WHY CHOOSE SABER OFFROAD?

Australia has a rich tradition of developing world-class off-road accessories. Saber Offroad was born to stand out from the crowd and make the best off-road recovery products available not just in Australia, but anywhere. The Saber Offroad range delivers our customers superior quality, value for money, ease of use, and above all safety.

We specialise in recovery products...the sort of things you'll only ever need when you're stuck and so we work harder to make sure they perform when you need them most. All the recovery products at Saber Offroad are designed and independently tested here in Australia.

! SAFER

Here at Saber, we test all of our products to their limits and beyond. All our rated gear is tested to destruction in an independent NATA (National Association of Testing Authorities) Lab. Rather than purely relying on a lab test, we also test our gear in the harshest real world conditions.

You'll see batch numbers and contact details on all our products and giving you confidence they have been tested and meet or exceed ratings shown. More than that, our products meet all applicable standards and are always labelled accordingly. We want you to be as confident in our products as we are.

SMARTER

Our research and development team have worked hard to produce the world's best recovery gear. From our rope coatings through to the grades of our alloy we use in our accessories, all have been researched and selected because they're the best solution for the job.

And, where it doesn't exist or we don't believe it's up to scratch, we'll research and develop our own solutions, like our SaberPro® Fibre. This proprietary fibre has allowed us to make products that are the toughest on the market. And, because we're stronger together, we work closely with the team at the Australian Automotive Innovation Centre (AIC) and our NATA testing labs to gives us access to first-rate testing machinery and engineering excellence to assist in the development of world-class products.

STRONGER

Our aim is to make sure our products are the strongest and most durable in the market. That's why we spend so much time researching and testing materials or developing our own, like the SaberPro® Fibre. From the design of knots used on our soft shackles, through to bend radius on our recovery rings and more, we are constantly improving our products to make sure they lead the world.

The reason we research, develop and test so much is because we know our gear needs to perform when you need it most.

WHAT IS A KINETIC RECOVERY ROPE— AND WHY IT'S BETTER?

Our kinetic ropes are purpose-built to stretch up to 30% of their length under load. Compared to conventional straps, our ropes eliminate the “yank,” as the rope stores the towing vehicle’s momentum and releases it smoothly, pulling the stuck vehicle free with less shock to both vehicles.

50K KINETIC ROPE

To choose the right rope, start with your vehicle's **GVM** (loaded weight). The practical rule is simple:

Pick a kinetic rope with a Minimum Breaking Strength (MBS) of between 2 to 3 times your vehicle's GVM.

It is best to try to have your rope suit lighter vehicle in the recovery. If a Hilux (lighter) is recovering a Landcruiser (heavier), choose based on the Hilux's GVM so the rope actually stretches when the lighter vehicle applies the pull. We know it's tough to know what vehicles will be involved in a recovery so we suggest always having a rope that suits your vehicle.

WHY CHOOSE SABER SOFT SHACKLES?

SCAN TO SHOP
THE FULL RANGE

Saber Offroad soft shackles are engineered to deliver a safer, smarter, stronger alternative to traditional steel shackles. Our wide range of recovery soft shackles are constructed with our exclusive SaberPro® Fibre and our patented Technora® cut-resistant binding, they are built to deliver the highest standard in strength and durability, giving you the confidence when recovery matters most.

Trusted by 4WD experts and enthusiasts around the world, Saber Offroad soft shackles are also used in military, agriculture, and mining applications.

RECOVERY RING VS SNATCH BLOCK: WHICH IS BETTER FOR YOUR RECOVERY?

Whether you choose a **Saber Ezy-Glide® Recovery Ring** or a **Saber Super Light Snatch Block**, both are engineered to maximise recovery performance while reducing weight and protecting your recovery gear. Designed specifically for use with soft shackles and synthetic winch ropes, every Saber pulley solution is precision engineered and independently tested to deliver dependable real-world performance.

EZY-GLIDE® RECOVERY RINGS

A lightweight, compact alternative to a traditional snatch block, engineered to maximise capacity while minimising rope wear.

- **Engineered to Maximise Capacity & Minimise Rope Wear**
Optimised geometry helps reduce rope fatigue, friction, and fibre compression.
- **Free-Form Central Core**
Enhances soft shackle support while reducing friction throughout the recovery system.
- **Heavy-Duty T6 Billet Aluminium**
Precision-machined for exceptional strength, durability, and long-term reliability.
- **Lightweight & Compact**
Delivers the capability of a traditional snatch block while saving valuable weight and space in your recovery kit.

**EZY-GLIDE 12,500KGS WLL
RECOVERY RING & BAG**

SUPER LIGHT SNATCH BLOCKS

Combining cutting-edge materials with precision engineering to deliver exceptional strength with significant weight reduction.

- **Super Lightweight Design**

Starting from just 1.5kg, delivering capacities up to 24,000kgs with outstanding strength-to-weight performance.

