

# Everyday chaos and change

## How does your organisation manage it?

We know that the mining industry is under significant pressure to manage quality, safety and operational performance with a rapidly changing workforce.

We understand the need to manage the complexity of high risk work, often performed by a large contract workforce. Dynamic challenges faced by companies include:

- The ability to rapidly onboard large and diverse cohorts.
- Maintaining quality and safety.
- Keeping on top of constant requests and issues raised due to unforeseen situations.
- Working to ensure good on-site communication and documentation.

All while maintaining a safe, efficient and compliant operation.

### Harry is just a call away, here to help.

Ask Harry is a voice-based smart assistant. Call and speak to Harry using your phone or two-way radio. Harry uses AI technology to understand requests, lookup information or even make calls to the right people.

Call Harry to:

- Send a hazard report or convert voice-to-text. Follow-up and keep the reporting person in the loop.
- Report a defect, then optionally escalate it with a call through to the right person.
- Request critical information on a changed condition or unforeseen situation.
