

Work Management for the Utilities Sector

SWIMS has been built for the utilities sector by deeply knowledgeable and experienced utilities people.

SWIMS utility work management software provides flexibility, allowing work to be done and tracked beyond the limits of a single project.

SWIMS brings together all the functions you need to manage and monitor your utility focused work from start to finish.

SWIMS keeps your resources, costs, and time frames balanced and in control

- Create and assign tasks, manage priorities, and track your team's work to stay within budgets and deadlines
- SWIMS provides a centralised place to securely store all of your documents and images and access them whenever you need to directly related to each job/task
- Use SWIMS to track work hours, create timesheets and share time reports to identify potential bottlenecks in your workflow and keep your clients informed
- Schedule out teams and see who's working on what, in real time to avoid over and under-distributing work to teams
- Create workflows to manage work in SWIMS via a series of sequential steps
- Create and send reports on time, costs, and resources to oversee progress, spot potential problems, and update your clients

Smarter tracking on the go: The simple to use mobile application module allows for on-site updates with geolocation data and photographic recording of the site throughout the entire survey, dig, install, repair and reinstatement process.

Improve productivity with real-time updates: Keeping jobs on track with so many moving parts is a huge challenge, SWIMS changes that.

SWIMS provides real-time updates on-site and at the office, allowing for fast and reliable communication.

When combined with SWIMS intuitive materials tracking and smart automations, gangs can get the job right the first time.

One Information Hub for all users: SWIMS provides a single hub of real-time information for everyone.

Identify user types, allocate authority levels for information access; data from and use of the system is only available to the level that identified users require.

The security of your data across multiple contracts, is assured with multi layered secure access according to an individual's role, built in to the environment.

Report & analyse: Reporting is integral to SWIMS, SWIMS provides a comprehensive suite of real-time and historical reporting tools and management dashboards.

Provide accurate, effective cost to value reporting and management integral for all utilities operations

SWIMS in summary

Deliver assurance, reduce risk, report and manage governance, drive compliance, enhance health and safety standards, increase delivery standards, communicate, create transparency and more with SWIMS. The UK's leading Utility Works Management Information System.

- Utility aligned workflow across multiple business functions
- Enhanced, efficient workflow in real time to gangs through the use of the SWIMS mobile app
- SWIMS is provided as a suite of applications with a secure server data store, SWIMS includes a fully integrated field mobile solution, available on Android and IOS
- Real-time data capture from jobs and other sources via the SWIMS app and SWIMS API integration capabilities
- Integrated planning, scheduling, managing, reporting capabilities
- Capturing and storing data from the field accurately with a full audit trail
- Delivery of supply chain transparency
- Security of your data across multiple contracts, within one integrated environment
- Multi layered secure access according to an individual's role
- Sophisticated and flexible reporting capabilities, are integral to SWIMS
- Real-time data intelligence, all within the system environment
- APIs fully supported and delivered to provide integration with external environments

- Sophisticated materials optimisation tools
- Integration across the ecosystem utilising open APIs for transparent and efficient data exchange processes
- Live synchronous data streaming, including, images/ photos, maps, stock, SHEQ, and vehicle and plant data
- SWIMS uses "industry standard" software, the suite is written in IIS .NET Web applications with a MS SQL Server data store
- SWIMS is delivered as Software as a Service (SaaS)

SWIMS deliver's greater efficiency, higher productivity, reduced risks, optimised costs and excellent customer service.

SWIMS deliver's the best possible levels of service at the right price, profitability goals are managed and maintained and value is delivered back to the business.
