

RAW PREDATOR Performance

RAW Predator brings together on road prowess & off road durability into a fast acting monotube design. Manufactured in Australia the Predator delivers that elusive feeling of comfort & control. If you use your 4WD for day to day running around & off road adventures on the weekend, the Predator is what you are looking for.

MANUFACTURING

The RAW Predator shock absorber range are manufactured in Australia based on a fast acting monotube design, incorporating a unique variable flow piston to reduce body roll and rapidly respond to the terrain ahead.

The design of the Predator is one of the most efficient heat dissipating shock absorber designs due to the single wall construction resulting in consistent performance on & off road with sharper steering response, less body roll and improved traction.

RAW PREDATOR

Engineered for Performance

The RAW Predator monotube design maintains a fine balance between comfort and control, while maintaining strength and durability:

Increased rod diameter for coil over shocks for extra strength and durability.

Large body size helping the shock stay cooler for longer under extreme working conditions.

Heavy duty low friction seal package with a larger bearing surface has been added to the Predator design. This helps withstand additional side load in hard off road conditions and retain oil under extreme temperatures.

Bump cap and wiper seal designed to keep dust and grime out.

High pressure nitrogen gas to resist shock absorber and strut fade.

High VI index oil which provides high levels of control even at elevated damper temperature.
