

OKI PRO 1050/1040

Nowadays high-value duty machines are not considering small or narrow-format label print jobs, but the PRO Series Label Printer can successfully fulfil that gap. OKI PRO-1050 label printer is a combination of LED and dry toner technology.

One of its most important advantages, compared to OKI PRO-1040 (CMYK) is the addition of white toner making the design of your labels more flexible. The white toner option can be used as a background on clear media, perfect for labels placed on glass or even metallised media.

PRO Series Label Printers had been tested under EU rules to guarantee a long-lasting performance and are capable to print GHS and ISO labels.

The LED dry toner technology delivers a high resistance to environmental impact, making labels water, temperature and UV resistant.

This quality is useful when labels are printed for products expose to different temperatures, light or even outdoor conditions.

OKI PRO-1050 is ideal for chemical industry and horticulture, where labels require a standard of resistance to different substances and durability.

The high-quality labels can be also use in cosmetic industry, food, beverage, electrical devices etc.

It offers personalized and highly individual labels, removing delays as labels can be printed immediately from your design application. Quantity of printed labels can be easily modified, from a single label to many thousands, guaranteeing vibrant colors and high quality.

Perfect for on-demand printing, supporting different types of media, including textured papers and synthetics. Consumables have a high capacity and are easy to replace. Internal design is simple making its maintenance easier.

OKI PRO-1050 is easy to configure and cost effective to manage, making printing jobs simpler. It provides manufacturers and small business the ability to offer on demand short run color label printing services.

This is a printer that offers a high efficiency for a low capital investment, for users requiring on-demand printing.
