A History of ONE and the US Department of Defense

Why global Defence organizations struggle with traditional ERPs

- Not organically built to support Defence
- Capabilities get lost in integrator priorities
- Rigid in how they work/deploy
- Not well suited for all organizational tiers
- Do not play well with other solutions
- Customized rather than configured
 - Longer time frames
 - Sustainment costs balloon

ERP reimaged

- | | | |
|--|--|--|
|  Natively supports key Defence capabilities |  Deploy your way with velocity |  Multi-lingual , all kinds of in-line assistance |
|  Combines logistical support on a single platform |  End-to-end , embraces “foxhole to factory” |  AI Enabled ; BYOI; Beyond Data Analytics |
|  Supports networked Defence ecosystem “with benefits” |  Flexible integration to current/future solutions; collaboration |  Never Legacy , your customizations are supported as COTS |

D-DIL / Contested / Austere Operations

Connection Type
← ... → Disrupted
- - - Intermittent

One Network Solution Operating within a Defence Cloud Enclave

Deployed Servers working in remote locations such as ships or warehouses with updates sent to enterprise enclave

Sealift

Line haul

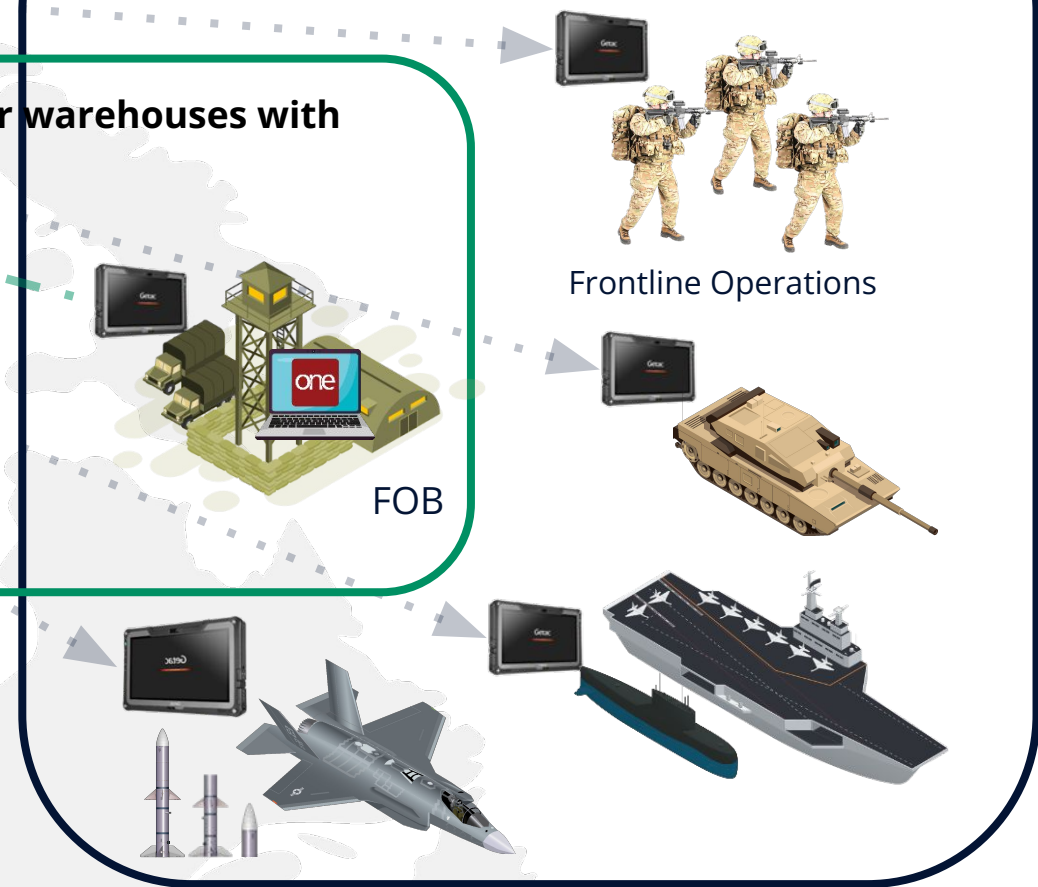

Installations

Deployed Server operating in connection with Legacy Enterprise System

Disconnected Clients in an austere environment communicating with enterprise

Frontline Operations

FOB

Tunable System of Control

Digital Supply Chain that is more than just Data Analytics – Execute what you plan

Complex multi-party processes that span systems and network services can be seamlessly delegated and coordinated.

