Everything you need to master your manufacturing process.

Improve efficiency.
Reduce waste.
Trust processes.
Increase profits.

Made for manufacturers, by manufacturers.

OFS is a manufacturing solutions company that draws upon years of production experience from a group of dedicated experts. We help manufacturers of all shapes and sizes take action on what matters to them in the short term, and into the future. OFS collects vital information on how your manufacturing line is performing and turns that data into valuable insights about your business, so you can quickly understand how to reach your goals.

Your success is our success and with OFS, you'll have access to a team of manufacturing experts that live and breathe manufacturing.

OFS empowers people to act faster, make better decisions and push manufacturing to new heights — every minute of every day.

Be the master, with OFS.

Collect and analyse line data instantly

Make smart decisions, faster. Collect manufacturing performance and OEE data from your production lines in real-time. Enrich your data with operator commentary on events or issues providing a deeper layer of insight. Optimise the performance of each line against benchmarks and targets.
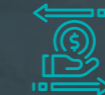

Start conversations backed by facts

Information is organised and presented to identify opportunities for improvement quickly. Straightforward metrics help engage staff and stakeholders to create a culture of conversation driving continuous change.

Take actions that matter

Empower your production team to prioritise, respond to issues and achieve results fast with information at their fingertips. OFS allows operators to quickly and easily provide feedback coupled with accurate real-time data, while managers can use information to eliminate inefficiencies on the factory floor.

Maximise ROI on machinery

Evaluate asset performance and provide financial justification for machinery investments. Achieve real return on investment when maintaining and replacing equipment, and understand the true cost of machine inefficiencies.

Overcome the barriers to your goals

Identify lost time in production, such as unplanned downtimes. Monitor changeovers, planned downtimes, and reveal slow running lines and machinery. Record waste and find bottlenecks.

Act fast, with confidence

With live information and automated alerts, OFS ensures that the right people are aware of what's happening on the factory floor, where attention is needed, and what to do next.

Automation that empowers.

The OFS Operator Console presents live automated production data in an easy, quick-view format so that operators can gain visibility on the information that matters, fast. Instantly record notes and feedback against any downtimes, production events and also add details on shifts and jobs in just a few clicks.

Live dashboard

See what your operators see, including OEE metrics and target completion times, so you can provide better support and take action as events happen. Plus give access to other teams, like logistics and warehousing, so they can prepare for the next job.

Production line status

Information is displayed using clear traffic light colour coding – red for unplanned downtime, blue for planned downtime, yellow for changeover, dark green for running, and lime green if the line is running slowly.

Line speed

See the current speed against the target speed of the production line.
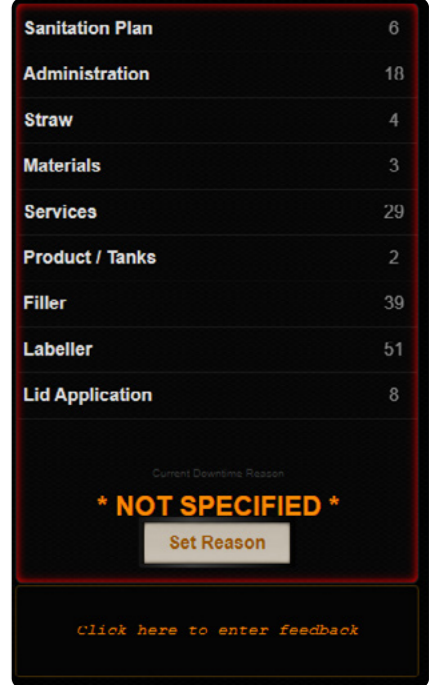

Job progress

See live information on how you are tracking against the production plan, so you can perfectly time other activities, like logistics and warehousing. Configure alerts to notify logistics to prepare trucks when a job is close to completion.

Monitor downtime

Easily log downtimes in a matter of a few clicks and get a clearer picture on the true cause of lost time and where to focus to improve.

Access to real-time reports and analytics.

With detailed and accurate reports curated through OFS, you can finally uncover the data to identify where your plant can perform better and what your key production constraints are.

Downtime reporting

With OFS reports, you can analyse downtime data (including the impact from different products and crew), perform root cause analysis and easily identify the main causes of your downtime so you can fully understand where your focus should be to drive improvement.

Here for you, every step of the way.

Outperform what you think is possible.

Whether you're looking to grow profits, reduce wastage or get greater visibility across manufacturing processes and performance, we'll be by your side to make your 'what if' a reality.

Build a paperless factory.

Our specially designed module for manufacturers lets you replace paper forms on the factory floor, streamline information collection and get audit-ready with confidence.

Validation

Flow checks and validates operator-filled information in the form using to ensure product data is within specification.

Customised forms

Design, build, edit and control your own digital forms and workflows.

Real-time triggers

Flow responds to events on the production line and triggers the right form at the right time. Operators don't need to remember when to complete forms or risk forgetting a check, saving valuable time.

Workflows

Streamline and automate processes by making sure the right form triggers the right action by the right person. And then build workflows and specific actions based on the outcomes of a form.

Form reporting

Review form reports to evaluate quality, compliance and traceability to identify where you can improve your processes.

Auditing and traceability

Reduce the audit process to minutes. Access all records in an instant digitally via OFS.
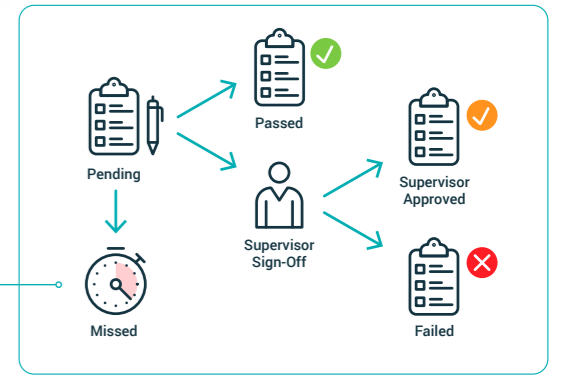

Form expiry

Ensure forms aren't left open and incomplete indefinitely. Customise the expiry time of digital forms displayed on screen and set a deadline for when operators should complete the form.

Get started for free.

This is not your typical 30-day trial. Our goal is to make sure you have the knowledge, tools and support you need to make an informed decision about whether OFS is right for you – without any cost to your business.

We'll kick off with a discussion to outline your success criteria together, so we know what you're shooting for. Our team will help you get up and running fast. To ensure you feel confident with OFS from day one, we will provide free training tailored to your staff and operations.

At the end of the trial, if you need us, we're here to help you evaluate the software so you can move with 100% confidence that OFS is right for you.

- ✓ Dedicated training to help you get the most out of OFS
- ✓ Unlimited access to our customer portal with video tutorials, guides and more
- ✓ Solve issues fast with a dedicated support team, available by phone and online

You're in good company.

Join these businesses who have mastered their manufacturing process with OFS and skyrocketed their productivity.

Questions? Talk to the masters that know manufacturing.

Book a quick demo and chat with one of our manufacturing experts. We'll walk you through how OFS will help you master manufacturing, and provide you a step-by-step guide to getting started.
