

Introducing
our products

powering change

Our innovative SaaS platforms and products are **powering change** in the energy market.

In organisations where the movement and accuracy of data underpins critical infrastructure, strategic decision making and progress, our products are transformative.

We're supporting customers with:

Meeting net zero obligations by 2050

Smart meter roll out

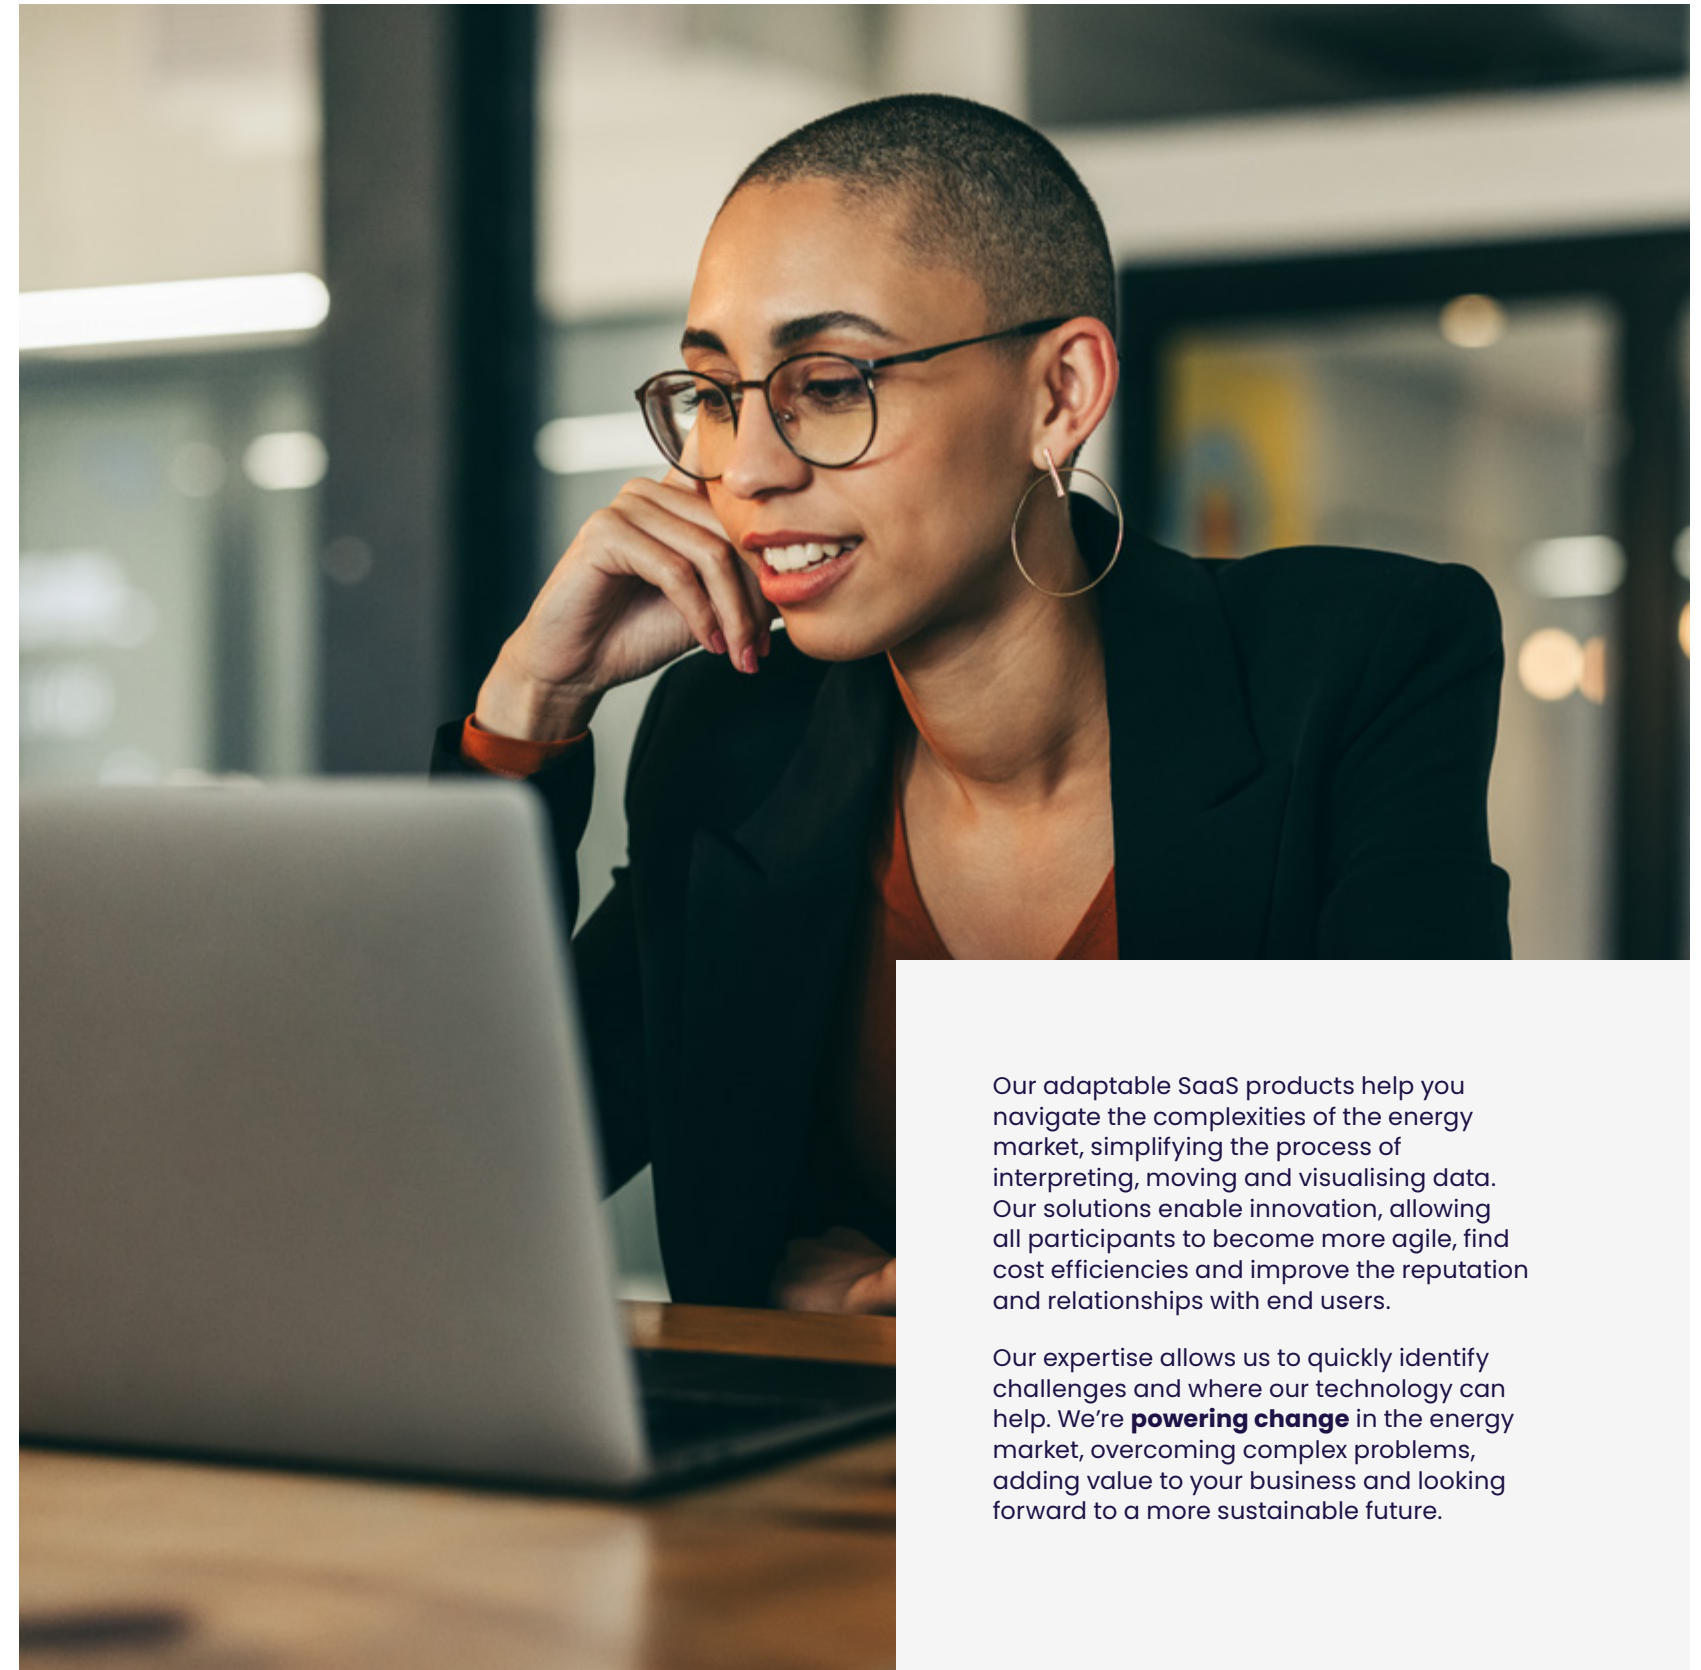

Evolving industry body obligations

Drive for renewable energy sources

Energy code evolution

Our adaptable SaaS products help you navigate the complexities of the energy market, simplifying the process of interpreting, moving and visualising data. Our solutions enable innovation, allowing all participants to become more agile, find cost efficiencies and improve the reputation and relationships with end users.

Our expertise allows us to quickly identify challenges and where our technology can help. We're **powering change** in the energy market, overcoming complex problems, adding value to your business and looking forward to a more sustainable future.

