## EXPERIENCE INNOVATIVE FILTRATION WITH THE NEW RYCO CONNECT RANGE

As industry leaders, the Ryco engineering team are constantly striving to make new and exciting improvements the Ryco 4x4 Upgrade Kit range.

With the team constantly studying the market and improving the product offering, the New Ryco Connect Fuel Water Separator Wireless Sensor Kit (S102SK) is a culmination of the advances in technology, customer feedback and technical knowledge.

Where previously fuel water separator inspections had to be scheduled and relied heavily on a visual assessment of the bowl and draining when full, this new sensor kit allows users to simply be notified by the Ryco Connect App when it's time to drain the unit.

Introducing something never before seen in the market, the Ryco Connect Fuel Water Separator Wireless Sensor Kit is sure to provide 4x4 owners with the confidence that when they push their 4x4 to the limit, they will be Ryco Ready.

## PRODUCT INFORMATION

### HOW IT OPERATES

Once all parts in the Fuel Water Separator Sensor Kit are installed in your vehicle, it is as simple as:

1. Downloading the Ryco Connect app to your phone and opening the app.
2. Turning on your vehicle to power the in-engine module.
3. Using the app to search for the in-engine module to connect (make sure location services and Bluetooth connectivity are approved through the app).
4. Confirm connection to the in-engine module, press START MONITOR to begin logging data from this sensor, and start receiving notifications.

### THE S102XK BENEFITS

While having a fuel water separator can assist your vehicle's fuel system by filtering water and particulates from the fuel before they ever reach the fuel filter, this is only working if the fuel water separator itself is clean and serviced regularly.

What the Ryco Fuel Water Separator Sensor Kit does is support this line of defence, by ensuring drivers are better aware of what the fuel water separator's servicing needs are. The app allows users to be notified about when it's time to drain the unit without ever having to even get out of the car, meaning all visual inspections are now eliminated.

The wired sensors on the market require long installation times and drilling through the vehicle's firewall, which can cause dust and water access into the vehicles cab. Ryco's new sensor means that chances of dust and water entering the cab are heavily reduced due to no necessary drilling.

## RYCO READY AVAILABLE NOW

### ADDITIONAL ACCESSORIES

Customers can also purchase a separate S101X Bluetooth Indicator that provides an audio/visual alert for S102X, connected in the cabin via the traditional auxiliary 12/24V power adaptor or modern USB-A port. This is especially handy for drivers who can't be on their phone while driving, or for those generally wanting to use their phone less.

The Bluetooth Indicator works alongside the Ryco Connect app, never interfering with phone notifications if you're wanting to use both.

The NEW Ryco Fuel Water Separator Sensor Kit (S102XK) and separate Bluetooth Sensor Indicator (S101X) are the intersection of innovation, engineering and technology that introduces something not seen before to the market. Full product specification sheets can be downloaded from the Ryco website, [rycofilters.com.au](http://rycofilters.com.au).