- **Two Sheave Options**

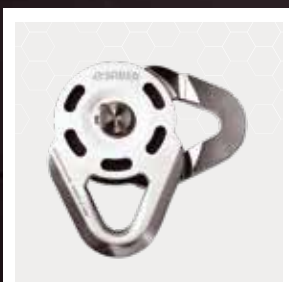

Choose the Polymer Sheave for synthetic rope, or the Stainless-Steel Sheave for synthetic rope or steel cable.

- **Optimised for Modern Recovery**

Engineered with a 112mm internal channel diameter to better support rope under heavy loads, reducing rope flattening and extending service life.

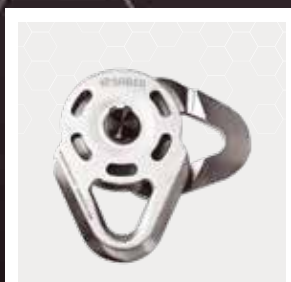

- **7075 Aviation-Grade Alloy**

Precision-machined for exceptional strength, corrosion resistance, and long-term durability in demanding recovery environments.

BEST 4WD RECOVERY KIT ESSENTIALS: ***THE SABER OFFROAD GEAR YOU NEED FOR A SAFER RECOVERY***

Before you leave the bitumen and head off-road, it's important to make sure you have the right recovery gear to get you home safely. Whether you're a beginner or a seasoned off-roader, choosing quality recovery equipment that's matched to your vehicle, the terrain, and the type of recoveries you're likely to perform will give you the confidence to tackle your next adventure.

Saber Offroad offers a complete range of recovery solutions, from Kinetic Recovery Kits through to Winch Recovery Solutions and Ultimate Recovery Kits, ensuring you're prepared for almost any recovery situation.

KINETIC RECOVERY ROPE KITS

Saber Offroad Kinetic Recovery Kits have been created to ensure you have everything you need to perform your next recovery safely. Available in a range of weight ratings, each kit is designed to match your vehicle and includes the essential recovery gear for safe vehicle to vehicle recoveries.

SCAN TO SHOP
THE FULL RANGE

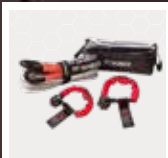

KINETIC RECOVERY KITS

Includes a kinetic recovery rope and sheath soft shackles, allowing you to safely connect both vehicles using suitable rated recovery points.

WINCHING KITS

Everyone wants lighter and stronger recovery gear, and Saber winch recovery solutions have you covered. Whether you're preparing for a simple winch recovery or building a complete recovery system, our Winch Recovery Kits, Recovery Ring Kits and Bridle Kits are designed to replace heavy, potentially dangerous steel recovery hardware with modern, lightweight alternatives.

WINCH RECOVERY KIT

Saber Winch Recovery Kit provide a lightweight, safer alternative to traditional winch recovery setups. Replacing heavy steel snatch blocks and bow shackles with modern recovery solutions, this kit is designed to reduce weight while providing everything you need for safe winch recoveries.

WINCH RECOVERY KIT
SKU: SBR-WRK2

Lightweight Recovery System

Replacing traditional steel recovery hardware, the complete kit weighs little more than a conventional snatch block and bow shackle.

Complete Winch Recovery Solution

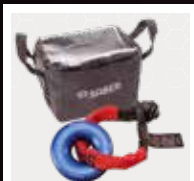

Includes a Saber Ezy-Glide® Recovery Ring, Tree Trunk Protector, Protective Sheath Soft Shackle, HDX Technora® Soft Shackle and gear bag.

Protects Your Recovery Gear

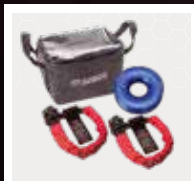

The Ezy-Glide® Recovery Ring is engineered to maximise capacity while minimising rope wear, while the Tree Trunk Protector helps protect trees from the abrasive effects of ropes and cables.

RECOVERY RING KITS

Saber Recovery Ring Kits combine the Ezy-Glide® Recovery Ring with premium soft shackles to create a lightweight, compact alternative to traditional snatch blocks.

**EZY-GLIDE 12,500KGS WLL
RECOVERY RING, BAG &
SHEATH SOFT SHACKLE**

Billet T6 Aluminium Construction

Precision-machined from billet T6 aluminium with a durable anodised finish for exceptional strength and corrosion resistance.

Engineered for Synthetic Winch Rope

Engineered for the optimal bend radius for synthetic winch ropes up to 12mm, helping reduce rope wear and maximise performance.

SaberPro® Soft Shackles with Protective Sheath

Built for everyday recovery, combining premium SaberPro® Fibre with an abrasion-resistant protective sheath for lasting durability and reliable performance.

BRIDLE KITS

The Saber Bridle and Soft Shackle Kits are designed to spread the load of a recovery across multiple recovery points, helping improve safety and performance during winch recoveries. Available in three sizes to suit different recovery loads.

- **Even Load Distribution**

Spreads the recovery load evenly across multiple recovery points, helping reduce chassis twist and improve recovery stability.

- **Three Sizes Available**

Available in 9,000kgs, 12,000kgs and 16,000kgs options, matched to 4,000kgs, 8,000kgs and 12,000kgs kinetic recovery ropes.

- **Complete Recovery Solution**

Includes a heavy-duty bridle and SaberPro® soft shackles with Protective Sheath, ready for safe winch recoveries.

