

Your Advantage in Automation

About HMPS

HMPS designs and manufactures automated packaging solutions in Australia.

Founded in 1980 to serve South Australia's wine industry with bag-in-box machinery, HMPS has grown into a national automation partner, delivering customised systems across food, beverage, dairy, pharmaceutical and industrial markets.

With local service teams across Australia, 24/7 remote support and expertise across filling, packing, palletising and wrapping, HMPS helps manufacturers improve efficiency, safety, reliability and long-term line performance.

Our Customers

HMPS supports food, beverage, dairy, pharmaceutical and industrial manufacturers seeking reliable automation, reduced manual handling, stronger throughput and locally backed service across Australia, New Zealand and export markets.

Machinery Range

Bag In Box

Bag-in-box systems package liquids, semi-liquids and viscous products by placing filled flexible bags into sturdy cartons, supporting hygienic handling, efficient storage, accurate packing and reliable transport.

Case Packing

Case packing systems automate the packing of cartons, trays or sleeved products into cases, improving line speed, presentation, consistency, product protection and readiness for safe distribution.

Liquid Filling

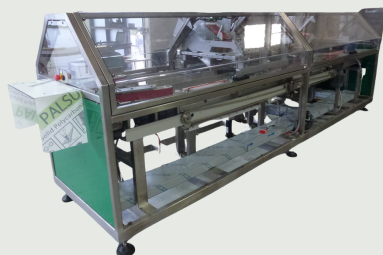

Liquid filling solutions handle pumpable liquids, pastes and sauces, including aseptic and extended shelf-life applications, helping protect freshness, filling accuracy and product integrity.

Robotic Palletising

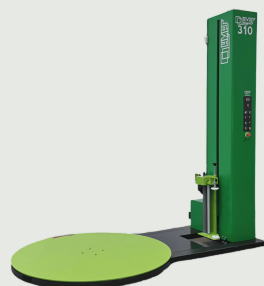

Robotic palletisers deliver consistent, high-throughput palletising while reducing manual handling. Options range from Cobots to floor-based cells to integrated systems with guarding, conveyors, stackable pallets and stretch wrapping.

Sleeving

Sleeving systems apply sleeves to products such as ready meals, improving presentation, packaging accuracy and end-of-line productivity while reducing manual labour, costs and handling risks.

Stretch Wrapping

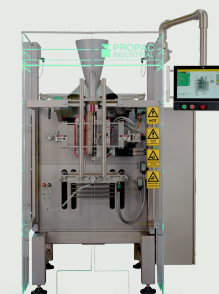

Stretch wrapping machines secure pallet loads for transport with reliable, automated wrapping, helping protect finished goods, improve operator safety and streamline the final dispatch stage. From semi auto units to line integrated fully automatic systems.

Tub Filling

Rotary tub fillers dispense tubs, fill product, seal foils and place lids in a hygienic stainless-steel system suited to dairy, dips, sauces, spreads and desserts.

Vertical Form Fill Seal

VFFS machines form, fill and seal bags for food and non-food products, supporting pouch formats, powder filling, pumpable products and hot-fill applications in intermittent or high speed continuous formats.