Our products make the energy market a **more accessible** place where **opportunities** can be realised and goals reached.

Software as a Service

We build subscription software products, tailored to the needs of customers, that unlock the true value of data and remove friction.

We are a technology company first, with an objective of driving industry change for a greener future.

It's that goal that shapes our strategy when it comes to investing in upcoming technologies and developing our own "from concept" products.

Our expertise allows us to identify challenges and where technology can help. Our SaaS solutions have already made a massive difference; navigating complexity, providing access to otherwise obscure data, translating and presenting multiple sources into single intuitive interface. But there are many more benefits our solutions can bring.

Our core platforms and products are categorised with three user objectives in mind:

Decide, Connect and Engage

Our **Decide** suite is designed to help you make sense of your data, to make timely and accurate strategic decisions.

Connect products link you with the rest of the industry, securely and quickly moving your data to wherever it needs to go.

Our **Engage** solutions enable human interaction with energy market data, allowing you to interrogate, cleanse, and resolve data queries between bilateral parties.

OUR CORE PLATFORMS:

Discovery
By Correla
Opportunity in reach

Meridian
By Correla
Connecting people with data

Contour
By Correla
Keeping your data in shape

Waypoint
By Correla
Guided workflows & asset management

Discovery is the leading data visualisation platform by Correla.

Discovery collates and presents complex data simply, bringing opportunity in reach. Delivering powerful insight, it informs strategic and critical decision making.

800+ users from **110+ organisations** make better decisions through using our Discovery Platform every month.

160+ million meter reads are processed every month

7.5 million API calls a month

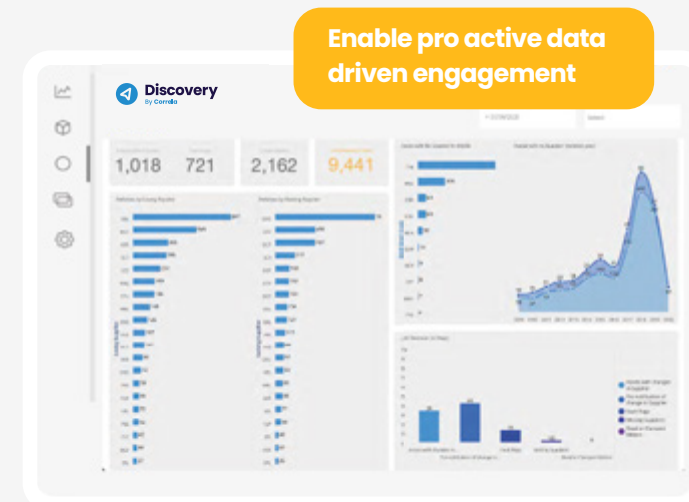

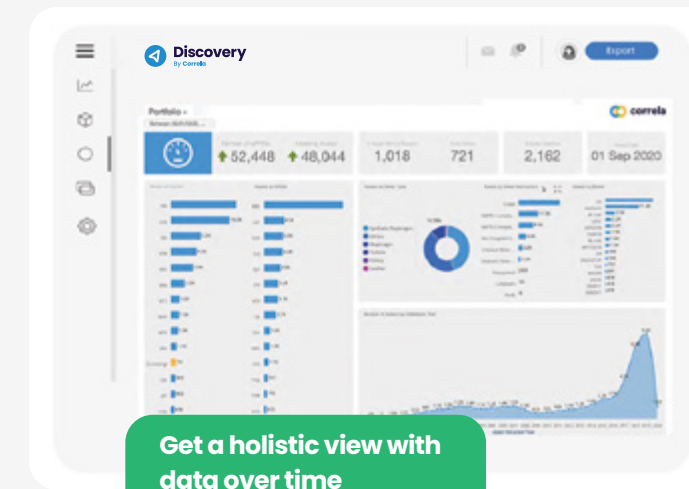

The pressure is on for organisations to respond swiftly to change. Whether that is regulatory in nature or customer driven, without the proper insight, the energy market is constantly reactive to the challenges of the day.

