

PROTAL 7300

Denso Protal 7300 applied to a gas pipe.

Description:

Denso's Protal 7300 is a VOC free, 100% solids epoxy coating specially formulated to coat dry, damp or wet surfaces in either above ground or buried locations. It is a high build liquid coating that can be applied by applicator pad, brush or roller in one coat to suitably prepared substrates. Once cured it forms a tough, impact resistant coating with excellent adhesion qualities making it a useful solution to the problem of protecting steel surfaces in difficult environments.

Use:

For the exterior coating of pipelines, structures or other steel surfaces that may be wet or damp due to the environment or as a result of atmospheric condensation.

Major Benefits:

- Can be applied to wet or damp surfaces
- High build (up to 1250 μm in one coat)
- Excellent adhesion to wet and damp surfaces
- Excellent gouge, abrasion and impact resistance
