torqit
innovation in performance

INTRODUCING MARINETORQ

MarineTorq is the on water division of Torqit. The stainless steel manifolds that MarineTorq are known for were first developed in 1995. Since then, MarineTorq has risen to become recognised globally as an industry leader. MarineTorq manifolds have been built to last over 10 years, in contrast to cast iron manifolds which must be replaced every two years (on average).

MANIFOLDS

MarineTorq stainless steel manifolds are a lightweight, custom made, one-piece construction for both petrol and diesel inboard boat engines. Our unique design eliminates leaks and increases boat performance.

Our manifolds are manufactured from the highest quality marine grade stainless steel. As well as being a barrier against rust, the properties of stainless steel have the added benefit of keeping your system cooler.

The MarineTorq patent one-piece construction has been designed to include; spacers, risers, and an elbow all in one. As there are no joints or gaskets within the manifold design, the risk of gasket failure and rusting is eliminated.

Our manifolds incorporate a large water jacket which securely conceals all internals and provides an extra layer of protection. The jacket increases cooling, allowing the manifold to deliver a better performance output.

- 1 Water mixes with the exhaust gases
- 2 Extractor design for cylinder scavenging for maximum efficiency
- 3 One piece design eliminates the possibility of gasket failure resulting in engine failure
- 4 Only one water inlet which reduces the chances of leaking
- 5 Replacement anode which prevents electrolysis

Key Features

- **ONE PIECE CONSTRUCTION** - eliminates water leakage and rust
- **THICKER & LARGER INTERNAL PIPES** - ensures a cooler engine bay, improved power and fuel economy
- **REPLACEABLE ANODES** - prevents electrolysis and corrosion
- **LIGHTWEIGHT CONSTRUCTION** - save up to 55kgs of dead weight per engine
- **LARGE WATER JACKET** - built to securely conceal all internals, increases cooling and provides an extra layer of protection
- **10 YEAR PRODUCT WARRANTY** - peace of mind on the water!

ANODES

Every MarineTorq manifold includes a sacrificial anode. Our high quality, heavy weight zinc anodes prevent electrolysis and corrosion.

DID YOU KNOW?

When two metals are immersed in salt water and they are physically or electronically connected, they create a current. The electrons that make up the current are charged by one of the metals releasing bits of itself in the form of metal ions. This is called corrosion and if left unattended, it will quickly destroy your metal components.

To counter the corrosion, we add our zinc anode as a third metal into the circuit. This gives up its electrons quicker, keeping your manifold in perfect condition.

PURE POWER & PERFORMANCE IN 3 STEPS

Our three step process targets the most prominent areas of vehicle performance to ensure every customer receives an effective performance upgrade. Our core products target the below issues if all are addressed, a vehicle will be significantly enhanced and perform considerably better.

✓ **Response** ✓ **Power** ✓ **Torque** ✓ **Fuel Efficiency** ✓ **Note**

This information booklet will provide you with the knowledge of what a Torqit product does, what it fixes and what the customer will experience.

This is an overview of the performance increase each product will provide.

STEP 1 -

or MODULEMAP

STEP 3 -
PERFORMANCE EXHAUST

COMBINE FOR THE FULL
PERFORMANCE UPGRADE

PEDAL TORQ

ABOUT

The Pedal Torq units remove throttle lag and provide an enhanced driving experience. A Pedal Torq improves your accelerator response when you are taking off from a stationary position (like traffic lights), assists with overtaking and provides smoother gear changes.

Both units have customisable settings which give a driver the ability to finely tune their vehicles accelerator to suit their personal driving preferences.

The Pedal Torq can be fitted to almost ANY vehicle from 2005 onwards.

IDEAL CUSTOMER

If a customer raises concerns that their vehicle is 'sluggish' or mentions that there is a delay between pressing their accelerator and then moving, you should recommend a Pedal Torq.

Anyone who owns a 4WD needs one of these units fitted to their vehicle. The Pedal Torq will completely change their driving experience by improving vehicle response. The Pedal Torq is excellent for offroading as you can alter the accelerator response, and is also ideal when towing or carrying heavy loads.

SALES TIP

You should fit a Pedal Torq to the customer's vehicle so they can feel the difference. It is difficult to explain an experience, let them understand it for themselves. Remember – we offer a 30 day money back guarantee.

THROTTLE LAG

WHAT IS IT?

