- Appeal to local government with green development plans

# Farm Amenity® & Garden Amenity® Service

The Green Food Solutions Farm Service comes with everything needed to grow your food from seed to harvest!

Green Food Solutions will provide a grower who will visit the farm to complete agricultural tasks, equipment maintenance and community engagement. Our urban farmers are kind, courteous, friendly, upbeat, highly educated, and passionate about urban farming. They are trained in Food Safety and Good Agricultural Practices (GAP).

Their responsibilities include seeding, transplanting, harvesting, packaging, delivering food to the on-site fridge(s), keeping the towers clean and presentable, integrative pest management, and being available to engage members of the building by providing hydroponic knowledge and skills.

Residents can join their local farmers in seeding, harvesting or transplanting, or simply enjoy picking up freshly harvested food every week.

Our Farm Service also provides emergency visits as needed.

*We are fully insured: General Liability and Workers Compensation.*
