Product Platform Information

SPIRAL VEYOR® SVS-SERIES

For single file bottle handling, primary packs and pharmaceutical items

- Continuous elevator
- Compact buffer
- Extreme small footprint
- High throughput
- Patented design

PPI

The introduction of the AmbaFlex SpiralVeyor® SV in the mid-nineties sparked a revolution in material handling. Paired with a simple and robust design, the space-saving machine provides an effective solution to the traditional issues associated with overcoming height differences.

The SVs platform is designed for the transportation of small items and is based on the same proven Triple E roller guide technology as the rest of the SV family. The belt design allows for a very compact machine which saves valuable floor space. The SVs platform is available in various configurations to suit the most challenging applications.

The SVs range

The single track SVs comes in 100, 140 and 200 mm wide belt, with a choice of total diameter to optimize between space, product height and stability.

The multi track SVs, with up to 4 tracks in parallel, has two different varieties. A compact variant, with the smallest attainable footprint and an extended variant, which is maximised to fit shipping regulations.

Different combinations of belt widths and tracks, or special diameters are available in our Customized Programme.

Distinguishing features

- Saves up to 80% floor space
- Super flat belt top for unstable products.
- Multi track options
- Portal ONE possible, with two spirals with one ongoing belt.

Technical specifications

- Material configurations: Mild steel, coated / high corrosion resistant / stainless steel wash down (100% stainless, no soft metals used).
- Elevation up or down (or reversible).
- Loads of up to 50 kg/m.
- Belt speeds: normal range 50m/min, 75m/min with high speed package, higher speed is also possible, please consult AmbaFlex with specific application scenario.
- Angle of incline 2.5° 18°.
- Elevation up to 20 windings per drive, stackable to unlimited height.