Most vehicles utilise a 'drive-by-wire' control system for the accelerator. This means that when pressure is applied to the accelerator pedal it is measured by a sensor which sends the signal to the engine, opening the throttle. The time taken to achieve this is the lag you feel when you accelerate.

THROTTLE LAG FIXED

The Pedal Torq sits between the sensor and the ECU, intercepting the signal to shorten and improve the response time. The Pedal Torq reduces the amount of pedal pressure required to achieve 'wide open throttle' allowing the driver to access the engines full potential.

REAL SCENARIO

You're first in the queue at the traffic lights and you accelerate when you see the green light but nothing happens for a second or two, this delay is what is referred to as throttle lag. A Torqit Pedal Torq removes this lag, so the moment you accelerate you are beginning to gain momentum.

PEDAL TORQ FITMENT

Both the Pedal Torq & Pedal Torq plus units connect to the accelerator pedal. Installation is as simple as unplugging the current accelerator and connecting the Pedal Torq plugs

INSTALLATION TIME

Installation will take less than 3 minutes.

CHOICE OF:

BLUETOOTH APP CONTROL
(PEDAL TORQ PLUS)

DASH MOUNT CONTROL
(PEDAL TORQ)

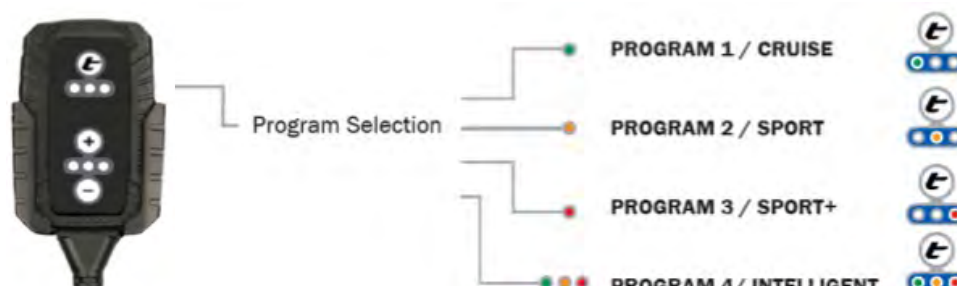

PEDAL TORQ **vs** PEDAL TORQ PLUS

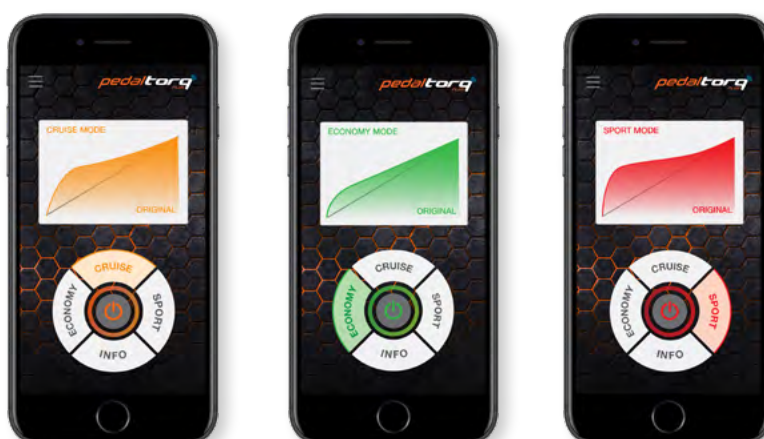

A Pedal Torq is a corded unit which has a controller mounted to the vehicles dash. Both the Pedal Torq and Pedal Torq Plus have three modes, however the Pedal Torq has additional settings per mode, allowing a user to finely tune their vehicle to their driving style. It also comes with additional features (see next page). A Pedal Torq Plus is a refined version. It is operated via the Torqit Connect app and has three modes that can accommodate any driving style. It is ideal for a user that doesn't do much off road driving and wants a set and forget unit.

	PEDAL TORQ	PEDAL TORQ PLUS
Main function	Removes throttle lag	Removes throttle lag
Ideal User	Uses their vehicle on-road & off-road use	Uses their vehicle on-road

PEDAL TORQ MODES

PEDAL TORQ PLUS MODES

PEDAL TORQ

FEATURES & BENEFITS

Use this table to explain to your customer what the benefits are of a Pedal Torq unit.

