

steps to get the ball rolling and start your Industry 4.0 implementation journey!

First, consult with Industry 4.0 experts to get a better understanding of what the process will entail, and the costs involved.

Finally, be flexible when it comes to budgeting for an implementation – in time these solutions will pay for themselves.

Identify the areas in your current processes that will directly benefit from an Industry 4.0 solution and create KPIs for these areas to measure the success of the implementation.

Continue to measure to ensure the solution is still making an impact on process/ production.

Generate a scope of work for implementation and break it into phases, with each successful phase leading on to the next.

Educate existing staff members on the purpose of implementation and the tools needed to use the solution.

Engage Industry 4.0 experts to implement these phases and monitor changes in each area.
