PRE-FILTER KITS

Direction-Plus™ Pre-filters are designed specifically to cope with extreme weather conditions and poor fuel quality on diesel fuel vehicles. We offer a range of Pre-filter kits depending on your needs as **Fuel Manager FM100 series** and **PreLine-Plus**.

These Pre-filters meet the specifications set by leading manufacturers of diesel fuel injection systems, offering **high degree of water separation**, protecting the fuel system from corrosion and abrasion.

OIL SEPARATOR KITS

The **Direction-Plus ProVent** oil separator kits separate oil from the blow-by gases by means of an oil separating element, reducing the amount of oil in the blow-by gases returning to the engine.

Direction-Plus™ ProVent® kits are designed for specific vehicle applications, containing all the required parts to fit a ProVent to the vehicle. For vehicles with no fitment, there are universal kits available that can be retro-fitted to just about anything.

By installing a ProVent you **remove the oil re-entering the engine, avoiding the soot build-up**, preventing the intake manifold from being clogged.

TRANSMISSION OIL COOLER KITS

The **Direction-Plus™ Transchill** Transmission Oil Cooler kits are designed specifically to **reduce excessive transmission heat** caused by:

- Towing;
- Carrying loads;
- Driving in sand, snow or hot conditions;
- Off-roading.

The **Transchill** Transmission Oil Cooler can reduce the temperature of the ATF by as much as 33°C. A reduction of just 11° C can **double the life expectancy** of the transmission, ATF and all internal components.
