

## Non-contact Marking for Identification and Traceability

### Direct Marking of Rubber Compounds

The advancing development of manufacturing and logistics processes in the rubber processing industry is leading to increasing demands for automated product marking.

Tracking and reliably identifying semi-finished or finished products pose novel challenges for both manufacturers and retailers.

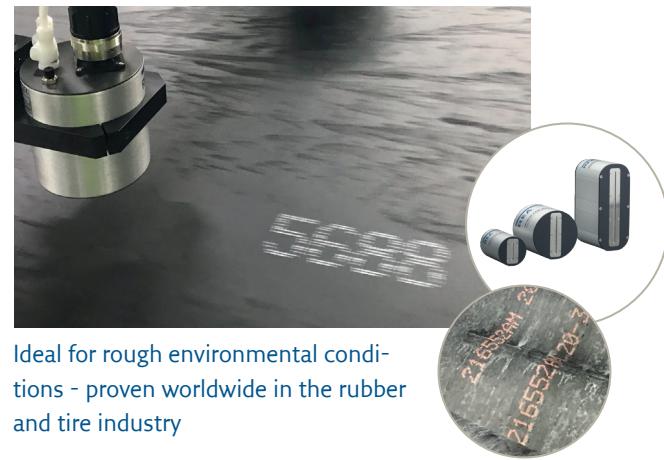

REA marking systems give you maximum flexibility for non-contact marking.

EVA-bag marking  
with machine-readable codes

#### REA JET DOD 2.0

Large character Inkjet printer

Ideal for rough environmental conditions - proven worldwide in the rubber and tire industry

#### REA JET HR 2.0

High Resolution Inkjet Printers

Ideal for rubber strips that require a small code - high-resolution and maintenance-free

#### REA JET LASER

Laser Systems

Ideal for the marking of machine-readable 1D/2D codes - captive and consumable-free

#### Your advantages:

- Cost reduction through automation - replacement of manual marking wheels
- Minimization of error sources due to intuitive operation with the REA JET TITAN platform - standardized operating concept for all REA JET marking systems

Industry 4.0 ready with machine-readable barcodes

Time savings through direct printing

Increased product quality and therefore competitiveness through traceability
