Voyager Labs

MAKE THE INVISIBLE **VISIBLE**
AI-based Investigation Solutions

Voyager Labs, a world leader in advanced AI-based investigation solutions, empowers organizations worldwide to gain deep investigative insights about entities, individuals, groups, and topics.

Our proprietary AI technology enables investigators to easily analyze massive amounts of intelligence information as well as open, deep, and dark web data, understand content and human interactions and find hidden or unknown connections and relationships.

Government and law enforcement agencies, as well as private sector customers, use our award-winning, cutting-edge technology and superior domain expertise to exponentially increase the productivity and outcomes of their investigative teams, empowering them to mitigate risks and make the world a safer place.

Company
Voyager Labs (founded 2012) applies its AI technology to real-world public safety and risk assessments issues. It operates worldwide through its offices in the US, LATAM, APAC, Europe, and Israel.

Technology
Voyager Labs' unique, award-winning AI technology enables deep understanding of content, human interactions and connections.

Workforce
Voyager Labs employs a world-class team of AI researchers, data scientists and engineers, including pioneers of machine and deep learning, computer vision, and NLU.

Clients
Leading government and law enforcement agencies as well as commercial clients worldwide.

Accolades
Voyager Labs has been recognized by leading publications and analysts, including Fortune, Forbes and Gartner, as one of the companies leading the AI revolution.

Our platforms

Voyager**Check**
Identify potential risk

Risk assessment platform that provides an automated indication of individuals who may pose a risk. The platform provides the ability to automatically assess user behavior by answering predefined questions in near real-time, based on analysis of structured and unstructured data from a variety of databases and online sources.

Voyager**Analytics**
Deep Analysis Platform

Analysis platform, designed to analyze massive amounts of unstructured open, deep, and dark web data, as well as internal data, in order to reveal actionable insights. The platform enables a comprehensive view of individuals, groups, and topics, including relationships, content, influencers, and sentiments connected to a case.

Voyager**Vision**
Decipher visual data

Comprehensive visual intelligence platform that offers a full suite of visual data analysis capabilities. The platform automatically enables identification of key entities, mapping relationships and their nature, groups analysis, object detection, text extraction, watchlists creation and more.

Voyager**Insights**
Surface hidden storylines

Central investigative platform designed to solve cases by automatically uncovering relevant leads as well as leads investigators were not aware of. By analyzing and understanding the case's unstructured and structured data, the platform discovers and highlights the story behind extracted facts and inferred facts.