That is where we come in.

Discovery is our SaaS data visualisation platform that provides intuitive, interactive dashboards, removes complexity and enables customers to boost operational efficiency, meeting licence obligations with a data driven approach.

First launched in 2019, Discovery delivers on-demand access to the information necessary to report on your position, spot anomalies and respond to the needs of the market. It ensures that customers are looking at the same data-sets as the industry bodies. Allowing users to proactively discuss issues rather than providing answers based on outdated information.

You choose the features to match your objectives.

Discovery is customisable, with customers able to select the blend of features that best suits their objectives.

- + Near real-time analytics
- + Query and interpret data simply and intuitively
- + Data comparison
- + Download capability
- + Financial reporting
- + API capability for enhanced analytics and reporting
- + Easy, self-service approach through simple administration features
- + Bespoke reporting
- + Detailed KPI tracking
- + Quickly switch between high level performance indicators and low level granular data

Meridian **connects** you to the **bilateral flow** of data across the energy industry.

Meridian facilitates the consistent and accurate flow of real-time data between systems and market participants into a single secure environment. It integrates easily with existing systems, accelerates the movement of data and creates cost efficiencies through its cloud functionality.

The single reference point for multiple data sources

One central platform

Greater control and tracking

Reduced risk and reliance

Lower cost to serve

Meridian by Correla is our SaaS platform that facilitates the movement and flow of data throughout the energy sector between systems, data points and market participants.

It translates data so that it can seamlessly flow between systems, eradicating data gaps and bridging the divide between legacy systems which allows organisations to sweat existing system assets by acting as a data transfer intermediary.

Meridian delivers complete interoperability across the energy eco-system via an open framework to foster future innovation and rapid expansion. We like to think of it as the “internet for energy”– being the single point of reference for customers to receive real-time, personalised, consistent data on a self-service basis.

Meridian has been designed to address some of the most common customer pain points when it comes to managing the movement of data, access and validation. The Meridian platform is the foundation of multiple products that can transform how businesses use data to improve efficiency and simplify critical processes.

Key features

Submit all data flows seamlessly via the portal, or via the DFP API

Enables same day industry governance flow alignment

Set up bespoke data flows in minutes, not months

Reduces operational expense and shortens operational time frames, increasing security and minimising issues

Contour is our process workflow platform, that **intuitively** maps out processes while keeping **users in full control** of their data.

Contour allows users to take control of their end-to-end processes with full transparency. Users can engage with, query and update data within their own energy sector portfolio while communicating with all connected third parties in a safe, secure manner.

Contour users can engage with and manage their entire process cycle in one, centralised, secure environment. The platform identifies bottlenecks in workflows and allows users to make changes that will have a meaningful impact on day-to-day performance and overall business efficiency.

Contour is used by customers to maintain their portfolio through the ability to create, challenge and amend their data, which can then result in an amendment to their incurred industry charges.

It removes the need for significant manual input which can be prone to error, therefore reducing customer effort and frustration. Better data validation, the ability to upload supporting documents and a direct communication interface with improved MI all enable speedier query resolutions delivering an overall exceptional customer experience.

Key features

-  Easily contact multiple parties
-  Audit trail
-  Full transparency of end-to-end process flow
-  Manage workflows & workload
-  Upload multiple files/types
-  Quality reviews
-  SSO/RBAC controls per workflow, full data encryption and traceability.

Waypoint **connects** disparate systems, **validates** data and **streamlines** asset rollout.

Waypoint is the configurable SaaS platform by Correla that enables asset deployment and automates complex multi-party workflows for the whole energy market. It allows simplified ongoing management of your in-field workforce and live assets.

