Working at height training and rescue services

We are a leading provider of working at height training and offer a wide range of courses

including those accredited by ECITB and PASMA.

Our courses comply with all regulations and the requirements of the Work at Height Regulations 2005.

A realistic training experience

We can offer realistic, practical training in a safe environment, with specially designed training facilities which provide our clients with the most realistic scenarios possible. Internal and external ladders, hatches, roof top anchor beams, handrails, slopes, gates and a range of internal furnishing enable our training to be bespoke and cover a wide range of work applications to meet the needs of customers from all industrial sectors.

All our instructors and assessors are also operational rescue team members for working at height activities so have real life stories to make the theory come alive. They also hold nationally recognized teaching and assessing qualifications, are experts in the subject matter and passionate about what they teach.

Tailored training and rescue

As no single solution is fit for all working at height situations, we offer bespoke courses, designed and developed with you to meet your specific needs. Always with safety, quality and professionalism at the forefront of our minds.

This includes consultancy to develop solutions for all your working at height problems.

We also offer rescue training in order to ensure you have the skills needed to assess and plan a rescue, make the casualty safe and remove them from the area using suitable rescue equipment and safe rescue techniques.
