BUSINESS

Lone Worker Safety

Turn any smart device into a
safety tool

About StaySafe

StaySafe is an app and cloud-based monitoring service which provides personal protection for your lone workers.

If you are responsible for employees who work alone, they could be more vulnerable to some of the top workplace safety risks.

Should an accident or incident occur, you have a legal duty of care to respond appropriately and provide an appropriate level of risk management and protection.

Our easy to use app monitors location and enables employees to check-in safely or request assistance in an emergency.

StaySafe allows you to meet your legal duty of care by monitoring safety status and reducing response time following an accident.

If an incident does occur, the app enables an employee to raise an alert, allowing you to send the help they need quickly and directly to their location.

Features

Timed Sessions

Trigger location monitoring by starting a timed-session.

Session Check-in

Check-in at set intervals to confirm safety.

Panic

Send a panic at any time when in need of assistance.

Discreet Panic

Panic out of view using the phone's power button.

Duress PIN

Enter a false pin to 'end' a session/alert when confronted.

Non-Movement Alert

Automatic alerts when a period of non-movement is detected.

Low Signal Mode

The app will continue to operate without mobile data.

Low Battery Warning

Remind an employee to charge their device.

Text & Email Notifications

Receive alert notifications via text and email.

Phone Call Notifications

Receive alerts over the phone through an automated message.

Two-way Audio

Listen in to verify an alert and communicate with the employee.

Keep an Audit Trail

Add notes on actions taken to resolve an alert.

Set Response Procedures

Save business guidelines in the Hub for monitors to refer to.

Reporting

Run and schedule session and alert reports.

SMS Broadcast

Communicate with an entire team from within the Hub.

Third Party Monitoring

Optional 24/7 monitoring and response on your behalf.

Wearable Device

The StaySafe app can be paired with the V.BTTN, a small, versatile device which can be worn discreetly and used to check-in on the app or send a discreet panic alert - all at the touch of a button.

Accessories include;

- Wrist watch
- Sticky back
- Clip
- Pendant

Satellite Device

Garmin inReach is an easy to use, cost effective satellite solution for your most remote lone workers.

Features include;

- 100% global coverage
- Accurate GPS tracking
- Timed sessions
- SOS panic alert
- Compass
- Downloadable maps
- Weather reports
- Flexible data plans

Why StaySafe?

-  Easy to use
-  Flexible & customisable
-  Always available
-  Low cost & scalable

British Standard Accredited

StaySafe is accredited to BS8484 2016, giving you the peace of mind that you are protecting your lone workers with a high quality solution that meets stringent safety standards.

Testimonials

At StaySafe, we recognise that lone worker challenges vary greatly across different businesses, locations and job roles. Fortunately, the flexibility of the StaySafe solution and customisable features, makes StaySafe suitable for use across any industry - from health and social care to housing and construction.

But don't just take it from us, see what some of our customers have to say.

“Our workers out in the field now feel reassured that they will receive help should they ever require it even in remote areas or while working out of hours. Overall, we feel that implementing StaySafe has improved our level of care to our employees while freeing up time for those previously responsible for monitoring our staff.”

Padraic Dolan, Celtic Anghian Water

“Our team can now check-in at the touch of a button. The intuitive nature of the app and hub means that StaySafe is very easy to implement and easy to pick up. It has been well embraced by our supervisors and frontline staff alike who feel safer knowing that the StaySafe solution is there.”

AJ Medwid, TransGas

“ For us, the check-in and man-down features are great as many of our employees are working in high risk areas. We know that if they suffer an accident, they may not be conscious or able to signal for help but now we can rest assured that StaySafe is able to do that for them. ”

Richard Young, Dennis Eagle

“ As a business facing a number of challenges such as low signal and out of hour operations, finding a solution that ticked all of our boxes was important. StaySafe not only did exactly that, but they were also very supportive through the set-up and implementation process - from initial enquiry to roll out. ”

Gary Summerfield, Ground Control

“ StaySafe is a great tool with lots of really useful features. If an employee panics or misses a check-in and can't be contacted, not only can we now locate which site they are working on, but also where they are on the site. We are now confident that we are able to locate our employees quickly and respond. ”

Greg Saunders, Foothills