FEATURE	BENEFITS
Increase throttle response	<ul style="list-style-type: none"> • The vehicle is faster off the mark • Ideal for heavy vehicles and towing as it removes all sluggish behavior • It feels like your vehicle has had a full power upgrade
21 settings	<ul style="list-style-type: none"> • The vehicle can be finely tuned to the customers driving style • There is a setting that can decrease throttle response and is ideal for off road use or rock climbing.
Learning mode	This setting will adapt to your driving style and adjust the response to be ideal for your driving. It means that a heavy foot driver will not have a jumpy take off and a customer with a light foot will receive a noticeable difference in response.
Anti theft mode	Your Pedal Torq acts as an immobilizer for your vehicle, which makes stealing it impossible unless you know how to turn off the mode.
Dash mount control	Easily controlled from your dash. Does not tempt customers to use their phone whilst driving.
Simple installation	Customers do not have to pay for fitting. The unit can be fitted in 60 seconds.
5 year product warranty	The unit automatically comes with warranty which offers customers peace of mind. It also does not void vehicle/factory warranty.
Vehicle suitability	The unit can be fitted to almost any vehicle manufactured from 2005 onwards.
30 day money back guarantee	The product is great and will be loved. We are so confident that the customer will love it, we offer a 30 day money back guarantee.

PEDAL TORQ PLUS

FEATURES & BENEFITS

Use this table to explain to your customer what the benefits are of a Pedal Torq Plus unit.

FEATURE	BENEFITS
Increase throttle response	<ul style="list-style-type: none"> • The vehicle is faster off the mark • Ideal for heavy vehicles and towing as it removes all sluggish behavior • It feels like your vehicle has had a full power upgrade
3 settings	The unit comes with three optimum settings, so the customer can set and forget.
Wireless unit	It does not effect the look of your vehicle as there is no controller mounted to your dash.
App control	<ul style="list-style-type: none"> • The unit is controlled via the Torqit Connect App, the customer will always have the latest technology as the app can be updated. • The app control is unique and gives the customer something to talk about.
Simple installation	Customers do not have to pay for fitting. The unit can be fitted in 60 seconds.
5 year product warranty	The unit automatically comes with warranty which offers customers peace of mind. It also does not void vehicle/factory warranty.
Vehicle suitability	The unit can be fitted to almost any vehicle manufactured from 2005 onwards.
30 day money back guarantee	The product is great and will be loved. We are so confident that the customer will love it, we offer 30 day money back guarantee.

POWER MODULE

ABOUT

The Torqit Power Module is a performance chip that safely unleashes power, torque and fuel efficiency that is lost through factory programming in the vehicles onboard computer. The unit alleviates stress from the vehicle, allowing it to perform to its maximum ability.

IDEAL CUSTOMER

The Power Module is ideal for anyone that is towing a caravan, boat or trailer. The pulling power will be noticed immediately and provide a much smoother and enjoyable driving experience.

SALES TIP

Advise customers that their vehicle will be under considerable stress when towing heavy loads, this stress can impact the life of their vehicle. A Power Module will remove this stress. If available, connect a Power Module to the vehicle and let the customer experience it for themselves. Remember, we offer 30 days money back guarantee.

It is also ideal to quote the power gains they will receive; you can find these in this catalogue, please refer to the appropriate vehicle page for accurate figures.

TOWING TROUBLE

THE PROBLEM

Most 4WD's lack power to perform adequately. After adding cargo or a trailer, the vehicle will be put under immense stress. It begins losing power and using more fuel to try and keep up with the drivers demand.

Driving in these conditions for any period will impact the life of the vehicle.

THE SOLUTION

Torqit's Power Modules sits between two existing plugs in the vehicles fuel operating system and provides instant enhanced power and fuel efficiency.

It removes stress from the vehicle and provides a smoother driving experience without an over worked engine.

HOW IT WORKS

The Power Module significantly improves the air to fuel ratio making the engine operate more efficiently.

In simple terms, it uses less fuel, yet creates more power by maximising the energy output from each drop of fuel.

POWER MODULE FITMENT

This unit can be used as a hardwired or a Bluetooth controlled module. The best part is a customer is not required to choose which one they would like, once the Power Module is installed on a vehicle it is automatically set to the highest performance mode. If they would like to alter the tune, simply download Torqit's Connect app and follow installation instructions.

The unit sits between two existing plugs in the vehicles fuel operating system. As this is located in different areas, depending on the vehicle, ensure you review the vehicle specific fitting instructions.

INSTALLATION TIME

Installation will take approximately 15 minutes.

POWER MODULE

FEATURES & BENEFITS

Use this table to explain to your customer what the benefits are of a Power Module unit.

