

Digital Setup Management - connected from engineer to car

ENGINEER

Create and manage setup sheets digitally.
Define target values and share updates instantly with the mechanic.

MECHANIC

Access setup data directly at the car.
Enter measurements and feedback in real time using the tablet app.

MEASUREMENT SYSTEM

Compare targets and actual values instantly.
Live measurements support faster and more precise setup decisions.

DATABASE

Store all setup data in one central platform.
Build a searchable knowledge base across vehicles and events.

Wheel Alignment System Workflow

TEAM & EVENT SETUP

- Create teams, vehicles and championships
- Define roles and access permissions
- Build a centralized cloud-based structure

DIGITAL SETUP SHEET

- Create setup sheets digitally
 - Define target values for vehicle parameters
- Store and manage setup data centrally

REAL-TIME SYNCHRONIZATION

- Transfer setup data directly to the tablet
 - Enable live communication between engineer & mechanic
- Instant updates available trackside

MEASUREMENT & ADJUSTMENT

- Capture live measurements directly at the car
- Compare actual values with engineering targets
- Make faster and more precise setup decisions

DOCUMENTATION & KNOWLEDGE BASE

- Automatically store all measurement data
- Create vehicle and event history
- Build a long-term database for analysis and optimization
