

STAINLESS STEEL CONVEYORS

Smalte's comprehensive range of hygienic conveyors features stainless steel construction & special clean design for easy wash-down.

These conveyors are most appropriate for dairy & food manufacture, as well as pharmaceutical, cosmetics and chemical industry applications.

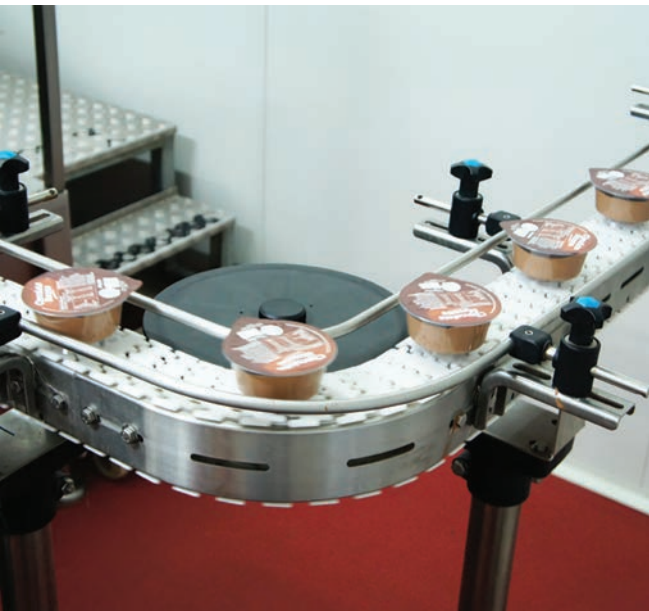

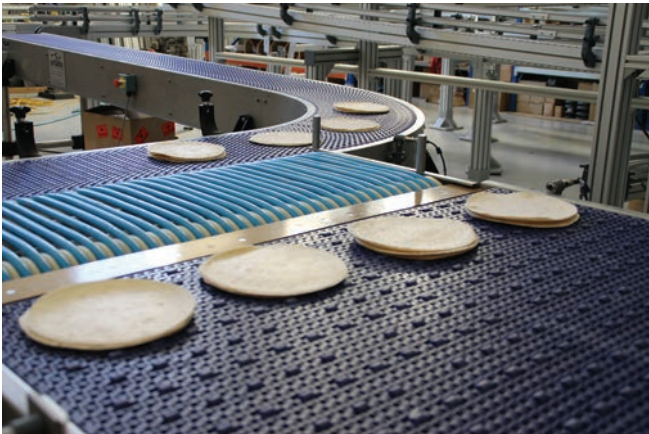

The modular stainless steel components combine to create the same innovative solutions as the more common (aluminium) systems, including accumulation & elevation systems.

Clean lines, combined with high resistance to aggressive chemicals & wash-down, make this design ideal for dairy & other wet food environments.

SPECIAL FEATURES INCLUDE

- 304 stainless steel construction
- Drain holes for wash-down
- Available in a range of conveyor widths
- Fast delivery, through modular assembly, without welding
- Enhanced motor protection
- Range of specialist solutions including elevation and rinsing

SOLUTIONS FOR HYGIENIC ENVIRONMENTS

- Transport - slat chain, PVC belt, modular belt
- Cleanroom applications
- Elevation systems
- Air Rinsing, CIP & washdown environments
- Wire mesh belts
- Cooling spirals
