Superior Pump Technologies

## YOUR PARTNERS IN FLUID TRANSFER

## SPXFLOW approves Superior Pump Technologies as first Certified Repair Centre in Australia

As a part of its continuous process improvement programme, SPXFLOW, a US based food and beverage machinery OEM has approved Superior Pump Technologies in NSW, Australia as a certified repair centre.

## First Certified Repair Centre in Australia

Superior Pump Technologies is a long term SPXFLOW sales channel partner specialising in Waukesha Cherry-Burrell products. Last year APV, Bran Luebbe and Johnson pumps were added to the SPT portfolio.

SPT are well known for the ability to focus on providing second to none quality of work, customer service and satisfaction. Customers can expect highest level of service from SPT with no price impact compared to dealing with SPXFLOW direct.

Workshop certification expands Superior Pump Technologies' service capabilities with both in-situ and off-site pump, valve, homogeniser and heat exchanger service and repairs. Customers are guaranteed that only genuine SPXFLOW spare parts will be used during repair, which ensures performance and reliability of equipment.

Superior Pump Technologies offers their customers technical expertise and extensive experience in food and beverage, dairy, petfood, pharmaceutical and other industries requiring sanitary equipment. We have the ability to size pumps and valves to suit clients' applications, design, manufacture and assemble pump and drive units with minimal lead time supported by large stock of pumps and spare parts at our Chipping Norton facility.

## **Quality Original Parts**

Even though original parts may cost more than non-branded replacements, they are designed to protect your pump, your process and to minimise your total cost of ownership over the lifetime of the equipment.

Quality, performance and compliance are all factors in selecting the correct technology to ensure profitable production. Genuine SPXFLOW spare parts play a critical role in maintaining and protecting a plant's performance. Quick savings offered by "might fit" part may look appealing, but could be costly to your operation in the future due to downtime caused by potential equipment failure or contamination of process fluids.

Unit 23, 31 Governor Macquarie Drive Chipping Norton NSW 2170 Australia ABN: 75 381 847 160