FEATURE	BENEFITS
Increased performance	<ul style="list-style-type: none"> • Increase in power that they will be able to feel • Ideal for towing heavy loads • Removes stress on the vehicle when towing
Vehicle specific software	<ul style="list-style-type: none"> • The software within the Power Module chip has been specifically designed within the safety parameters of the vehicle. • Peace of mind that the Power Module cannot negatively effect your vehicles performance
3 settings	<ul style="list-style-type: none"> • The vehicle can be tuned to the customers driving style • The customer can control how much power they give their vehicle
App control	<ul style="list-style-type: none"> • The unit is controlled via the Torqit Connect App, the customer will always have the latest technology as the app can be updated. • The app control is unique and gives the customer something to talk about.
Product casing	Heavy Duty Vibration and Water Resistant ABS plastic molded housing.
Simple installation	Installation is simple and can be completed in approximately 15 minutes for most vehicles.
5 year product warranty	The unit automatically comes with warranty which offers customers peace of mind. It also does not void vehicle/factory warranty.
Vehicle suitability	The unit can be fitted to most turbo petrol and turbo diesel vehicles.
30 day money back guarantee	The product is great and will be loved. We are so confident that the customer will love it, we offer 30 day money back guarantee.

MODULEMAP

ABOUT

The ModuleMap uses European race technology to access the full potential of a vehicle. The ModuleMap is an ultra fast and powerful ECU programming tool that allows the factory settings of a vehicle to be calibrated and optimized. The adjustable settings of Torqit's ModuleMap are based on the factory parameters of the vehicle and then enhanced to suit each vehicle platform.

The versatile device allows the user to store 3 map tunes. Also included, is the standard tune of the vehicle, so at anytime, the vehicle can be returned to stock or optimized for increased performance.

IDEAL CUSTOMER

The ModuleMap is ideal for anyone that is looking for optimum performance from their vehicle. The increase in power and torque is instantly noticed, this improvement will assist anyone that is towing a caravan, boat or trailer.

SALES TIP

To help customers understand what parameters the ModuleMap can alter, we recommend discussing the details on page 15. By reviewing the various parameters with a customer, they will have a better understanding of the premium product and performance output they will receive. Below are a few major points that will help close a sale:

- Highlight that the tune they receive is custom to their vehicle, we do not employ a 'one size fits all' approach
- When servicing a vehicle, if an update is performed the ECU is reset. Unlike a remap, a tune can be re-added to a vehicle
- The ModuleMap has three settings that can be easily changed

REMAPPING V MODULEMAP

In principal, a remap and ModuleMap offer a very similar solution. Both alter the parameters within the ECU to optimise the vehicles performance. These applications are ideal for any person that wants to significantly improve the power and torque of their vehicle.

DIFFERENCES

While a remap and ModuleMap are very similar in many ways, there are also significant differences between them.

'Cowboy Tuners' – This term is often talked about in the remapping industry. What it refers to are workshops that offer a remap however will push the limits on every parameter. This raises the risk of negatively impacting the vehicle. The ModuleMap is live tuned by highly qualified vehicle software technicians, when they are writing a tune for a vehicle there are many elements that are considered to ensure the software provided is safe.

Servicing Software Updates – When taking a vehicle for a service, a complete software update might be provided. This update will rewrite the ECU, meaning any alterations made will be reset to standard. For a vehicle with a remap, the data is completely wiped. The ModuleMap, makes it easy and cost effective to re-add the enhanced data. Within minutes a user will have a high performance vehicle again.

Installation – Unlike a remap, the ModuleMap can be completed in the comfort of a person's home (as long as they have a laptop or computer). This means that a person does not have to be left without their vehicle for a day or more. Enhancing a vehicle using a ModuleMap is easier than taking a vehicle to a tuning workshop.

Flexibility – With a ModuleMap unit, a user has three options to choose from. This means they have greater flexibility on how they use their vehicle. For example; cruise mode can be used for every day driving and sport mode can be used for extra power and torque when towing. With a remap, only one tune is provided.

