

THIS IS JULES

We are Jules and we build revolutionary online solutions for Energy Suppliers.

WHO WE ARE

Here at Jules we build globally recognised cloud based Platforms to digitise and optimise the trading process between you and your customers. Based on efficient internal research and a consulting phase at your company, we can design, develop & introduce a bespoke Smart Energy Trading/Procurement Platform all within a minimum of 3 months. With little impact on your IT resources, we develop new possibilities for your company's business model.

We help Sales to tap into new and increasing customer segments by offering new flexible products – without waiting on backoffice. We work with energy suppliers within liberalised markets for generators, consumers, and power suppliers in the UK and across Europe. Come by to say hi during this Utilities Week or schedule a call with us!

OUR TEAM

Originating in the Netherlands, Jules has been active across Europe for over 10 years.

Our team consists of highly driven experts in their fields and have amassed a great understanding of the energy industry as a whole.

At Jules, we combine our engineering and operational talents with our market knowledge and friendly services to help you create the perfect Platform to help enhance your customer offering.

We work with you, the Energy Supplier, to build a Platform tailored to you from our extensive modules available.

HOW WE STAND OUT

Jules offers a range of products to help you, the Energy Supplier, to administer your energy contracts and meet your government obligations whilst combining this with customer self service interfacing.

Our suite of Platforms is unique in the energy industry offering an advantage when tendering for new client contracts.

Jules sits in-between you and your customer to help deliver a dynamic experience.

HOW THE PLATFORM WORKS

ENERGY SUPPLIERS

- Back-office staff can control the administration of customers
- Back-office can execute the customer's trading activities
- Adjusted to suppliers specific requirements
- Bespoke integrations
- Bespoke reporting

SMART ENERGY PLATFORM

Jules Energy offers a Cloud based, Turn-key infrastructure for the execution of B2B flexible contracts.

CUSTOMER

- Personal online log-in
- Execute transactions
- Manage positions
- View results
- Monitor assets and much more.

OUR CASES

ENGIE redesigned their back-office processes in line with their product proposition. This created the possibility for rapid and controlled growth.

Total Gas & Power was the first UK utility to embrace online transactions. With the enriched service and automation Total Gas & Power was able to accommodate new market segments and increase their trading numbers.

Flexitricity implementing the Jules Platform added energy supply services to their product range. This allowed Flexitricity to become a full-service energy & demand response supplier.
