

INTELLIGENT NETWORK MANAGEMENT  
PREVENT WASTEWATER SPILLS, REDUCE POLLUTION  
A BETTER, GREENER WORLD FOR EVERYONE

**ART (Analytical Remote Telemetry)** is an intelligent, machine-learning and data analytics platform that forms part of a powerful data network management system. The platform helps users to proactively manage their wastewater network as it delivers full network visibility, performance and forecasting.

ART uses predictive analytics that is data-driven and automated to deliver operational intelligence at every level in a wastewater network.

The platform helps users to proactively manage their network as it delivers full network visibility.

ART intelligently senses any changing conditions, and lets users know in advance, thereby giving them the time to act.

With ART, users gain real insight to detect blockages as they form, giving utilities the time to proactively clear these and prevent spills before they happen.

ART combines wastewater level and rainfall data to provide intelligent alarms that highlight those high-risk areas within a network that allows proactive management to reduce the likelihood of potential spills.

## BENEFITS

Manage your network intelligently

Reduce operational cost

Giving users time to act

Prevent wastewater spills, prevent fines!

Meet regulatory and environmental compliance

A cleaner, greener environment

ART delivers a data analytics and insight platform to proactively manage flow in sewers, pumping stations, manholes, Combined Sewer Overflows (CSOs), detect partial sewer blockages as well as well as monitor and prevent flooding events.

Operational Intelligence

- Smart Machine Learning Data Analytics
- Detect partial sewer blockages
- Monitor and prevent flooding events using sewer level and rainfall data
- Proactively manage flow in sewers, pumping stations, manholes and CSOs

**FIND OUT MORE!**

If you would like to manage your network intelligently, get in touch to find out how **ART** can transform your network.
