About SHINING

Shining Aluminum Packaging Co., Ltd, is one of the China leading manufacturer of aluminum bottle, aluminum jar, aluminum cup, and other unique aluminum packaging for global consumers in wine, vodka, beer, energy shot, olive oil, soft drink, coffee and health drink.

Our cups are made from pure aluminum which is 100% recyclable, making them eco-friendly. Shaped by spinning, our cups can be decorated with variety of printings. Process of anodizing makes the cup suitable for containing drinks directly and dishwasher safe, which has passed FDA and LFGB regulations already.

PROCESS

ADVANTAGE

Lightweight

Aluminum is one the lightest metal materials in the world. Aluminum cups weigh 80% less than equivalent size of glass cups. Hence, it is much more fuel efficient during the maritime transportation.

Formable

The formability of aluminum allows for the manufacture of shape cup. The metal's malleability also means that aluminum packaging can be easily deformed without losing its barrier integrity.

Conductive

Aluminum has a thermal conductivity at the top of the range for metallic alloys, making it ideal for applications that minimise heating and chilling times and energies, such as a cold drink cup.

Recyclable

Aluminum is one the most recycled materials in the world. Recycling aluminum saves more energy than what needed to make new one.

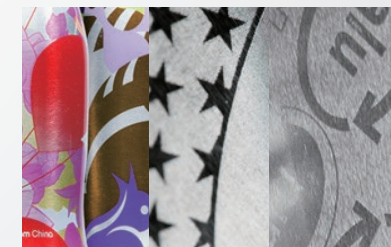

Protective

Compared with plastic and glass cups, aluminum cups are durable enough and hard to be broken or out of shape over use and washing. They are reusable, recyclable and environment friendly.

Decorative

Aluminum's diverse range of finishes plus its compatibility with all printing technologies provides designers with enormous scope to create packaging with stunning graphic design, shelf presence and brand identity.
