BW Integrated Systems' ITL 15 & ITL 25 Integrated Top Load Case Packers are fully automatic robotic or gantry case packers capable of top loading your product into RSC or HSC cases. A variety of pick heads are available, including vacuum, mechanical, and combination vacuum/mechanical styles to accommodate almost any product.

Both models are ideal for various case styles including tear-out display cases, HSC (available case lid attachment), and are capable of packaging cartons, tubes, pouches (flat and stand up), jars, F-style jugs, and round bottles.

ITL 15 / ITL 25 Integrated Top Load Case Packers

The ITL 15 and ITL 25 solutions feature a low, ergonomic KD case magazine, small overall footprint, and are ideal for nearly all production environments. Construction is available in dry, wash-down, or caustic wash-down options. The modular design allows for multiple infeed configurations as well as the ability to feed bliss cases or trays into the system. Case opening is securely handled with opposed vacuum cups and positive case transfer is accomplished with servo-driven side belts. Case sealing can be either standard tape or optional hot-melt closure. Tool-less changeover is completed simply and quickly with hand crank handles.

The [ITL 25](#) system includes high-speed case set-up for increased throughput capacity.
