# ePOD

Peacock Bros. *Drive Delivery*

*Drive Delivery is an electronic proof of delivery (ePOD) solution that digitalises the delivery process.*

By integrating ePOD into your delivery operation workflows, Drive Delivery provides your driver with easy to use software enabling a faster, more accurate and efficient delivery process. Drive Delivery suits small to medium transport and logistics companies and is ideal for direct to store manufacturers that operate an in-house delivery fleet. Standard functionality includes route planning and optimisation, real-time GPS vehicle tracking, integrated navigation, driver validation and compliance checks, and electronic capture of proof of delivery or pickup information.

 **ZEBRA**  **Honeywell**  **DATALOGIC™**

## STREAMLINE

The scheduling and route planning process to generate the most efficient and cost-effective driver delivery routes.

## DIGITALISE

Delivery confirmations via an industrial-grade PDA device (for example, Honeywell and Zebra PDA devices), Samsung or iPhone to capture geotags and timestamps of successful deliveries, pickups, photos, personalised delivery notes, and sign-on glass customer signatures.

## INTEGRATE

With delivery operation workflows and business systems, such as transport management systems (including Peacock Bros. warehouse management system IMS), inventory management and ERP systems.

## REDUCE

Manual and time-consuming administration processes - phone calls, emails, paper, and invoice errors.

## TRACK AND TRACE

The physical position of goods in the delivery chain and current and past locations of unique items, assets or property (for example, pallets).

## LOCAL SUPPORT

Includes regular updates, help desk & phone support to Australian and New Zealand clients.

# Flexibility. Visibility. Automation.

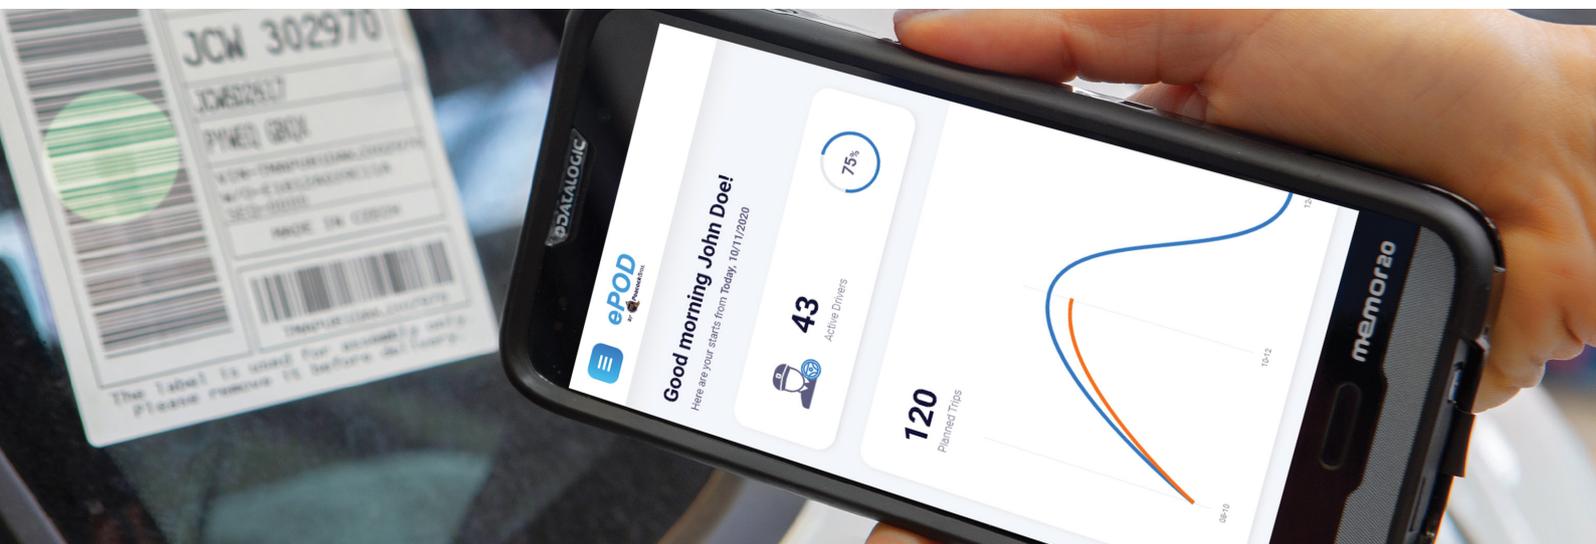

PeacockBros.

