

AUSTRALIA'S LEADING MANUFACTURER
OF LIQUID FILLING MACHINES

Pumptite Unit Trigger & Pump Pack Tightening

For the cap tightening of containers and bottles
requiring trigger or pump dispensing caps

Pumptite Cap Tightening Unit

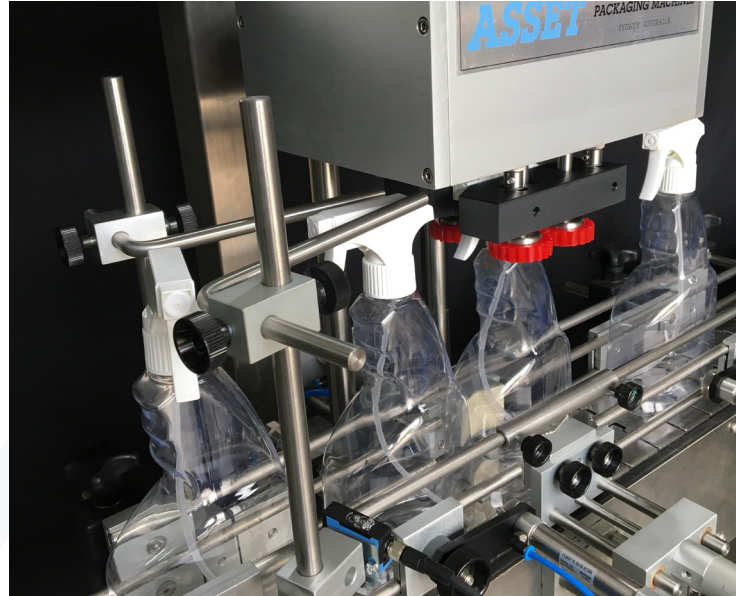

We proudly manufacture the Pumptite Unit to integrate into our AC cap tightening machines which enable you to consistently tighten trigger and pump caps of various sizes onto your containers to consistent torque settings.

Our Pumptite Unit is suitable to fit, as an additional option, onto both our semi-automatic and automatic AC models. The Pumptite can either be purchased with the initial machine configuration, or as an optional retrofit to your existing machine. The versatility of the Pumptite Unit enables you to easily interchange between standard cap tightening with the AC, and non-standard cap tightening with the Pumptite Unit. In the majority of cases, the Pumptite can be used to tighten standard caps also.

Our Pumptite Unit has an industry proven reputation for reliability, ease of setup, with a choice of tightening wheels to specifically suit your cap design. The versatility of this unit is enhanced by its interchangeable components such as tightening wheel size and material, and jaws to grip the container. The tightening wheels can be changed over, without tools, in around 2 minutes. This unit integrates with the AC adjustable height size, time delays, and torque settings enabling you to continue to meet the requirements of your products' capping needs and the standard it demands. This further facilitates the ongoing development and growth of your product lines.

Asset are the original designers of this revolutionary Pumptite Unit which is a bespoke, precision-engineered to fine tolerances, capping system that is unique to the marketplace. It's highly-specialised gearing system automatically adjusts to your caps' size and provides consistent tightening to pre-set torque adjustment.

All our product lines, our components and machines are bespoke and manufactured in-house allowing for your unique requirements to be met with the final design unique to you.

Standard Features

(In addition to AC Standard Features)

- Identical unit fits both the semi-automatic and the automatic AC machine models
- Tightens most pump cap types (e.g. trigger, plunger, spray, and cream dispensers, unusual cap types such as flip top, cone-shaped tops, in addition to most standard caps)
- Tightening wheels self-adjust to different cap diameters
- High quality air motor drive
- Quick-change fine and course rib patterned, or soft, wheels
- Self-lubricating, low maintenance guard

Specifications

Dimensions: W 180mm x D 230mm x H 105mm

Weight: (approx.) 8kg

Air pressure & consumption: no additional required above AC spec

Additional Options

- Different tightening wheel patterns & materials
- Bottle and caps guides
- Alignment jaws for special applications