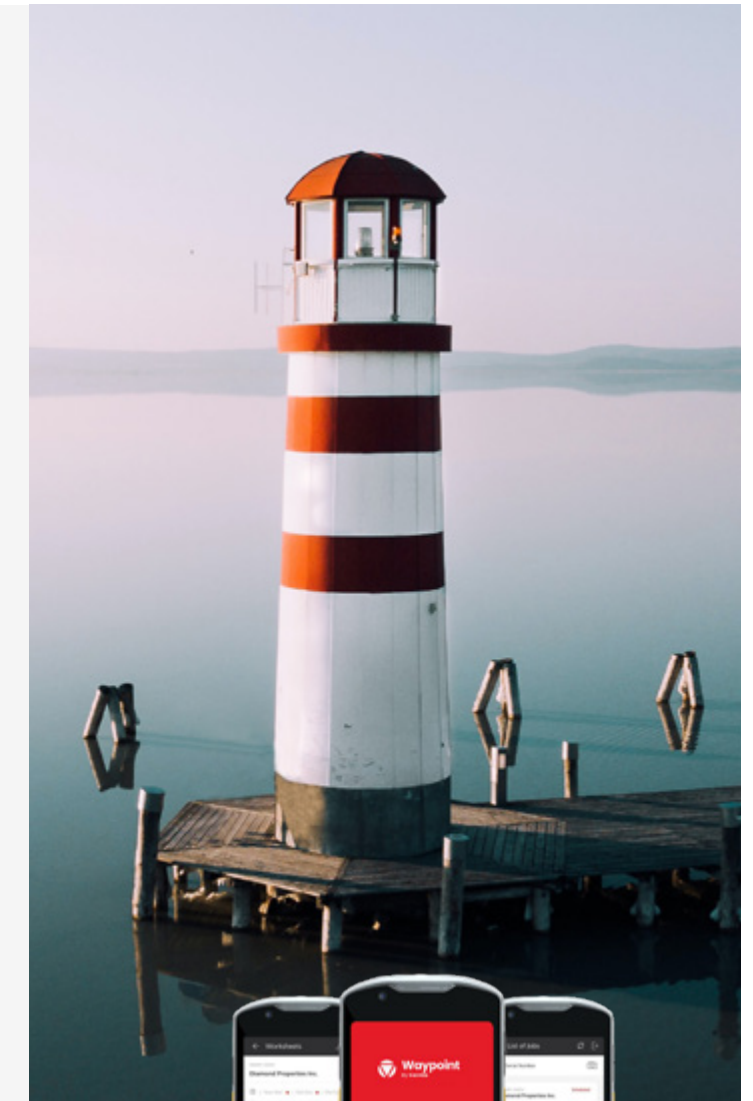

Waypoint delivers asset tracking for the whole energy industry. It can be configured to process complex multi-party workflows, whilst validating data and automating exception handling.

The platform brings numerous benefits and is supported by the Waypoint Field App to further extend its feature set and the advantages it provides.

The app connects with all supplier and installer interfaces, all workflow and job scheduling systems and any DCC adaptor to deliver 24x7 automated job processing and exception management. Smart Job worksheets can be created within the app providing detailed and tailored guidance to installers, simplifying installer training, preventing errors, and reducing installation time.

Waypoint by Correla is becoming an essential tool for the industry and like all of our platforms, products and services, we are continually developing features in response to industry changes and customer demands.

Key features

Connects disparate systems and parties for precise asset tracking

Faster, more secure roll out of assets

Integrated data validation to eliminate data errors

API integrations

Automates manageable workflows

Intuitive Field Service app helps to prevent errors and therefore revisits

Total peace of mind

Customer security and privacy are at the heart of every Correla product, by design. That focus has been a critical building block in establishing our position at the leading edge of the energy market over the last decade.

Our security operations are world class, and have been designed and scaled to support critical national infrastructure. We independently audit the cyber security maturity of our entire SaaS portfolio, where we have annually achieved NIST CMMI level 3.0. Whilst the infrastructure that many software companies base their products on like Microsoft or AWS complies with strong security standards, very few energy market SaaS providers can stand behind the entire service we can provide being NIST aligned end to end.

We hold the ISO27001 certification – a further demonstration of our commitment to delivering excellence. Correla is committed to customer

peace of mind by pro-actively building business cyber resilience, we work closely with our customers to align with their Information Security and Privacy requirements.

The comprehensive Information Security Management Systems (ISMS) we deploy ensures established frameworks are embedded right across our organisation. The combination of our heritage, product portfolio and large customer base provides a unique industry perspective, allowing us to identify and adapt to changes in regulation or new threats that may compromise customers, allowing us the opportunity to quickly adapt.

Accreditations

The power to change tomorrow starts with a conversation today.

Find out more about how our products and services are changing how the energy industry interacts with data.

Share your ambitions and let's work together to meet them.
