

## BONDED/HOT MELT STRAPPING

Bonded strapping, otherwise referred to as hot melt strapping, has many advantages over conventional manually applied products such as steel straps, metal banding, rope, plastic straps and stretch film. Compared to these products bonded strapping is applied in a faster, safer and more cost effective way.

The bonded strapping can be joined by a simple knot or used in combination with buckles, tools and tensioners, providing the most dependable joining systems. The strapping can be tensioned using manual or pneumatic tension tools.

### INDUSTRY APPLICATIONS

Agriculture

| Abattoirs (meat industry)

| Bale press

**QUALITY ASSURED**

# FEATURES & BENEFITS

- > Faster and safer to apply
- > Cost-effective
- > Gentle on delicate edges and surfaces
- > Dynamic load movement is absorbed by the elasticity of the strapping.
- > Can be custom printed on
- > Weatherproof and UV resistant
- > Can be joined by a simple knot or used in combination with buckles, tools and tensioners
- > Hot melt lamination provides for controlled uncoiling
- > Superior system strength when used with Narrowtex "Extra Grip" phosphate buckles

## CUSTOMISATIONS

Bonded strapping can be printed in various colours. This is often requested by our clients to indicate break strength as well as promote their brand identity.
