- Retains Factory Tie Down Points on sides
- System Weight: 25kg (Removal of 3rd row seats & trims saves approx 42kg)
- Easy DIY Installation with full instructions and video
- Fully Australian Designed & Made

Simple Storage

Our floor is designed with your daily convenience in mind. The front section features an accessible storage area under the lip, allowing you to store and retrieve light cargo without lifting a finger. This space is perfect for items you need on hand during your adventures, such as first aid kits, tyre repair kits.

We have also included a rear compartment section for installation of a compressor or any other housings to compliment your build.

Steel Rail Foundations

Not all false floors are created equal! While others stick to outdated, all-plywood designs, we've engineered a hybrid system that takes strength and functionality to the next level.

Our folded steel rails form the backbone of the construction, delivering superior strength where traditional plywood falls short.

The result? A rock-solid platform that won't sag, warp, or rot.

Integrated Hutch

Our design includes a 25L integrated storage hutch, perfect for stashing gear or housing a massive 200Ah battery without eating into your precious cargo space.
