BAG FLATTENER

A Bag Flattener is an equipment which assists in the automatic flattening of the Bags/Sacks for ease of coding and palletization. The filled Bag/Sack with uneven shape is passed in between the two conveyors at the desired height and the Bag/Sack carries a uniform flat shape at the discharge end through compaction.

The gap between the two conveyors is adjustable with the help of a hydraulic system.

The structure can be made in Stainless Steel or Mild Steel.

STANDARD FEATURES

- Customized designs to integrate in any bagging line.
- Adjustable to accommodate most bag sizes.
- Robust Construction.
- Speeds up to 20 bags per minute.
- Adjustable level for various bag thickness.
- Easy Maintenance.
