and has completed approvals for several continuations and one-off hypercars.

NICHE VEHICLE MANUFACTURING

To compliment RML's high-performance engineering capabilities we have grown our manufacturing facilities and resources to enable the low to mid-volume manufacturing of our creations. Manufacturing from component level to complete vehicle on one campus, allowing for efficient processes and quality control.

Following exacting OEM standards our capabilities include fabrication, machining, composite bonding and trimming, HV and LV electronics, harnesses, sub-assembly, paint and finishing. Providing a single source solution for prototype through to production vehicle manufacturing, testing and validation.

MOTORSPORT

We have never designed or managed a race or rally car that hasn't won, which is why major OEMs come to us time and again to run their international racing programmes. Our credentials: Multiple World and British Touring Car Championships, a World Sportscar Championship, European Le Mans and class wins at the 24 Hours of Le Mans, plus countless more titles won by our satisfied customers. We don't just take the chequered flag... we own it.

HIGH PERFORMANCE ENGINEERING

We're proud to apply all our automotive and motorsport expertise to a wider spectrum of engineering services, including the marine, off highway and aerospace sectors. Across design, prototyping and manufacture, or a turnkey service that spans concept to production, we leverage all our technical know-how and innovation, with sensitivity and discretion when required. We understand your objectives – and we know how to get you there.

MANUFACTURING

Timing is everything in manufacturing, from meeting tight production deadlines to supplying spare parts. That's why our wide-ranging in-house manufacturing facility is built to create quality components in short time scales, we have honed this through years of competitive motorsport.

Our vast manufacturing experience means we can help with every step of the manufacturing process: designing components, manufacturing to print, material selection, cost reduction and more. You name the parts you need: we can make them, on time, on budget and to world-class ISO accredited standard.

Alongside the physical, we're also masters of the digital. Our electronics team can design, supply, configure and calibrate most major electronic control systems as well as the wiring harnesses and sensors to stitch it all together.

Today's vehicles are more sophisticated than ever – and our manufacturing brings that sophistication to life.
