

## Aqua Mover

A breakthrough new concept for water parks and amusement parks around the world. The first fully trackless (interactive) water ride system developed for the immersive venue market. The Aqua Mover is a trackless ride system making it very flexible in manoeuvring through the water. Invisible wires in the floor, below the water, guide the Aqua Mover. A fun ride for the whole family!

# Interactive, family-friendly and exciting water ride vehicle

The Aqua Movers can be equipped with high performance, push button electronically operated water shooters and with an impressive onboard sound system. The crews can compete with each other by shooting at targets. A real water battle can be played, giving fun and exciting moments to children. Each Aqua Mover has two benches and can carry four people. The ride twists and turns unexpectedly with many moves such as 90° pivots, 360° on the spot rotations, splits and mergers and route crossings. The crew members are part of a fully immersed experience!

The ETF Aqua Mover can be tailored to the customer's requirement, giving you a bespoke water ride system. Collaboration with (y)our creative partners in the industry makes this possible, whether it is vehicle decoration or adding interactive elements like lighting or 3D effects. We are capable of designing the Aqua Mover to maximise the engagement and entertainment value.

## FEATURES & OPTIONS

- Typical vehicle guidance distance 50 - 350 m2
- Track type No track, wire guided
- Application Indoor and outdoor
- Typical no. of vehicles 2 - 20
- Vehicle capacity 4 people
- Ride capacity per hour 360 - 720 people
- Maximum speed 0.8 - 1m/s
- Minimum horizontal curve 1.6 m
- Power speed On board battery system
- Operation time 12 hours/day