WHY CHOOSE A SABER ULTIMATE RECOVERY KIT?

The Saber Ultimate Recovery Kit is the complete recovery solution, combining kinetic and winch recovery equipment to prepare you for almost any recovery situation. Carefully matched to your vehicle, each kit contains the essential recovery gear needed to get you home.

- **Complete Recovery Solution**

Combines kinetic and winch recovery equipment in one comprehensive kit.

- **Premium Recovery Components**

Includes a kinetic recovery rope, sheath soft shackles, HDX Soft Shackles, winch extension rope, recovery ring, tree trunk protector, winch damper, gloves and gear bag.

- **Matched to Your Vehicle**

Available in multiple weight ratings, ensuring your recovery gear is correctly matched to your vehicle and recovery requirements.

THE FULL RANGE

Traditional winch hooks have remained largely unchanged for decades. The Saber Alloy Winch Shackle Range was developed to provide a safer, lighter and stronger alternative, purpose-built for modern synthetic winch ropes and soft shackles.

Precision CNC machined from aircraft-grade 7075 aluminium and finished with premium coating, every Alloy Winch Shackle delivers exceptional strength, durability and corrosion resistance. Designed exclusively for use with soft shackles, the range provides a secure connection while helping protect synthetic recovery gear from damage.

Individually batch tested at a NATA-accredited laboratory and engineered to attach seamlessly with Saber's Rubber Fairlead Engagement Pads (RFE), the Saber Alloy Winch Shackle Range represents the next evolution in safer, smarter vehicle recovery.

HAWSE FAIRLEADS: BUILT FOR SYNTHETIC WINCH ROPES

SCAN TO SHOP
THE FULL RANGE

Saber Haws Fairleads are precision CNC machined from 6061 aluminium and engineered specifically for synthetic winch ropes. Available in Standard, Chunky, and Offset designs, each fairlead is designed to reduce stress on rope fibres during higher-angle pulls, helping extend rope life and improve winching performance.

- **OFFSET HAWSE FAIRLEADS**

Features Saber's exclusive Fatlip opening, providing a greater bend radius than standard offset fairleads while reducing stress on rope fibres during higher-angle pulls.

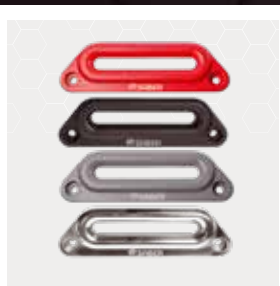

- **STANDARD HAWSE FAIRLEADS**

Our heavy-duty all-rounder, featuring double the thickness of many standard fairleads for exceptional strength.

- **CHUNKY HAWSE FAIRLEADS**

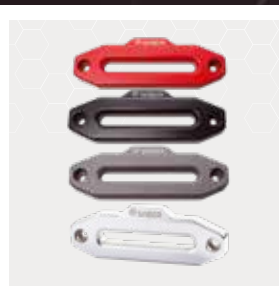

Designed with one of the largest bend radii available to better support synthetic winch rope under load.

WINCH ROPES & EXTENSIONS: STRENGTH WITHOUT THE WEIGHT

The Saber Winch Ropes are engineered to replace traditional steel winch cable with a lighter, safer alternative. Manufactured using exclusive SaberPro® Fibre, they deliver exceptional strength, durability and handling for modern recovery systems.

WINCH ROPES

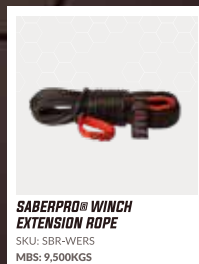

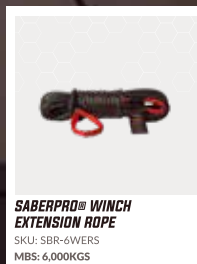

- **Available in Two 30 Metre Constructions**
Single Braided and Double Braided.
- **Exclusive SaberPro® Fibre**
Premium high-strength synthetic fibre construction.
- **Lightweight Alternative**
Safer and easier to handle than traditional steel winch cable.
- **Designed for Modern Recovery Systems**
Engineered for use with synthetic rope recovery equipment.

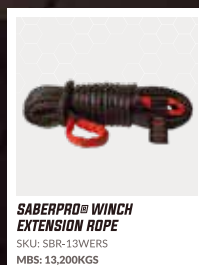

WINCH EXTENSION ROPES

The Saber Winch Extension Ropes provide an additional 20m of length when your winch rope alone isn't long enough to complete a recovery. Manufactured using exclusive SaberPro® Fibre and fitted with protected sheathed eyes, they deliver exceptional strength and durability. Each rope only weighs 1/3 of the equivalent strap, making it a true recovery gear weight saver.

- **Available in Three Ratings**
6,000kgs, 9,500kgs and 13,200kgs.
- **Exclusive SaberPro® Fibre**
Premium high-strength synthetic fibre construction.
- **Protected Sheathed Eyes**
Provides increased protection against abrasion and wear.
- **Lightweight & Easy to Handle**
A safer, lighter alternative to traditional extension straps.