MODULEMAP

THE PARAMETERS

Injection Quantity	Injection quantity is the amount of fuel delivered to an engine cylinder per power stroke. By adjusting the amount of fuel being delivered to an engine cylinder the ModuleMap can increase gas and boost pressure.
Injector Phase	Adjusts the injector cycle to be completed at the exact moment the intake valve starts to open. Fuel begins to evaporate before being sucked into the cylinder. This improves fuel economy and creates more power without raw fuel going into the exhaust.
Rail Pressure	The fuel rail sensor is designed to monitor the fuel pressure that is present at the fuel rail. Ensuring accurate and consistent fuel pressure is critical for maximum and consistent performance. This parameter can be adjusted to optimise atomisation.
Power Limiters	These limiters can be raised or removed using the ModuleMap, this provides increased performance.
Air Fuel Ratio	ModuleMap allows the air to fuel ratio to be adjusted and optimised to safely match the desired boost level, creating more output than the original ratio.
Turbo Boost Pressure	A closed loop calculation that defines the turbo boost and ratio of air going into the vehicle. This parameter can be mapped and precisely controlled.
Injection Timing	Allows more or less fuel to be added and burned. Together with the rail pressure these are the mechanisms used to control how much fuel is being provided to the cylinders timeframe.
Smoke Limiter Maps	This parameter restricts the amount of fuel injected to control incomplete combustion, reducing black smoke and soot that would be caused. ModuleMap can disable/control this feature.
Fuel Load Increase & Decrease	Adjusts the quantity of fuel to be added from the air/fuel mixture in situations where load is either increasing or decreasing as opposed to a steady state or constant load situation.

MODULEMAP FITMENT

The ModuleMap can be installed and calibrated without the need to take your vehicle to a tuning workshop. The easy to use unit can be fitted by any individual with a computer or laptop with a USB port. The ModuleMap is live tuned by qualified vehicle software technicians. This unique feature allows the ModuleMap to be customized to after market modifications such as tyres, snorkel etc.

The unit plugs into the OBDII port which is located in different areas depending on the vehicle. Ensure you review your vehicle manual to find the location of your OBDII port.

INSTALLATION TIME

Installation will take approximately 30 minutes.

MODULEMAP

FEATURES & BENEFITS

Use this table to explain to your customer what the benefits are of a ModuleMap unit.

FEATURE	BENEFITS
Increased performance	<ul style="list-style-type: none"> • Increase in power that they will be able to feel • Ideal for towing heavy loads • Removes stress on the vehicle when towing
Vehicle specific software	<ul style="list-style-type: none"> • The ModuleMap is live tuned by qualified vehicle software technicians • Tailored tune to the vehicle • The tune takes into account aftermarket modifications such as tyres, snorkel etc
Two optimum tunes	<ul style="list-style-type: none"> • Cruise mode has been designed for improved everyday driving • Sport mode is the highest performance output that is ideal for towing heavy loads
Standard tune	A vehicle can always be returned to standard
Physical device	<ul style="list-style-type: none"> • If a tune is removed from the vehicle during a service, it can be re-added • The tune can be changed by the user any time
Simple installation	Installation is simple and can be completed in approximately 30 minutes for most vehicles*
5 year product warranty	<ul style="list-style-type: none"> • The unit automatically comes with warranty which offers customers peace of mind. • Please remember, the ModuleMap may compromise new vehicle warranty.

PERFORMANCE EXHAUST

ABOUT

Torqit Performance Exhausts increase power, torque and fuel efficiency. The systems have been designed to maximise power output and reduce exhaust gas temperatures (EGT). They are one of the thickest mandrel bent systems available in Australia; the thickness combined with a 304 grade stainless steel produces a deep note and guarantees extreme strength.

IDEAL CUSTOMER

Generally, there are two types of people that are looking for an exhaust upgrade.

1. Note & Performance

This customer wants to increase the power from their exhaust and receive a deep note. If available for their vehicle, opt for the resonator option, for a louder more aggressive sound.

2. Touring & Towing

Increase power and torque from their exhaust while also reducing exhaust gas temperatures (EGT).

SALES TIP

We have created several exhaust note videos. Check our YouTube channel to see if your customers' vehicle has a video of the note.

It is also ideal to quote the power gains they will receive; you can find these in this catalogue, please refer to the appropriate vehicle page for accurate figures.

DPF DELETE

A Diesel Particulate Filter (DPF) prevents toxic emissions being emitted from the vehicle.

All late model diesel vehicles are fitted with a DPF. A DPF restricts exhaust flow which causes a decrease in power and exhaust note.

THE DELETE

To receive more power and a better note, some people delete (remove) their DPF. This is illegal and will void warranty and insurance, making the vehicle unroadworthy.

If you are found to have a DPF delete, you may be open to thousands of dollars of fines and repairs.