Ensures no existing system is siloed and no IT investment is wasted.

This “embrace / enhance / replace” approach provides extended capabilities while maintaining existing System of Record(s).

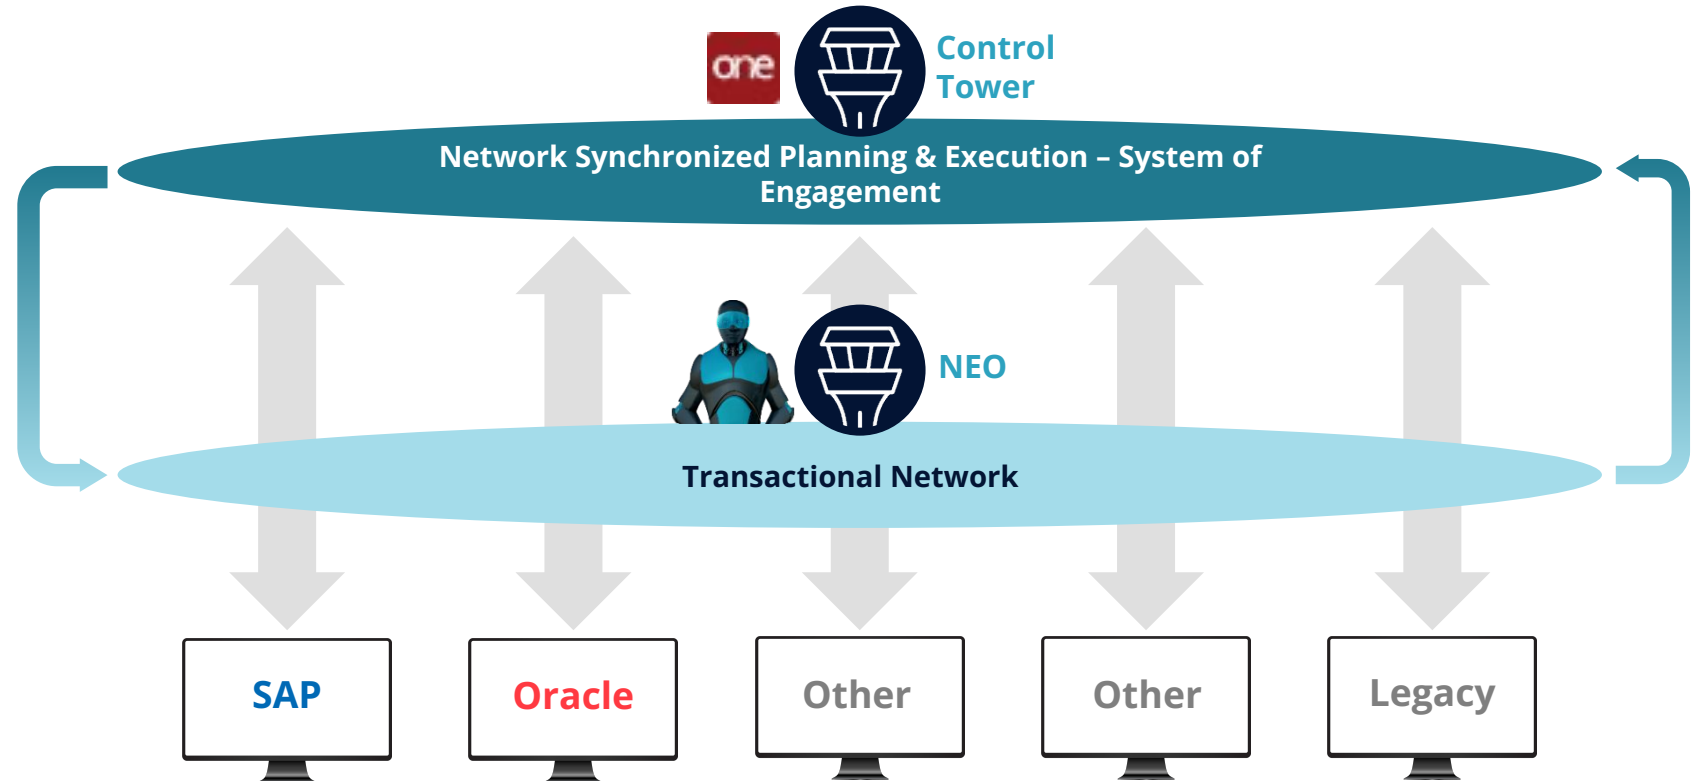

Dual Platform Strategy – Beyond Data Analytics

An additive approach to leveraging and extending legacy solutions with network optimization guaranteeing “never legacy”

