Kolibri Textilefolder

Kolibri Easy.Electric.Reliable.

The new Kolibri is the most compact textile folder in the Dekken family. It is powered exclusively by electricity. A simple plug is all it takes to fold efficiently and precisely.

Increase Production

The Kolibri is built to be fast and to last. The built-in quality stepper motors ensure high-speed folding cycles. The ability to control the motors 100% gives you the possibility to create the most efficient folding programs tailored to your needs.

Flexible Packaging

The semi-automatic bagging can be turned on or off for each folding program. You choose which bag you want to use. The standard folding format allows a lot of flexibility and keeps the procurement costs low.

The Kolibri is the beginning of a new era that offers folding equipment for a wider audience.

The creation of a more accessible folding machine has been a desire in recent years. But to realize such a machine and at the same time respect the philosophy of the company to sell only reliable and durable machines was a challenge.

Fast Setup

Unpack. Plug-In. Fold. The Kolibri is easy to set up and requires no special tools or compressed air. Installation is simple. The user interface is intuitive and minimalistic, while still giving you full control.

This compact machine was engineered to last.

Built-in are high quality components including high-speed stepper motors, an industrial Controller, steel hinges and mechanisms with maintenance-free bushings, all held together by a sturdy steel frame.

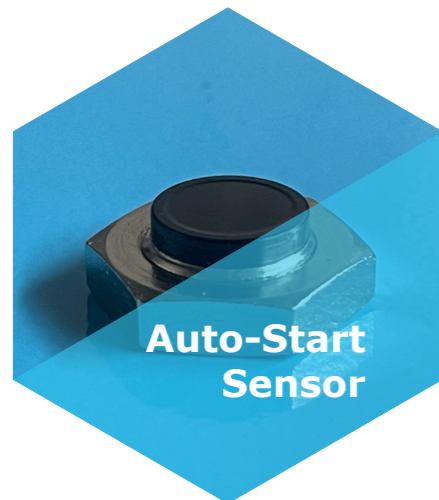

Keeping Track

Stay productive, save time normally lost in manual folding, and use it more efficiently. Keep track of your production by reviewing the built-in statistics that show you how much you've folded.

Kolibri Add-Ons

**Auto-Start
Sensor**

Automatically
start cycle when
the item is detected

**Touch
Buttons**

Fast and easy
Activation,
long lifetime

**Mobile
Stand**

Easy handling

**Bag/Card
Magazine**

Keeps the
Packaging Material
handy

Dekken Machinery

Is a leading global manufacturer of textile folding and bagging equipment. Since its foundation, the company has revolutionized the quality of modern textile folding.

Dekken Machinery has more than 30 years of experience in the design and manufacture of textile folding machines.

We develop and produce highly specialized textile machines at a reasonable price, while maintaining the high quality standards of our machines.

The maintenance costs of our machines are kept low thanks to our long experience, optimized designs and high quality components.

Our Vision

Thinking outside the box and optimizing our machinery in order to produce the most reliable folding equipment.

We want to give our customers the best possible experience and make sure they are highly satisfied with their equipment for a long time.

Our Mission

Kolibri Quick-Specs

- **Size (WxLxH): 71x98x20 cm / 28x38x8 in**
With Mobile Stand: 71x98x82 cm / 28x38x32 in
- **Weight: 50 kg / 110 lb**
- **Power Supply: 100-240 VAC**
- **Power Input (max): 500 W**
- **Folding Production (max): 600 pcs./hour**
With Packaging (max): 350 pcs./hour
- **Up to 12 custom Programs**