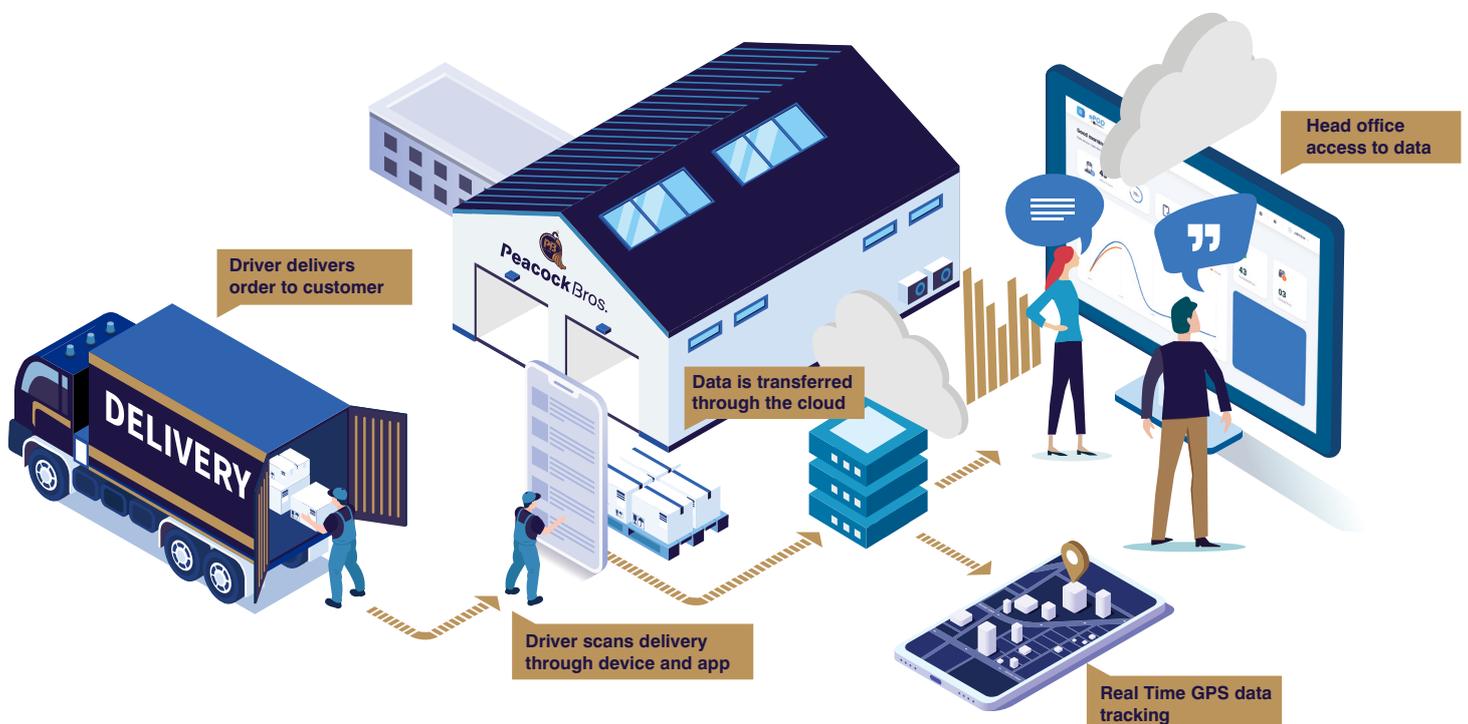

Peacock Bros. Drive Delivery is designed and built as a highly configurable ePOD solution with the flexibility to be tailored to cater for your customer's business processes and delivery requirements, such as pre-delivery notifications, delivery tracking, electronic capture of proof of delivery customer signatures and business rule-driven validation and compliance checks.

Visibility of fast, accurate and accessible real-time information for the back-end office team enables more rapid communications to drivers, increases workforce productivity, and enhanced customer interaction and service.

Automating the delivery operation workflows, scheduling and route planning, driver and customer communications, and capturing ePOD information will deliver increased workflow efficiency, improved customer service, and reduced administration effort responding to delivery tracking and proof of delivery queries.

## Delivering the perfect order

In 1888, brothers Ernest and Charles Peacock opened a small general printing business on Collins Street in Melbourne. Later that year Ernest took over the business, and in the years to follow Peacock Bros. would grow into one of the largest manufacturers and suppliers of high quality printed labels, tags and packaging solutions across Australia and New Zealand.

Today, we are an organisation at the forefront of innovation with a longevity that can be attributed to our collaborative, team-based approach to delivering solutions. Continually evolving, we have now become a market-leading provider of supply chain solutions across the region.

Australian owned and operated, we pride ourselves on going above and beyond the expectations of our 12,000+ customers. We've done it for 130+ years and counting, so what can we now do for you?