Plan and execute simultaneously. Improved visibility with actionability

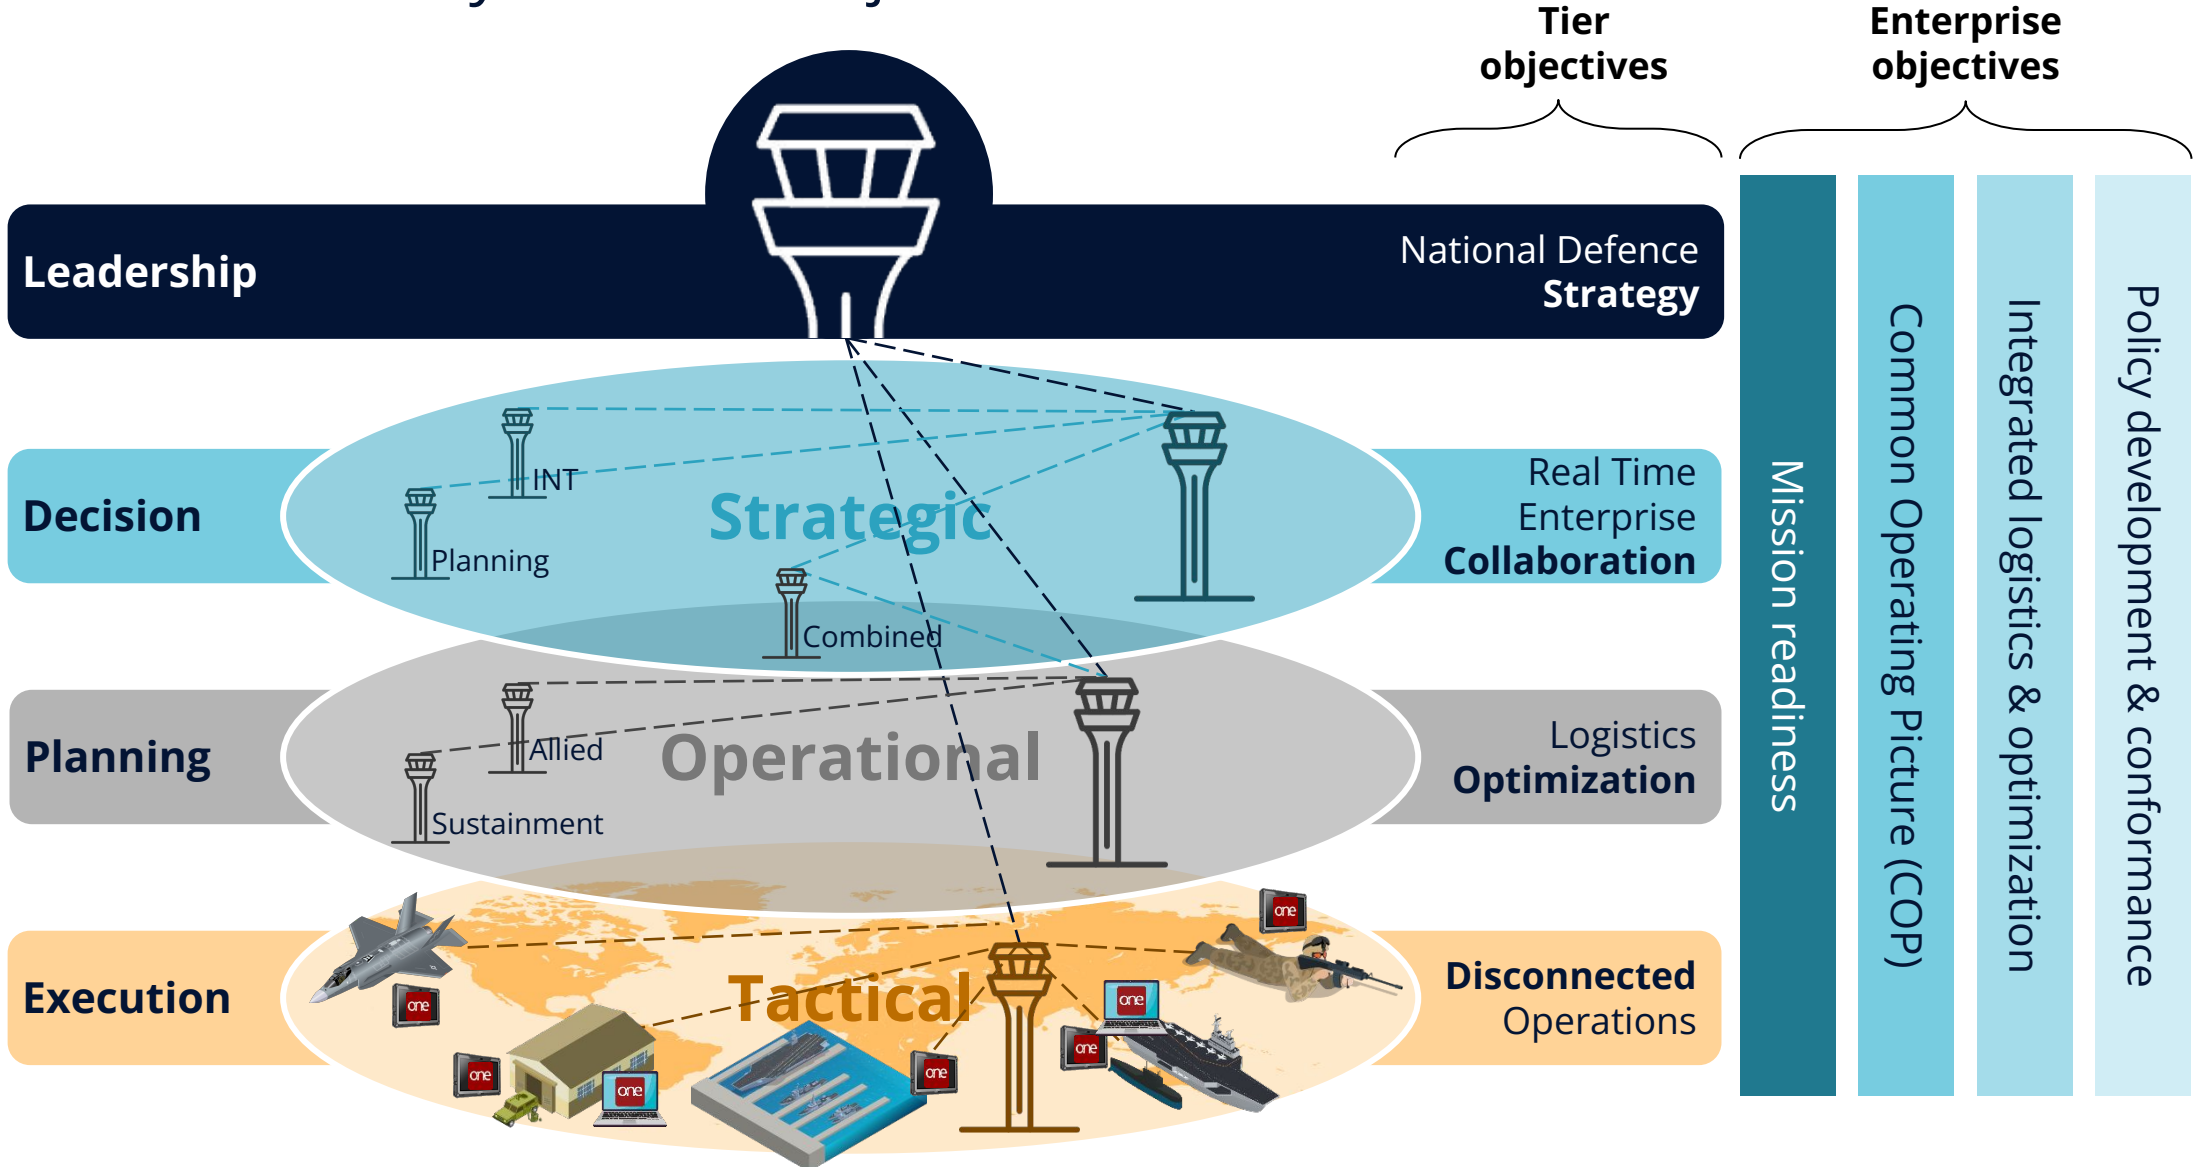

Secure, cloud environment; operations anywhere

Extends across all organizational tiers

Intelligent Control Tower

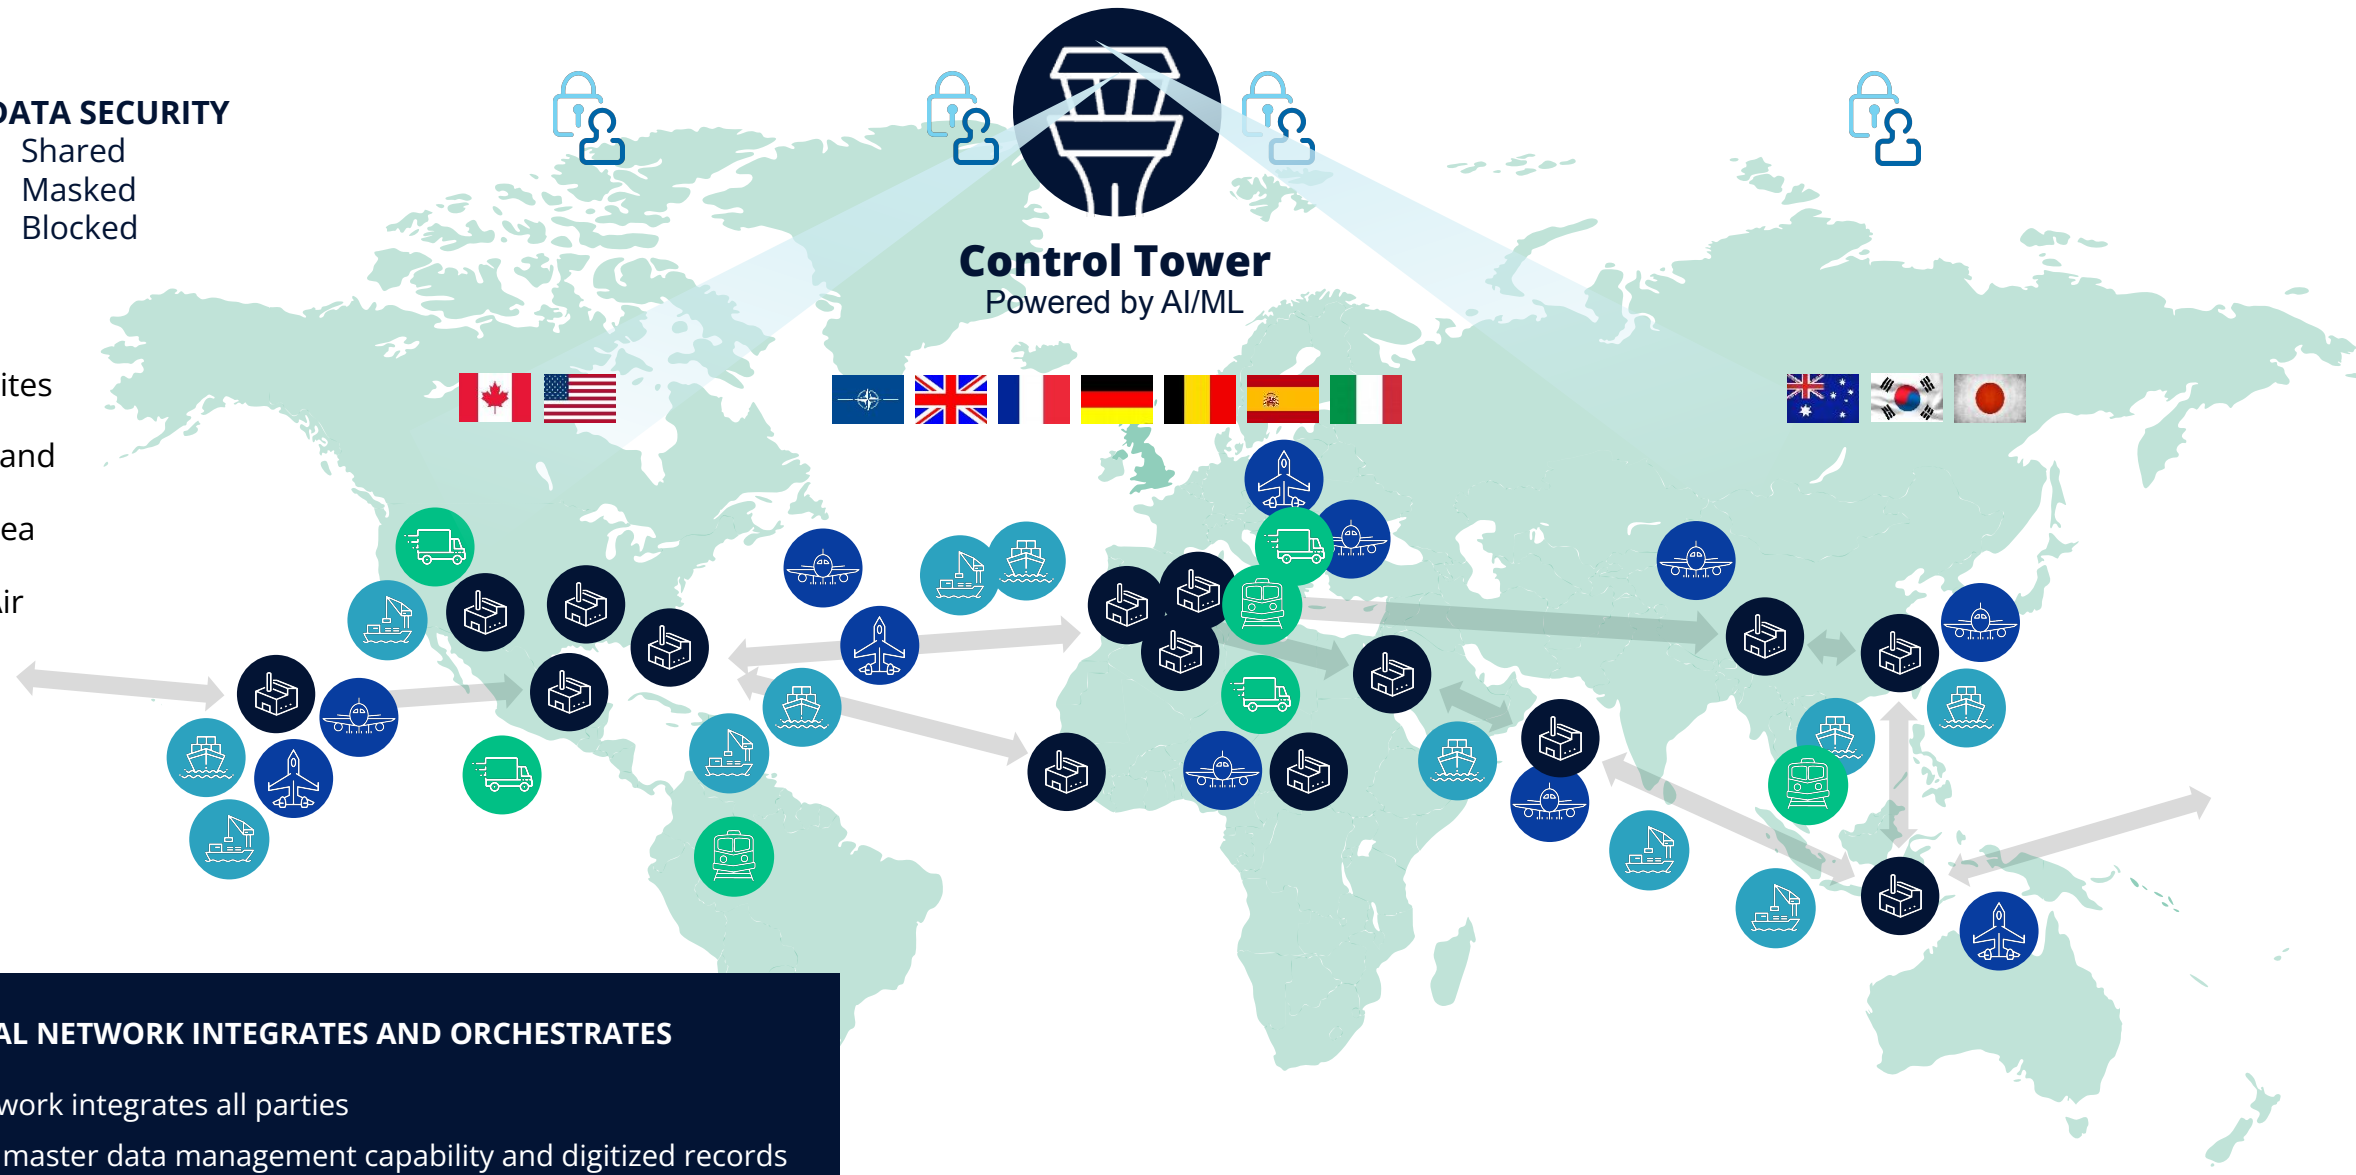

Enterprise-wide visibility linked to objectives

- DATA SECURITY**
- Shared
 - Masked
 - Blocked

- Sites
- Land
- Sea
- Air

Control Tower
Powered by AI/ML

GLOBAL NETWORK INTEGRATES AND ORCHESTRATES

- Network integrates all parties
- Full master data management capability and digitized records
- Agnostic maintenance, supply and transportation forecasting/planning, and execution
- Finance and auditability
- Supports all services and any country or language.

The Network provides secure communication that allows users, in any location and in any environment (D-DIL/contested) to maintain secure, complete, multi-modal, end-to-end visibility and actionability throughout the entire supply chain.

NEO for Global Defence: ERP as a Service

KEY CAPABILITIES

- Distributed MDM
- Integrated Planning & Execution
- Financial Accounting & Compliance
- Accountable Property System of Record
- Logistics and Class-of-Supply Agnostic
- Role & Permissions Management
- Integration Orchestration Hub
- Network Control Tower
- Deployed Operations
- Transportation Management (TMS)
- Order Management (OMS)
- Warehouse Management (WMS)
- Serialized Tracking (IUID)
- Secure, cloud-based or private