DPF BACK EXHAUST

Torqit have developed a DPF back performance exhaust that can get real power gains and a deep exhaust note.

The performance exhaust improves flow, reduces exhaust gas temperatures (EGT) and produces more power. A DPF back exhaust is ideal for towing and off road applications.

PERFORMANCE EXHAUST FITMENT

Torqit Performance Exhausts have been manufactured to maximise power, torque and fuel efficiency for both DPF and pre DPF turbo diesel vehicles.

All Performance Exhausts are full bolt together systems, so customers have the option to fit the exhaust themselves or organise it to be fitted through their local stockist.

Fitment time depends on the exhaust system, if you have a hoist available and your experience on tools.

INSTALLATION TIME

Installation of a Performance Exhaust, can take anywhere from 60 minutes to 3 hours

PERFORMANCE EXHAUST

FEATURES & BENEFITS

Use this table to explain to your customer what the benefits are of a Performance Exhaust.

FEATURE	BENEFITS
Thick stainless steel (1.7mm-2mm)	<ul style="list-style-type: none"> • Produces a deeper note • No cabin drone • Extremely hard to crack
304 grade stainless steel	<ul style="list-style-type: none"> • The system will not rust • It is the best material to use on an exhaust due to its superior strength, doesn't rust and last longer than 409 stainless steel
Full automatic mandrel bent system	<ul style="list-style-type: none"> • Perfect bends every time • Easy installation as the size will always be correct
Titanium coated dump pipes	<ul style="list-style-type: none"> • Assists with heat dispersion • By keeping a system cooler it will lengthen its lifespan
Double braided stainless steel flex bellow	<ul style="list-style-type: none"> • The double braid is twice as reinforced and will not allow gas to escape • Allows movement on the vehicles chassis, so an exhaust system will not crack
High flow diesel catalytic converter	<ul style="list-style-type: none"> • It is diesel specific so it can withstand pressures and temperatures of a diesel engine • It is more expensive but will last longer. Many competitors use a petrol catalytic converter that will break down over time
Internal & external welds	<ul style="list-style-type: none"> • Increases the strength of welds • Makes it extremely hard to crack
Bolt together system	Customers have the choice to fit the exhaust themselves or pay for fitting through a local stockist. On average, an exhaust will take 2-3 hours to fit.
10 year product warranty	The unit automatically comes with warranty which offers customers peace of mind. It also does not void vehicle/factory warranty.
Vehicle suitability	Broad range of turbo back and DPF back systems for most 4WD vehicles.

PRE DPF 200 SERIES PERFORMANCE EXHAUST

TITANIUM COATED DUMP PIPES

The coating helps with heat dispersion, keeping your engine bay cooler and protecting your engine and its components.

TWIN DESIGNED PYROMETER FITTINGS

Fittings to suit EGT/AFR fittings.

DOUBLE BRAIDED FLEX BELLOWS

The double braid is twice as reinforced, and will not allow gas to escape. The flex bellows allow for movement on the vehicle's chassis, this extra movement means the exhaust system will not crack.

HEAVY DUTY WRAP AROUND BRACKETRY

Our heavy duty bracketry reduces the risk of fracture on your system by reinforcing the stress points on the exhaust.

INTERNAL & EXTERNAL WELDS

All Torqit Performance Exhausts have internal and external welds to increase the strength of the exhaust system. The reinforced system makes it extremely difficult to crack, even in tough off-road applications.

THICK STAINLESS STEEL

All Torqit exhausts have a thickness of 2mm on the straights and 1.7mm on the bends. This thickness produces a deeper note without cabin drone. It also is extremely difficult to crack, so you can go off road with peace of mind that your system will stay intact.

INTERCHANGEABLE COMPONENTS

The majority of Torqit exhaust systems have the choice of a louder or quiet option.

HIGH FLOW DIESEL CATALYTIC CONVERTER

Our exhaust systems focus on increasing flow capacity to allow the engine to breathe more freely. An increase in flow means the cat has to work harder and faster. Our high flow diesel specific cat converter's have an extremely high precious metal content to ensure emissions are controlled.

304 GRADE STAINLESS STEEL

304 grade stainless steel is the highest quality material used for exhaust systems. The premium steel will not rust and is much stronger than 409 grade stainless.

MANDREL BENT SYSTEM

Mandrel bending supports the exhaust pipe from the inside as it is bent, this prevents crinkling of the pipe. The results are smooth and constant diameter bends that reduce restriction and improve both the performance and efficiency of your engine.
