

# FROM MILD TO WILD

## SHOCKS AND STRUTS

Australia's terrain is some of the most diverse and demanding in the world. RAW 4x4 design and develop a complete range of heavy duty suspension equipment to survive the toughest of conditions. The team at RAW 4x4 don't believe in a one size fits all approach to suspension design, recognising that every 4WDriver has unique purpose for their vehicle. Our shock & strut range reflects this by offering 3 different levels of design:

### RAW NITRO

The RAW Nitro range will improve ride quality, reduce body roll & increase vehicle stability and control. Well suited to the recreational 4WDriver who is looking to lift the vehicle and improve overall suspension performance.

### RAW NITRO MAX

The heavy weight contender specifically designed for heavy coil sprung and torsion bar vehicles. Nitro Max shocks use a proven truck shock absorber design with highly tuned valving for 4WD applications carrying heavy loads & travel demanding terrain. Recommended for vehicles used in mining, long distance touring & heavy duty applications.

### RAW PREDATOR

Brings together on road prowess & off road durability into a fast acting monotube design. Manufactured in Australia the Predator delivers that elusive feeling of comfort & control. If you use your 4WD for day to day running around & off road adventures on the weekend, the Predator is what you are looking for.
